BUY A BANANA. SAVE A BUNCH.

Meet the Banana™, the very tough, versatile, portable, and reliable dot-matrix printer from Gorilla™.

At \$249.95 retail it's an ideal and inexpensive companion for personal computers like Apple® (or Apple "look alikes" such as Franklin® or Albert®), TI®, Commodore®, TRS-80®, Kaypro®, Timex®, Osborne®, etc.

After that, it's merely comparable to other printers that can cost up to three times as much: 10" carriages (to handle standard 9½" paper), 80 columns, graphics capability, 10 characters per inch (expandable to 5 cpi) draft-quality print (for perfectly acceptable form letters, data processing,

business reports, etc.) tractor feed (for precise alignment and quick loading), parallel or serial interface (take your pick), self-inking ribbon cassette (for long life and easy installation), 10 portable pounds in weight, and compatibility with so many of the most popular personal computers on the market.

Plus its printhead features a unique single-hammer design that eliminates a lot of moving parts, to eliminate a lot of annoying repairs.

That's the Banana: silly name, serious service. It's everything the expensive dot-matrix printers are . . .

Except expensive.

**JOB-IN-PROGRESS \$125.00**

Lists all equipment for a complete job, tracks when ordered, P.O. numbers, when required at shop, when received, when required to job, and when invoiced. Tracks shop labor, engineering, travel, per diem, and freight expenses. Features a complete cost accounting versus estimated cost. Includes simple sort routine that sorts by manufacture and part number.

JOBS-IN-PROGRESS SUMMARY \$25.00

Prints out compiled reports of all Jobs in Progress, Profit tracking, Work in process figures, Backlog, Estimated profit and more. Used in conjunction with Job-In-Progress.

BID CALCULATION \$100.00

Lists all items on a bid including equipment, labor, engineering, travel, per diem, and freight. Change labor rates, engineering rates, per diem, travel, freight and percentages of profit on summary worksheet. Also, prints three different options for customer-ready quotations.

SOUND SYSTEM ENGINEERING \$75.00

Calculate sound system parameters based on room constants. Calculates room volume, surface area, reverb time, EAD, critical distance, and much more.

All programs are User Friendly and include complete instruction. Even includes step by step instructions for customizing. All programs are written in MBasic*. Formatted for the Osborne and the Xerox 820***, 5½ and 8 inch disks.

Write for free Brochure.

DBPlus™

SORT, COMPRESS, and TRANSFORM dBASE II™ DATA FILES

If you are serious about dBASE II™ you need DBPlus. This program runs outside of dBASE II™ and performs the following important functions on dBASE II™ data files:

- Sort
- Compress/Decompress
- Transform

DBPlus™ is designed to free you from the chore of typing or memorizing a new language. In most cases all you have to do is move the cursor to the next menu item and press return!

SORT

DBPlus™ can sort a data file up to 15 times faster than dBASE II™ on a single field; 32 fields may be sorted in a single pass and each additional field requires 1% more sorting time.

Available from: Software Distributors 1-800-421-0814
France: La Commande Electronique
5 Villa Des Entrepreneurs
75015 Paris, France
Tel: (1) 577.31.82

Software Wholesalers 1-800-633-2552
Japan: JSE Int'l
9F Toyo Bldg. 6-12-20 Jingmae
Shibuya-ku Tokyo, Japan 150
Tel: (03) 486-7151

Available in popular formats (coming soon—IBM P.C.)

COMPRESS/DECOMPRESS

A copy of any dBASE II™ data file can be produced which is only 30% to 40% of the original size.

The compressed file will save you transmission time and phone costs when you send a data file over a modem.

Making backup copies of large data files can use up many floppy disks. Compressed files will save you space in archival storage.

TRANSFORM

You can now modify the structure of any data file by adding, deleting, and modifying fields without any programming knowledge.

DBPlus™ can also create a new file which is compatible with WordStar/MailMerge™.

Now retailing for \$125.

Manual and demo disk may be purchased separately.

Dealer and distributor inquiries invited!

DO MORE WITH A TRANTOR HARD DISK AT THE OFFICE!

You've made the most of your Osborne 1 in the field. You already have a jump on the competition. Now, get more of a jump — at the office — with your Trantor Hard Disk.

The Trantor TSL-5, 10, and 15 MB Hard Disk Storage Units give you 50-150 times the storage capacity of floppies, and 3-5 times faster system performance.

Right at your office.
Right at your fingertips.

Just think — you can:

- Easily run interacting programs such as word processing and spelling checkers.
- Write procedures to chain programs and leave the computer to run unattended.

Installation is easy, and is done once. Unpack your disk, plug it into the IEEE-488 port, and run a simple 10 minute installation procedure.

5 MB, 10 MB and 15 MB Available

Controlling software piracy

Software piracy has surfaced as one of the critical problems facing the microcomputer industry. In an effort to kick off a dialogue on this elusive problem, a panel of industry experts, including Dr. Adam Osborne, gathered at the National Computer Conference in May to take a hard look at possible solutions.

Individual panelists blamed everyone from the courts to user groups (many of whom "require new members to hand over their software for copying" prior to admittance to their clubs, according to Wayne Green of Wayne Green publications). A number of diverse solutions were offered, running the gamut from rewording end user license agreements, to passing a law that would require installation of some sort of hardware device at the manufacturing stage that would discourage piracy and protect software vendors.

"If you think you're going to solve piracy with an altruistic solution, you're dead wrong," Adam Osborne said. "The problem is that we're all thieves."

Dr. Osborne was the key proponent of a law regulating hardware manufacturers, insisting that any voluntary solution would prove fruitless. "It's just like anti-pollution regulations: if they had been voluntary, many people wouldn't have done it and the people who did do it would have been at an economic disadvantage."

One panelist offered a slide presentation of one type of hardware modification that would make it difficult, if not impossible, to copy software. Other solutions offered included offering site licensing fees to software rental libraries and school districts. By paying full price for the first package and a lower price for additional copies, it was argued that the large customer can be discouraged from wholesale copying.

One expert defined the vexing problems encountered with the legal community. Of the 450,000 attorneys in the U.S., only 700 attended a recent conference on computer law. He stressed that this lack of interest and knowledge also extends to the courts, where it's hard enough to educate a judge on what a floppy disk is let alone win a piracy case. In addition, cases of law are decided on the basis of precedent and prior related cases—few of which exist in the infant area of computer law.

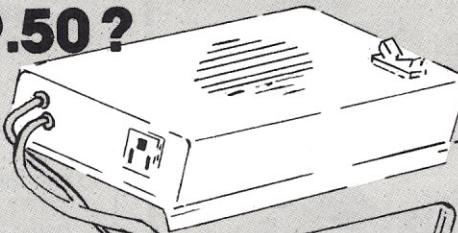

A gent in the audience came up with my favorite solution. He insisted that the best approach would be to make software pricing more competitive. The argument was that by charging a lower price for the software and supplying adequate documentation, most people would choose to fork over the dollars rather than pinch off their friends. This coupled with access to upgrades (at fees that enable vendors to stay in business) could be incentive enough to curb the tendency to pirate.

It's a necessary debate and the open dialogue is critical to its eventual solution. Certainly, we as users need to consider our role in this serious industry problem. Do user groups take adequate action to stem piracy? Do we as individuals consider the long term costs when we offer a friend a free copy of a piece of software? I'd like to hear your solutions to a problem that affects all of us, both ethically and financially.

Letters

Details, Details

"Auto Starting" by Doug Hurst (Feb/Mar 83) is good, but a few details can be added.

If the new file name exceeds four characters, the preceding number must be increased.

It is possible to combine a COM file and a user file in this call. I have changed the name of MBASIC to MB and AUTOST calls to MB ZACCT to load BASIC and run my accounting program.

It is better to avoid using more than eight characters as this requires further changes.

The SAVE 10 instruction will create AUTOST requiring 3K disk space; the program requires only SAVE 8. It can be shortened by deleting the logo to store with SAVE 4 and use 1K space. Change as follows:

11D 11 becomes C3

11E 74 becomes 2F

11F 01 unchanged

This jumps over the logo instructions.

It should be noted that versions of AUTOST are not necessarily identical. The locations of particular instructions differ slightly on some of my disks.

The multi-use disk (John Gaudio, p. 56) can also be further improved:

Key 9: SETUP<cr><cr>MF<cr>
M^CWS<cr>

Key 8: SETUP<cr><cr>MF<cr>
M<cr>

This switches in or out of WordStar with a single keystroke.

Jack H. Wyatt
Sacramento, CA

Ozzie Nightingale

This letter is to share with you how my Osborne served in the recent emergency in Huntington Beach with the flooding and resulting

evacuation of residents from their homes.

The police and fire departments had evacuated residents from low-lying areas to the local high school to be assisted by the Red Cross. Red Cross volunteers were hastily taking down names and addresses as people came in, and for those who went on to homes of friends or family or to those who opened their homes. This information was for the police and Red Cross in the event that some other person was trying to locate the evacuees.

Fortunately I was not affected by the flooding but went to the nearby high school to locate a distant relative. I saw the scattered name cards on the table and realized that some kind of order needed to be made. The police and fire departments needed the information organized alphabetically as quickly as possible for use at their switchboards. It was quickly evident that the Osborne could solve the problem. I picked up my Osborne from home, borrowed a small printer from a nearby computer store, and spent the rest of the evening inputting the necessary information, using dBASE II. Print-out copies went to police and fire departments, as well as to the Red Cross.

Several young Red Cross volunteers from the high school wanted to spell me off on the inputting task. Others stood by curious and fascinated at what the Osborne could do. It can be utilized so easily and promptly when any such emergency

Powerful CP/M Software.

For Apple, Osborne®, Xerox, Kaypro, North Star, SuperBrain, Heath/Zenith, and others.

Now only **\$29.95**

NEVADA

COBOL

was \$199.95 now only **\$29.95**.

When we introduced Nevada COBOL in 1979, it was loaded with innovations. Today's Edition 2 is even better!

- Extremely Compact. You can compile and execute up to 2500 statements in 32K RAM, 4000 statements in 48K, etc.
- It's based upon the ANSI-74 standards with level 2 features such as compound conditionals and full CALL CANCEL.
- You can distribute your object programs royalty FREE!
- You get a diskette, 153-page manual with lots of examples and 16 complete COBOL source code programs.

Also available: COBOL Application Packages, Book 1 \$9.95

NEVADA

PILOT

was \$149.95 now only **\$29.95**.

- Perfect for industrial training, office training, drill and testing, virtually all programmed instruction, word puzzle games, and data entry facilitated by prompts.
- John Starkweather, Ph.D., the inventor of the PILOT language, has added many new features to Nevada PILOT. There are commands to drive optional equipment such as Video Tape Recorders. There's a built-in full-screen text editor, and much more.
- Meets all PILOT-73 standards for full compatibility with older versions.
- You get a diskette, 114-page manual and ten useful sample programs.

See Review in *Microcomputing*, January 1983, page 158.

NEVADA

FORTRAN

was \$199.95 now only **\$29.95**.

- Based on ANSI-66 standards with some 1977 level features.
- IF . . . THEN . . . ELSE constructs.
- A very nice TRACE style debugging.
- 150 English language error messages.
- You get a diskette, 174 pages of Documentation and five sample programs. Requires 48K RAM.

NEVADA

EDIT

was \$119.95 now only **\$29.95**.

- High quality text editing for micros!
- A character-oriented full-screen video display text editor designed specifically to create COBOL, BASIC and FORTRAN programs.
- Completely customizable tab stops, default file type, keyboard control key layout and CRT by menu selection.
- The diskette comes with an easy to read manual.

To make our software available to even more micro users, we've slashed our prices. What's more, we're offering a money back guarantee. If for any reason you're not completely satisfied, just return the package—in good condition with the sealed diskette unopened—with 30 days and we'll refund your money completely.

This is a limited time offer, so order yours today!

Shipping/handling fees. Add \$4.00 for first package and \$2.00 each additional package. OVERSEAS Add \$15.00 for first package and \$5.00 each additional package. Checks must be in U.S. funds and drawn on a U.S. bank!

The professional, high-resolution graphics package at a friendly, affordable price!

Creating professional bar charts, line graphs, scatterplots and pie charts on your screen and printer is a snap with GRAFIKS 2.0 by Robonics. And at only \$125, it just may be the friendliest software package you'll ever own!

Labeling your graph is as easy as moving the cursor to the desired location and typing the labels in. You can generate graphic information from CBASIC, SUPERCALC, MBASIC, WORDSTAR and DBASE II files. Then you can proof it on the screen and print it for posterity, quickly and easily.

Amazing Flexibility!

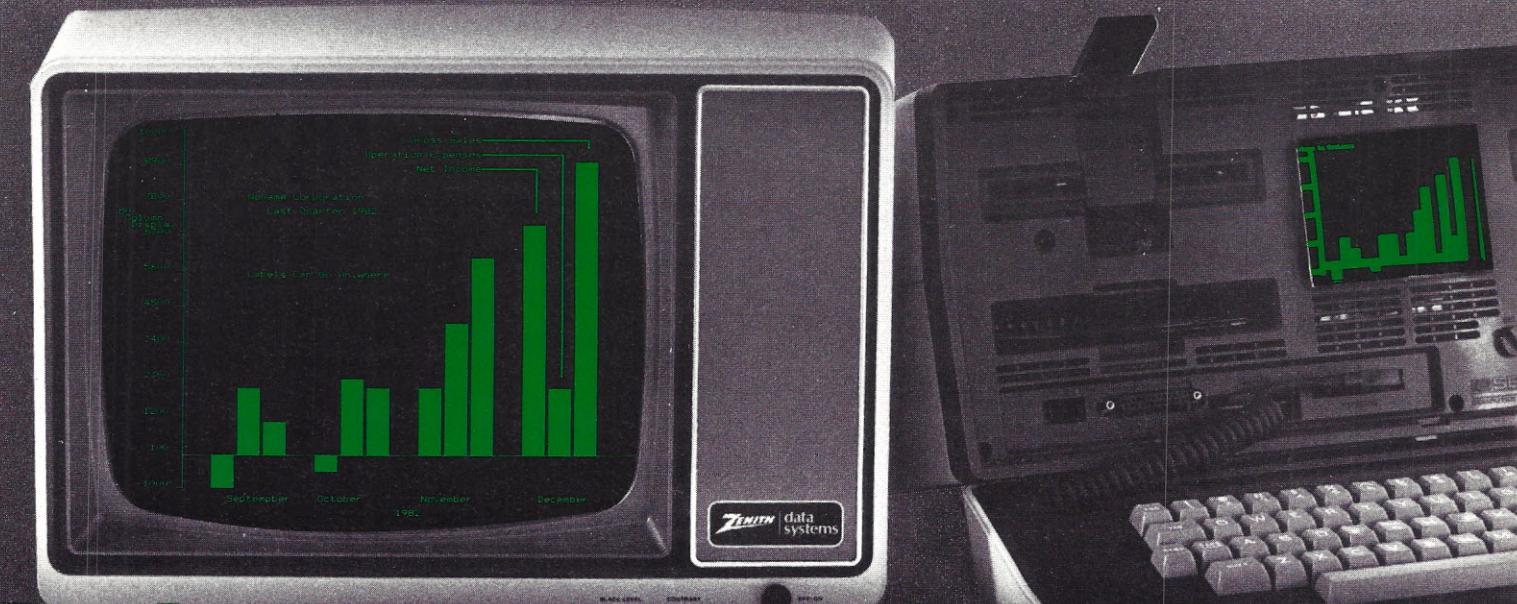

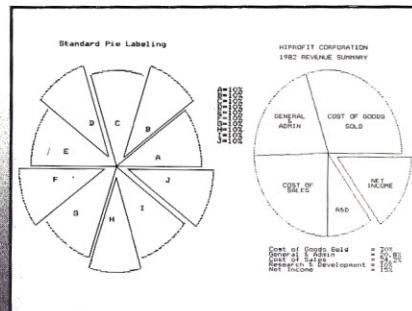

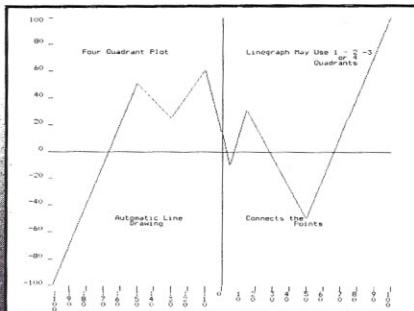

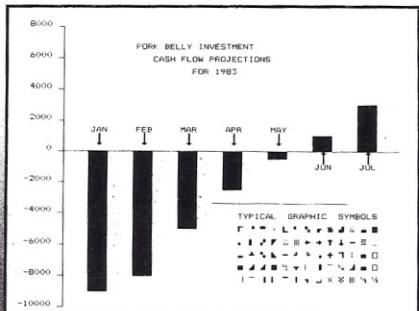

- You can vary the size of pie charts, printing two or three per sheet, while selecting and exploding important slices.
- Within charts, bars can be clustered together, or spaced evenly across the page.

- You can plot separate points, or automatically draw lines to connect the points.
- You can overlay charts and graphs on the same printout.
- Pie location can be controlled on the page.
- Print on 8½" x 11" or expanded 15" paper.

Professional, Down-to-Business Features!

- Bar graphs, pie charts, line graphs, scatter plots, freeform labelling, superimposed graphics, autoscaling.
- Capable of supporting many popular dot matrix printers, including Epson, NEC, Oki-data, IDS and C.Itoh.
- Capability to interactively create and edit graphics on the CRT.
- Automatically plots mathematical equations.
- User-friendly menus..

High Resolution You Asked For It...You Got It!

arises. I will be more alert to be available in such emergencies.

Lucille Owens
Huntington Beach, CA

Covering contingencies

I read the article titled "The Osborne Modem" in the Dec/Jan issue with great interest. Your COMM-PAC looks like an exceptional value. However, there are two items that should have been brought up.

The per-hour cost of using The Source, and The Source's minimum monthly billing. You should also note that the subscriber must have a major credit card to be billed against. As far as I know, The Source does not bill direct. (I gave up my subscription because the rates got too high.)

A large number of Osborne users will be using their computers from motel rooms, but I didn't see any mention in the article of uses when there is no direct-dial capability. The vast majority of my calls are long-distance, on a credit card. Because of that, I need voice communication for a small portion of the card (to give the operator my card number).

I realize it would be impractical to design your equipment to cover all contingencies. It would, however, be a good idea to tell prospective buyers about any additional or hidden costs associated with subscriber services like The Source.

Dennis G. Lieburn
Racine, WI

Mr. Lieburn's direct-dial question is addressed in this issue's Wizard of Osborne column.—Editor.

Bugs and masochism

dBASE II has some bugs (er... undocumented features) that might interest some of the readers of your great magazine.

The text editor sometimes doesn't update the file being modified, even when editing is properly terminated with a ^W. Use of the text editor has also been known to modify data files that were not being edited. Unless masochism is your preference, life will be more serene if you use WordStar's non-document mode to edit and modify your non-data files.

The REPORT function will

sometimes list a record, even when the .dbf file it is listing is actually empty. You should be able to circumvent this "feature" by making the report conditional; i.e., REPORT FORM FormName for # </> 0.

Ashton-Tate is aware of these problems and others. I am told they are in the process of preparing a new release of dBASE II that will correct these problems. No telling when the fixes will trickle down to we customers. Pardon the cynicism. I am irked that people sell programs with significant flaws, and do not warn me about those flaws, when they know they exist. Identifying these "features" has cost me a lot of time. Interpret that as money.

Walter E. Lersch
Portland, OR

Almost ducky

Thank you for the wonderful presentation of the article. However, in printing "DUCK!" in the Apr/May 83 edition of the *Companion*, the Remark statements were omitted from the listing of the program. Although this improves the speed of the program, one REM statement was important for its proper functioning.

It specifies that line 1170 has 13 spaces between the quotation marks at the end of the line. The symptom that would result if this were not correct would be that ducks shot on the right side of the screen would not disappear.

Peter H. Kelly
Alexandria, VA

PIP squeaks

Thank you for sending the copy of the *Portable Companion* reprinting the piece on PIP and WordStar I did for the local CFOG newsletter. Unfortunately, the same drastic error crept into it that crept into the reprints of a couple of other newsletters: the all-important CP/M = (equals) sign is missing from the commands, and replaced by an extra and unwanted comma. The commands should read in the first instance:

PIP B:WHOLE.DOC=B:BEGIN.
DOC,B:MIDDLE.DOC,B:END.
DOC(cr)

and in the second instance:
B:WHOLE.DOC=A:BEGIN.
DOC,B:MIDDLE.DOC,A:END.
DOC(cr)

"Wiz-kids" win

To the "Wiz-Kids" at the *Portable Companion* I say, "May your heads never run out of track!" Y'all seem to stay one step ahead of the game with your mag and I'm ecstatic due to the doubling of your issues in the coming year.

I'm a programmer by trade and I use my Osborne 1 for research, but I love to wow my friends with games and graphics. Keep 'em coming from that mag with class.

So I raise by bubbly to you folks, for now I'm in the mode to byte my boards and tickle the keys. Just praise.

L. L. Hartlep
Corpus Christi, TX

P.S.: I have had no major bug problems with the listings I've copied.

Typeset connection

Barbara Elman's article, "The Word Processing/Typeset Connection" (*The Processed Word*, Feb/Mar) was an excellent introduction to typesetting, an industry that has been changing almost as quickly as computers.

We successfully installed an Osborne/Compuwriter I interface seven months ago, and, unbeknownst to Ms. Elman, have been providing a direct-from-disk typesetting service to other Osborne users since then. WordStar is used without justification or hyphenation and "slash codes" delimit paragraphs, titles, bold face, italics and so on.

Mastercraft Typesetters
Eugene, OR

Twisted twisters

Several typesetting errors crept into my article "MBASIC Brain Twisters Solved" in the June issue. Under the sections Direct Cursor Addressing and Mysterious Linefeeds or Garbage Characters the function DEF FNC\$(X,Y) should

REAL ESTATE OVERLAYS FOR SUPERCALC™

COMPLETE SENSITIVITY ANALYSIS FOR INCOME-PRODUCING PROPERTY

* Analyze after-tax cash flows and sale proceeds. Automatic computation of annual debt service, annual interest, mortgage payoffs, depreciation, NOI, adjusted basis at sale, capital gain, recapture, costs of sale, federal tax, internal rate of return and much more.

* Create detailed income-and-expense pro-formas, loan amortization schedules and mortgage payment tables.

Five templates on Osborne® format, \$110.00. Other formats available.
Please add \$3.00 for shipping. CT residents add 7½% tax.

NEW: COMMERCIAL/INDUSTRIAL/DEVELOPMENT APPLICATIONS FOR SUPERCALC™

* Create complete Project Cost Analysis. Evaluate land, architectural, financing, construction, development and lease-up costs for a commercial-industrial project. Even work in reverse and determine the gross rent needed to make the project yield a given rate of return.

* Evaluate expenses by square foot; track and analyze leases.

Four templates on Osborne® format, \$110.00. Other formats available.
MC/VISA accepted

COMING SOON: BUSINESS AND FINANCIAL OVERLAYS FOR SUPERCALC™

Osborne Computer Corporation

Lost and found

As a longtime user of Spellguard, let me clear up one quick point raised in Barbara Ellman's review of spelling checker programs (June '83).

She complained about having to enter the Find command ^QF* over and over again when working through her WordStar file looking for Spellguard's error flags. (The asterisk is the "flag" character Spellguard inserts to mark the location of the error in the text.)

She's forgotten her WordStar: after using ^QF the first time, use the Repeat Find command ^L. This automatically repeats the most recent Find or Find & Replace command you issued. Not only is it easier than entering ^Q* each time, but it's a lot faster too.

Michael McCarthy
Senior Technical Writer
OCC

Unsuccessful NEC-ing

My efforts to patch WordStar for NEC Spinwriters as described in the "I/O I/O, It's Off to Work We Go" article in the April/May issue have been unsuccessful. I'm using a NEC 3510.

Your consideration and cooperation in providing the correct information will be greatly appreciated.

Gary Klaawitter
Houston, Texas

Brad Baldwin, technical editor, replies: For NEC 3515, 7715 and 7725 models use WordStar's Diablo 1610/1620 printer driver. For NEC 3510, 7710 and 7720 models specify the NEC 5510/5520 printer driver. Altering PSINIT is not necessary. (These drivers provide bi-directional printing, true super/subscripting, and incremental vertical/horizontal spacing.)

My incomplete information came about because I tested the patches with NEC 3515 and 7715 printers and assumed (never assume anything!) that they would work with all NEC models. Follow-up research has shown that NEC printers come in both Diablo-compatible and NEC-compatible versions as indicated above. I apologize for the error.

OOPS!

In the June issue, we listed the incorrect address for Ruff Software's SuperGraphics and SuperGraphics Mate software packages. The correct address is:

Ruff Software, Inc.
P.O. Box 98
Plant City, FL 33566

SuperGraphics created graphic designs on the Osborne 1 for entertainment and business applications, while SuperGraphics Mate produces hard copy print of the design on Epson Graftax Plus printers. Ruff has since added several new features including: 50, 80, 104 column widths; file overlays (superimposes one design over another); and a unique dBase II command file generator that creates screen graphics displays for dBase programs. Call (813) 681-0194 for further details and product updates.

Realities of the Marketplace

The West Coast Computer Faire in San Francisco still has the flavor of computer fairs from the early days. There are still booths piled high with a conglomeration of hardware and software being sold at aggressively discounted prices. Also, this is the computer exposition where you still see characters you thought disappeared five years ago, but there they are, wandering around with long, unkempt hair and ill-fitting T-shirts. No NCC crowd wants this. And yet, even at the West Coast Computer Faire, these people are now a tiny minority. The microcomputer industry has grown and prospered because the middle-American worker is now buying microcomputers to use in the workplace. And these are the people asking the age old questions:

1. "Given the welter of products and options, what do I buy?"
2. "And once I have a computer, who will help me learn to use it?"
3. "And if it breaks, how will I get it fixed?"

Nothing seems to change. These are probably the same questions people asked before buying television sets in the 50's or mechanical adding machines at some earlier point in time. And yet when it comes

to microcomputers, answers are not as hard to find as would appear. Why? Because you do not buy a microcomputer from a manufacturer. You buy it from a retail store, a dealer or office equipment distributor. This may seem to be a self-evident and inconsequential observation, but it has some repercussions that are not obvious. From one of these outlets you will buy only that which they carry.

Yes, there are probably hundreds of microcomputers that have been announced and certainly there are thousands of software packages in the pages of magazines. But how many of these products are really useful? If you believed everything announced in magazines the problem of choosing a product would be difficult, but go into a computer store and see how many are actually available. The answer? Very few.

And even of those that are available, just a handful of microcomputers are carried by the top flight dealers, the ones who know how to support their customers and the only dealers with whom you should be dealing. IBM, Apple and Osborne. These are the brands that you will see again and again in the windows of the top quality dealer showrooms. Computer stores that

cannot carry these brands will take knock-offs or copies instead. The hardware by decision is not so difficult after all. You choose a dealer with whom you are comfortable and that limits you to the brands which that dealer carries.

Are you short-changing yourself by so limiting your computer choices? Indeed no. The truth of the matter is that most microcomputer are adequate for most people's needs if you simply look at the microcomputer as advertised. The problems you will encounter are all associated with after sales service and support. That is why it is so important to establish a good relationship with your dealer. Will your dealer service your product for you? Believe it or not, there are still some microcomputer manufacturers (one of whom sells quite a lot of microcomputers) who expect customers to ship their microcomputer back to the factory any time a repair is required.

Having established a relationship with the dealer, the software problem is also largely resolved for you. Either the software you need is bundled with the microcomputer (as in our case) or the dealer has made the choices for you. If you want a tax package for example, a dealer is unlikely to wave his arm at 200 packages spread across a wall. The dealer will have decided which package he wishes to carry and that is the obvious choice for you.

Once you walk out of a dealer showroom with your computer under your arm, there are other places besides the dealer's showroom where you can get help learning how to effectively use your microcomputer. Perhaps the most important place to go is your local user group. User groups are enormously effective self-help groups. In most user groups you will find a core of truly knowledgeable people who frequently know more about the microcomputer than the manufacturer. These are the true enthusiasts, rather than the general user, and their enthusiasm extends all the way to helping other people learn what they have discovered. Your first step after buying a microcomputer should therefore be to attend the next meeting of your local user group.

PRESENTS

PERSONAL FINANCE SYSTEM:

One of the most complete financial management packages available. Keeps track of all tax deductible items, bank deposits, monthly charges, cash payments and more.

Personal Finance System automatically deducts check fees, gives complete financial summaries for any category on a per item, monthly or yearly basis, prints results in detail or summary form, and even plots results on a monthly bar graph. Available on diskette/disk only.

Price \$39.95 (diskette); \$42.45 (disk).

BRIDGE MASTER™

After years of success with BRIDGE 2.0, we have decided to not simply upgrade this popular card program, but to totally rewrite it! the result is BRIDGE MASTER, the best overall bridge package available.

BRIDGE MASTER *BIDS* according to the Goren point count system. It *PLAYS* following the conventions. It *SCORES* according to the rules of duplicate bridge. BRIDGE MASTER's features include continuous display of the bid and score during play, attractive screen display, score keeping and analysis, 1,000,000 different hands, and more!

BRIDGE MASTER has received rave reviews and an "A" for value (The Book of Atari Software 1983).

Available on diskette only. Requires 48K.

Price: \$29.95 (diskette); \$32.45 (disk)

Xerox Service Centers. The personal computer back-up system you've been looking for.

Unfortunately, most people find out the hard way that there's one question even a personal computer can't answer.

Where can you take it for service?

We have a suggestion. Come to one of our

new Xerox Service Centers. We have 82 nationwide. And we're multiplying faster than software programs.

Right now we're equipped to handle Osborne® Computers, Epson™ MX Series Printers, Pied Piper™ Computers, Morrow Designs Micro Decision™ Computers, Corona Data Systems Computers, Enter Sweet Pea™ Color Plotters, Cameo Electronics Winchester Disk Drives, Okidata Microline™ and Pace-mark,™ and Amdek™ products. In addition to a number of Xerox products like the 820 Personal Computer and Diablo™ Printers. But in the future, we'll be servicing even more brands of personal computers and related items.

Our service people have to undergo one of the toughest training programs in the industry. Including plenty of

hands-on experience and intensive study of computer technology.

Then we put them through the specialized courses on other brands.

We've even provided a back-up system to our back-up system with a nationwide "hot line" to our Xerox Technical Support Centers. So in the unlikely event your bugaboo baffles our local whiz, there's extra help close at hand.

And we keep our parts departments well stocked. Which means your problem can be fixed a lot faster than you'd imagine.

But one of the best things about bringing* your equipment to us is that you get Xerox quality service at a very affordable price.

So come in and see us. Or contact the Xerox Five Star Service Dealer in your area for more information.

Because 82 new Xerox Service Centers are not only a nice step forward for us. They're a great system for you to fall back on.

Visa, MasterCard and American Express Cards accepted.

*Pick-up and delivery available.

Every Executive Needs an Organizer Like T.I.M.®

Your valuable business information needs to be organized. T.I.M. can do it easily and quickly on your Osborne I. As the executive's data base management system, T.I.M. makes it easy for you to assemble all your information so it can be ordered, changed or retrieved and then printed to suit a variety of circumstances. From phone lists through complex sales reports, T.I.M.

helps you put it all together using plain English commands — no programmerese to confuse you. Plus T.I.M. interfaces with all of the most popular word processing systems as well as powerful tools like Supercalc®... T.I.M. is the executive's solution that's simple to use, easy to learn and pays off in bottom line efficiency for you and your organization. For more

information see your local Osborne ® dealer or contact Innovative Software for the name of the T.I.M. dealer nearest you.

developers of
practical
businessware for
Osborne Personal
Computers.

T.I.M. III is sold at Computerland, Sears Business Centers, Xerox Stores, Computer Marts, Entre' Stores, Compu Shops and other independent dealers.

The Wizard

SuperUsers

Brad Baldwin

Our first experiences with using a computer could be equated to that of playing an adventure game. At every turn there are new challenges, hidden pathways, and mysterious gremlins. Mistakes or incorrect decisions are part of the game learning experience and prove just as educational as making the right decision. Sometimes it's frustrating, often irritating, but successfully completing the game is always rewarding. Unfortunately, some never make it.

As technical editor and former Osborne technical correspondent, I've responded to a few letters from discouraged and frustrated users. Some of the frustration comes from wanting to immediately conquer the computer without going through normal learning curves. Hurdles are often treated as impenetrable barricades impeding all progress and further development. The inevitable angry letter quickly follows: "I'm OK, but you're not. Why don't you write documentation that is understandable, design software that can be used by human beings, build a computer that does what I'm thinking..." and so on.

Overnight expertise is not realistic, or even obtainable. A college course might take ten weeks to complete; why should developing expert programming techniques come any sooner? There is also the matter of individual instruction: teachers, instructors, and professors are important because it is not always possible to learn the finer details of a subject from books. Besides, most people learn faster and develop a greater understanding of a particular subject through interactive communication.

The *Portable Companion* works hard to be the next best thing to face-to-face personal instruction. We listen to your needs and desires, your frustrations and problems.

When seemingly impenetrable barricades block your path, let your friendly *Portable Companion* know. Together, we'll have you back in the game leaping over tall buildings with a single dBASE command and programming faster than a speeding bullet.

Q: I need help with the "Using XDIR to Create a Disk Directory" article on page 67 of the Dec/Jan issue of

T-PILOT

KCC's implementation of the popular instructional language PILOT provides the CP/M system programmer with an extremely versatile means of creating computer aided instructional programs. The simple syntax of T-PILOT provides an excellent introduction to elementary programming techniques to the novice as well as providing the experienced programmer with an easy means to construct interactive programs. T-PILOT's powerful string-matching feature allows for convenient programming of the "Question/Answer" type of instructional program. Also included are sample programs and a comprehensive documentation package.

KCC T-PILOT \$39.95

LUCIDATA PASCAL

POLYBYTES' versatile implementation of Lucidata's field-proven Pascal system provides the CP/M programmer with a powerful language system which is fully compatible with his/her current operating system. Pascal's data structures and programming constructs combined with Lucidata's 9-digit REALs, and extensions such as program chaining and random disk file access, give this system the sophistication to handle the most complex programming tasks.

LUCIDATA PASCAL VERSION 3.8, Reduced \$49.95

TOOLKIT #1

KCC's first in a series of CP/M utility program disks. Programs included are: BINHEX - a program that converts a binary file to its hex equivalent and outputs it to either a disk file or an output device. HEXBIN performs the reverse of BINHEX. Together they provide an excellent means to transfer binary files between computer systems. MAKEHEX, converts a binary file to a standard INTEL format hex file and outputs it to either a disk or output device. TRAN1 is an ASCII transfer utility and directs its output to a specified disk file. Finally, DUMTERM1 turns your CP/M system into a dumb terminal for use with a modem or other computer system.

KCC TOOLKIT #1 \$29.95

KCC's products are available for CP/M version 2.0 and higher, and can be shipped on Osborne's single-sided, single-density format. (CP/M is a registered trademark of Digital Research Corporation.)

DEALER INQUIRIES INVITED!

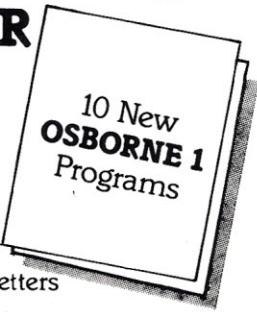

FREE CATALOG OF NEW SOFTWARE FOR OSBORNE 1

Describes easy-to-use software for business applications: like our low-cost SPELL program that instantly converts your word processor into a spelling error locator. (No more embarrassing mistakes in letters and reports!)

Lists software designed for pure fun: like ELIZA—a robot "psychiatrist" that dispenses hilarious pseudo therapy. Great for parties.

Presents languages for advanced programmers: like C compiler, LISP, RATFOR, 8080 and Z80 macro assemblers.

Heath/Zenith and 8" CP/M* owners: catalog also lists 21 programs for your system.

Call or write for your free Software Toolworks catalog.

the *Companion*. Everything works except use of the command:

XDIR B:.* A:-001A

This command does not produce a file "-001A" containing the listing of the files on the diskette in drive B. I have tried other arrangements of the command with no luck. And, of course, XDIR is not detailed in the *Osborne User's Reference Guide*.

Please advise what changes are required in order for me to make a disk directory with my Osborne 1 (double density).

A: None—it should work as specified with either single or double density computers. There could be an error in your XDIR program; we have not received any other complaints with that article or XDIR in general.

Make sure a space exists between the * and the A:. The command does not work without it.

XDIR.COM, incidentally, is a public domain program placed on Osborne software as an added convenience *without* charge to the user. Mention of XDIR is excluded from the manual because of certain gray areas of public domain copyright laws and ownership.

Q: I created a small random access file and a program (MBASIC) to select records from it based on any combination of data in the various fields. When searching on the basis of data in two of the three searchable fields, I got repeated BDOS ERR ON B: BAD SECTOR for a particular combination within those two fields; the error was always at the same place. Searching on the basis of the same two fields, but for different entries, didn't produce the error. When the trace facility (TRON) was on, the error didn't occur. I'm using double density.

I ran my program on another double density Osborne 1 and it worked fine. What's going on?

A: We can intuitively figure out that TRON slows down the program allowing it to complete execution. We can also conjecture that the entries causing the problem are probably "worst case" time guzzlers. (It would be helpful for us to have your program and data base listings.)

Try running System Checker, an Osborne diagnostic software package, on your computer to analyze memory and drive functioning. It sounds like a hardware timing problem—probably a bad disk drive or disk controller. Let us know where we can send the get well card.

Q: I recently upgraded my computer from single density to double density; my computer now uses 1.4 BIOS instead of 1.3 BIOS. Addresses for BDOS, formerly at E5xx, are now at E1xx causing problems in software I have downloaded from bulletin boards. Could you clarify these BIOS changes in your magazine?

A: Double density is a different product with expected changes to both hardware and software. The 1.4 BIOS upgrade added a printer initialization string, IEEE device addressing, IX/IY register preservation, and variable disk format recognition. At the same time, ROM was upgraded to 1.4. It added multi-density formatting, moved I/O functions from BIOS to ROM, increased the size of BMRAM, and provided a graphics offset.

Assembly language programmers can determine the address of BDOS and CCP for versions A through 1.4x with the chart below.

Version #	Start of BIOS address
Rev A	EA00
Rev 1.2	E600
Rev 1.3	E500
Rev 1.4x	E100

DISCLAIMER! OCC does not guarantee that the direct call address is consistent—addresses in the jump table are dependent on the current size of CP/M. OCC might change it, a user might change it (MOVCPM), or the software vendor could change it.

The practice of making absolute location calls for the jump table is strongly discouraged.

Why? It is poor programming technique to make calls to a memory location that may move, and in the case of the Osborne 1, has moved. Such programs are no longer transportable, as you saw happen with the bulletin board programs. The programmer should always use BDOS functions to keep the program compatible with other CP/M machines and other Osborne ver-

sions. Retrieve the address for the warm boot from location 1 and 2; LHLD 1 is an assembly instruction that can retrieve that address. The offset for any other jump in the jump table has *always* been consistent in relation to the warm boot.

Programs published in this magazine before the release of double density didn't always follow "transportable" programming procedures. For example, in the Dec/Jan 1982 issue of the *Companion* we ran an assembly program titled "Disk Snooping" that will not run on double density computers due to the absolute location calls. The addresses could be changed to reflect the current 1.4x status and thereby run the risk of repeating the same error, or the appropriate call to the warm boot address could be inserted.

The chart below gives an idea of the 400 hex offset that now occurs between 1.3 and 1.4 machines. (The addresses are examples from "Disk Snooping".)

Rev 1.3	Rev 1.4	
E527	E127	Read from disk
E52A	E12A	Write to disk
E51B	E11B	Select disk drive
E524	E124	Set disk memory address
E51E	E11E	Set track to read/write
E521	E121	Set sector to read/write

Q: I own a Brother HR-1 printer that I use with my Osborne. Recently, I discovered eight special characters on the daisy wheel that I am unable to print. These are:

\pm^2 $\frac{1}{4}$ $\frac{1}{2}$ $\frac{1}{3}$ $\frac{1}{4}$ $\frac{1}{5}$ $\frac{1}{6}$ $\frac{1}{7}$.

The store where I purchased my system has been helpful with other matters, but printer questions seem to throw them for a loop.

I could call Brother Industries in Nagoya, Japan, but I made the mistake of taking French in high school instead of Japanese and Printerese. Can you help me?

A: Oui, mais bien sûr! How can "le Quiz" résister à une "cha lâge"?

Inspector Clouseau used the following resources to solve this

"Case of the Missing Characters":

- 1) the Brother HR-1 printer manual's ASCII control code chart (page 27, serial model; page 23 parallel model);
- 2) Osborne 1's ASCII control code charts (last pages of spiral bound manual, pages 84-85 in the Aug/Sep '82 *Companion*);
- 3) WordStar 2.26; and
- 4) a daisy wheel printer (non-Brother) for control purposes.

The HR-1 manual lists in their ASCII code chart hex codes for all the characters on the daisy wheel font. They were matched to the appropriate hex code for the Osborne, which is a standard character set. Two of the characters (\pm^2) could have been found by typing all of the keyboard characters. That's not the case with the \circ , $\frac{1}{4}$, $\frac{1}{2}$ and $\frac{1}{3}$ symbols. They are accessed by pressing Control (CTRL) and the symbol indicated—a process that is not as obvious, but was reported in a previous *Companion*. Of course, what you see on the screen will be different from what the HR-1 prints. It doesn't matter, as long as the hex codes are the same.

Keystroke	HR-1	Osborne 1	Hex
\backslash	\pm	\backslash	5C
\wedge	2	\wedge	5E
CTRL =	\circ	\circ	60
CTRL ,	$\frac{1}{4}$	{	7B
CTRL .	$\frac{1}{2}$	}	7D
CTRL /	$\frac{1}{3}$	\sim	7E
	??	??	??
	c	??	??
	??	??	??

Figure 1

I did not find any mention of the \circ and $\frac{1}{3}$ symbols in the HR-1 manual. Make sure those characters actually exist by directly examining the petals of the daisy wheel font.

Q: How can I use a phone with the COMM-PAC modem? I realize that AMCALL performs automatic dialing, but sometimes I'd rather use MODEM7 (with dialing features enabled) than AMCALL.

A: From a electronics store, purchase a dual modular phone connector and second phone cord with modular connectors on each end. See page 68 in your COMM-PAC manual for instructions and illustrations.

Can you tell the IBM® from the Transtar 130?

A

Letter quality
standard of
the industry

5x magnification

One of these two print samples was generated by an **IBM Selectric II**: the letter quality standard of the industry. The other was generated by the new **Transtar 130** letter-quality printer.

B

Letter quality
standard of
the industry

5x magnification

And print quality is just the beginning! The new Transtar 130 daisy wheel printer is also plug-and-go compatible with the best-selling word processing packages! It features bidirectional printing, superscript, subscript, underlining and a true boldface. Retail price? Only \$895.

Quietly producing copy at 18 cps Shannon text speed, the Transtar 130 also features a unique autoload button to make printing on letterheads a breeze! Three new daisy wheels have just been made available for the 130 from your dealer: letter gothic (shown), script, and a 15-pitch "gothic mini"—perfect for printing spreadsheets to fit on one page!

Offering an end-user warranty period of a full six months, the Transtar 130 is an extraordinarily reliable machine. Its minimal failure rate runs less than 1%, but if your 130 should ever need repair, a nationwide network of authorized Transtar service centers stands ready.

Have you decided yet whose type is whose? If you picked A... You picked Transtar. The new standard for letter quality printing.

Me and My Ramblin' Osborne

Traveling with your computer

David Kline

Traveling with your portable computer is a little like smuggling contraband across international boundaries. There's an air of mystery, a whiff of danger, a vision of private indulgence behind locked doors in your hotel room. Most people haven't the faintest idea what you're carrying in that funny looking case as you amble through the airport terminal towards the departure gate. A few people, however, smile knowingly—a wink here, a whispered remark there—as you breeze by.

Kline, flocked by a group of Afghan rebels (yes they're real folks) and his favorite traveling companion.

"Mommy, why's that man carrying a sewing machine?"

"That's no sewing machine, Suzy. That's his computer."

"Why's he carrying a computer?"

"So he can be smarter than other people wherever he goes, Suzy."

"If he's so smart, then why's he all sweaty from dragging that heavy computer with him?"

Traveling with a portable computer brings to mind bygone days when Volkswagen owners used to honk as they drove past each other. Indeed, it wasn't that long ago when a small car lacking tail fins was a real novelty, a genuine curiosity. I remember my mother wondering aloud, as I strained to peer over the dashboard of our '55 Ford, how anyone could possibly squeeze into a car that small. I wondered what those Volkswagen owners knew that the rest of us didn't.

Well, times have changed, but America's addiction to ever-new technologies hasn't. Today portable computers are a novelty. Tomorrow every Rotarian will have one. Today, they're good conversation openers at parties. Tomorrow, you'll be the same nerd around women (or men, as the case may be) you always were.

The point is this: these days, while portable computers are still

quite rare, few people have much experience in actually "porting" them around. Indeed, the care and feeding of your Osborne while it's on the road—the dos and don'ts of computing in the fast lane—is an unknown science even to most Osborne owners. So here are five simple rules for traveling with your Osborne:

1. Pack Wisely

If you're the type of person who drills holes in his toothbrush handle to cut down on travel weight, you may not want to be dragging a portable computer with you, whether it weighs 24 or only 15 pounds. I, on the other hand, am the sort of person who brings five ties because I can't decide which one to wear. But if you decide that you really do need portable computing power and that it's worth a little inconvenience, here's what you'll need to bring along just for travel within the United States:

- One plastic disk-travel box containing two of each application program diskette you'll be using (always have backups), and twice as many blank formatted disks as you think you'll actually need. If you plan to travel to a dusty or dirty environment—say you're going camping for a month

in Death Valley—then you should also bring one head-cleaner disk.

- An old style three-to-two-prong adaptor plug (with each prong the same width) because wall sockets in many older hotels and offices won't accept the new-fangled "polarized" plugs.
- Documentation for any application program you don't already know by heart.
- A list of Osborne representatives, if any exist, in the cities you're visiting.
- Unless you're certain that you'll be able to use a modular-plug direct-connect modem where you're going, bring a lightweight acoustic modem, such as the U.S. Robotics Phone-Link which, with its power supply, weighs only 20 ounces. An acoustic modem, however, will probably restrict you to 300 baud transmission.
- A few extra fuses for your 120V AC current card in the blue-case Osbornes.

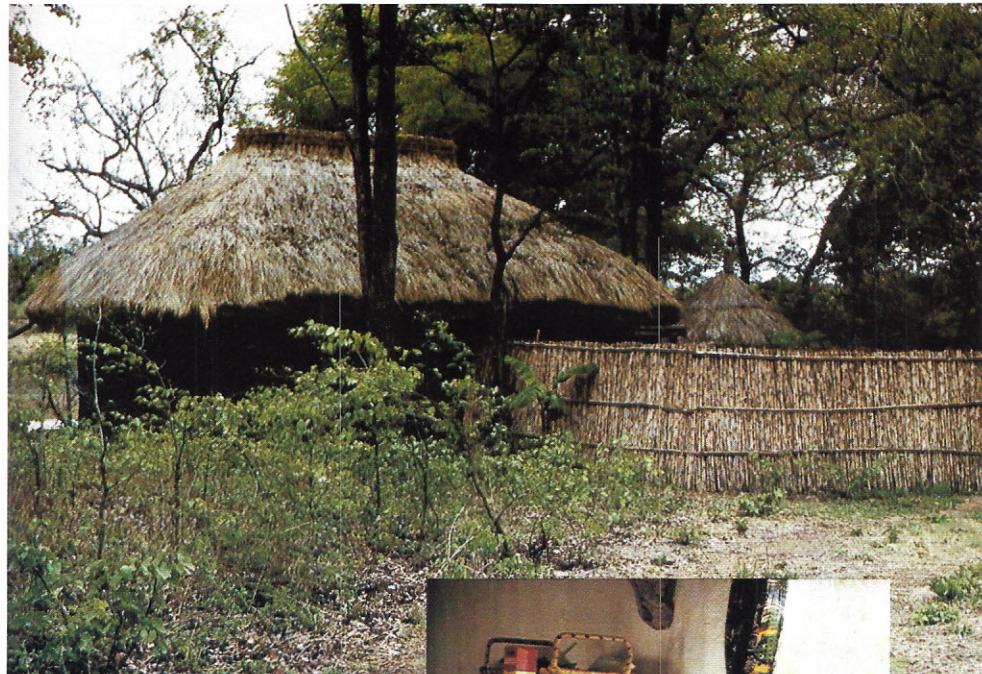

If you're traveling to another country, however, you'll need to bring the following additional items:

- Adaptor plugs designed to fit the electric wall outlets of the countries you're traveling to (available from any electronics supply store or Radio Shack). There are about five different styles in use in the world today.
- A few extra fuses for any foreign 220V AC current environment—if you've got the blue-case Osborne with current-

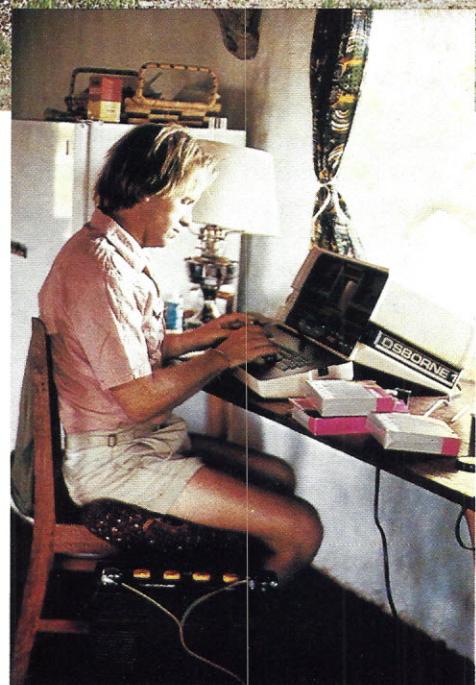

"...the care and feeding of your Osborne while it's on the road—the dos and don'ts of computing in the fast lane—is an unknown science to most Osborne owners."

change ability, that is. If you have the older tan-case machine, you'll need a small Phillips screwdriver and a tiny Allen-wrench (to remove the screen brightness knobs) in order to get inside the machine and alter the power supply. This, by the way, is not at all a difficult job. Any Osborne dealer can probably show you how to change the current from 120V to 220V or back in ten minutes.

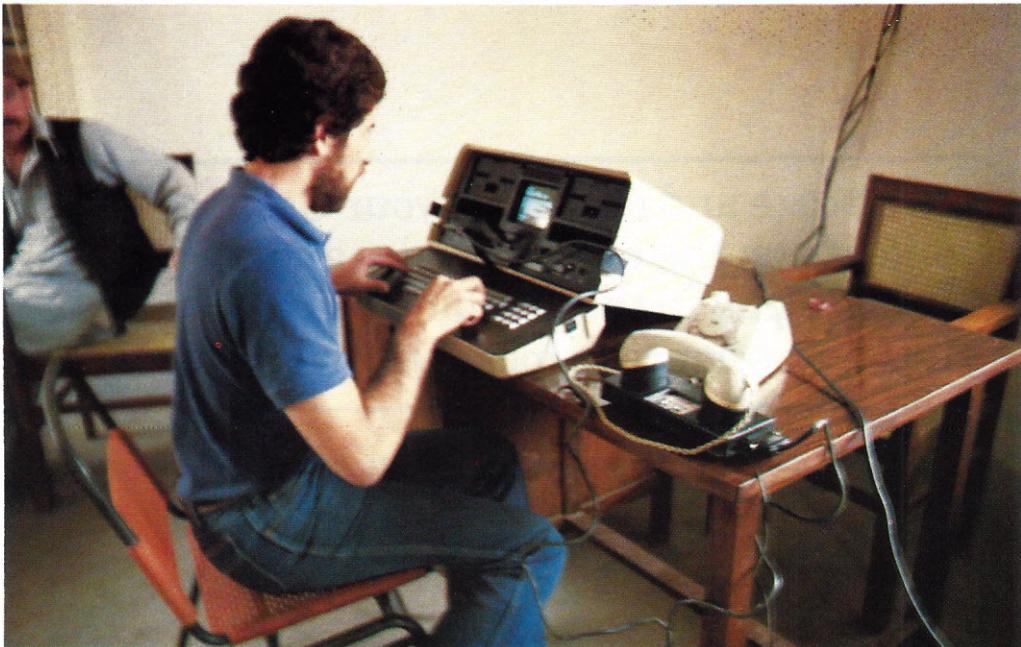

- A current converter, available at electronic stores for less than \$10, to power your modem or other 120V peripherals in a 220V environment. It is not recommended that you use such an outboard converter to power the Osborne itself, however, since this device does not alter the cycling of the current from its normal 60 hz to 50 hz.
- Though probably not essential, a voltage spike suppressor is also not a bad idea to bring along when visiting some underdeveloped countries with irregular and erratic electrical systems. If you'll be computing in a 220V environment, the suppressor will, of course, need to be modified. Electronic Specialists in Massachusetts makes a good unit, and they'll modify it to 220V for you if you ask them.
- A few retail brochures and magazine advertisements on the Osborne. I've found this very useful with customs and security forces in countries

Lewis' residence located on the banks of the Luangwa River in Zambia.

Dale Lewis inside his African bush home with the Osborne.

Filing a story via an acoustic coupler modem.

not familiar with the concept of a "personal" computer. More on this later.

- One tube of Super-Glue (those plastic case locks that hold the keyboard folded in place make me nervous).

In addition to the items recommended above, another travel tip comes from David Gray, a Florida-based missionary who flies his Osborne down to the Haitian jungles with him on medical mercy trips to aid the locals.

"I'd recommend attaching a good piece of styrofoam on the bottom of the machine so you don't scratch the case when you set it down," says Gray. "Also, I'm looking for a webbed shoulder-bag to carry the computer in...something to allow me to strap it over my shoulder and yet evenly distribute the weight."

If these sound like good ideas to you, go right ahead. But I figure the plastic case is made to be scratched, and the suitcase-style carrying handle is good enough for me.

2. Don't Feed the Gorillas

There really are gorillas at the other end of those luggage conveyor belts, so never—repeat, NEVER—check your computer as luggage. Portable computers will truly be of briefcase size and weight long

before they're engineered to withstand baggage handlers, so just strike the idea of checking it right from your mind now and forever.

This means, of course, that you've got to carry it with you through the airport and on the plane. This is where most people begin to question whether they really need to bring the Osborne with them after all. In Chicago's airport, for instance, where the walk from ticket counter to departure gate may be longer than a mile, even a football player can get tired carrying his Osborne (or at least end up with one arm longer than the other). So one of those fold-up luggage carts might be useful for the less-muscled among us. Also, be aware that the computer may not always fit under an airline seat (despite propaganda from certain quarters to the contrary). You can usually get a flight attendant to place it in one of the coat closets or overhead racks.

3. Be Nice to Airport Security

They have guns and you don't—never forget this elementary truth. Nonetheless, while maintaining a pleasant attitude with airport security personnel, I do not allow my floppy disks to go through x-ray or other scanning machines. Instead, I insist on a hand-check. Airport officials, of course, claim

their machines won't harm film or magnetic tape, but I don't believe them. At the very least, I can't see how those machines could possibly be beneficial to either film or floppies. So my advice is, stick with hand-checks of your floppies. In that regard, only the Paris and Geneva airports refuse to allow hand-checks of carry-on luggage under any circumstances, so if you pass through these cities, you'll probably want to put the disks in with checked luggage.

As for the computer itself, it's fine to pass it through the scanners. As far as I know, this doesn't hurt the Osborne's innards, and running the computer through the scanner without opening it has the added advantage of not arousing the curiosity of the security police, most of whom (if you're overseas) have never seen nor even heard of a "personal" computer.

I recall once going through Karachi customs, however, when a soldier demanded I open the Osborne up. I flipped down the keyboard, and he poked at it with the barrel of his German-made G-3 assault rifle.

"Mistuh, wat es thees?" he asked gruffly.

"Uh, yeah, man...it's a Hollywood typewriter, okay?" A helpful smile was imprinted upon my face. After some head scratching, the soldier seemed satisfied, and he reluctantly allowed me to continue my journey.

On another occasion, going through customs in Bogota, I was approached by an official of the DAS, which is Colombia's local equivalent (sans black loafers) of

"If you're the type of person who drills holes in his toothbrush handle to cut down on travel weight, you may not want to be dragging a portable computer with you..."

the CIA and FBI rolled up into one. He wasn't impressed with my "Hollywood typewriter" story, so I had to bring out the magazine advertisements showing what a personal computer was. In the end, he stamped my passport with the Osborne's serial number and the notation that I had to have the unit with me when I left the country. He wanted to make sure I didn't sell it on the black market and cheat the government out of its import tax.

On this score, please be advised that in some countries possession of an Osborne computer may be taken as *prima facie* evidence of employment for the CIA. Since you don't want to spend a few weeks learning the fundamentals of electrical current theory at the hot end of a police electrode, it's really best to carry some evidence of the machine's innocent albeit complicated nature with you. Thus when I'm a stranger in a strange land, I always carry that small packet of retail brochures and magazine advertisements—some visual proof that the computer is, in fact, a consumer item where you come from. If you travel in the Islamic world, however, just be sure the ads don't come from Playboy.

4. Keep Your Computer Cool and Dry

"I never remember to bring enough of that silica gel moisture absorber," says zoologist Dale Lewis, whose New York Zoological Society-sponsored African elephant research project makes use of an Osborne for radio tracking of ele-

phants, for report writing, and for variable habitat resource-use simulations.

"It gets over 115 degrees in the Luangwa Valley in Zambia," Lewis notes, "and in the rainy season it's like being underwater. When I'm not using it, I keep the Osborne in a large vinyl, all-weather bag with lots of absorbent silica gel. The bag also helps keep creepy crawlies out of the disk drives."

You may not have to worry about African creepy-crawlies when you bring your computer on your next Caribbean cruise, but trying to minimize environmental stresses on your computer is always a good idea. Factory specifications warn that the machine should not be operated at temperatures above 85 degrees Fahrenheit, but I've used it in the Amazon jungle in a humid low-90s environment and in Pakistan at temps over 105 degrees. I don't recommend doing this for more than an hour or so at a stretch, however, and it's probably wise to save your work every five or ten minutes just in case the computer kicks out temporarily from heat stroke. Anyway, the best way to avoid the whole problem is to stay at an air-conditioned hotel. Another method to control heat is to install a small fan in your Osborne.

5. Phone Home

From probably anywhere on this planet you have the ability to communicate articles, notes,

business plans, expense reports or whatever you want from your portable Osborne to any computer back home, using an acoustic modem and a telephone. Assuming for a moment that you are outside the United States, communicating by modem has several advantages over sending the same information by telex.

- Unless you or your company have a telex of your own in a private overseas office, it's usually cheaper to make a long distance telephone call (or even better, have your U.S. station call you) and transmit at 300 baud, than it is to send a telex from a public telex office.
- It is definitely quicker and less hassle to use a modem, since you don't have to first type or print out your message and then give it to a telex operator for rekey-boarding into his system prior to transmission. As yet, there is no easy way to download your message from the computer directly into a telex machine.

In this regard, anyone who comes up with a "black-box" device to hardwire-interface a computer with a telex (most lack RS232 ports) and at the same time to convert your computer's 8-level ASCII code to 5-level baudot (not to mention slowing it down to 50 or 110 baud) will make a bundle of bucks. The worldwide telex network is securely in place even in the most remote re-

"Though probably not essential, a voltage spike suppressor is also not a bad idea to bring along when visiting some underdeveloped countries with irregular and erratic electrical systems."

gions and it is not about to be replaced any time soon. The task, therefore, is to come up with a means of piggy-backing the up-and-coming personal computer network onto that telex network.

- Since English is probably not the telex operator's first language, your article or message is less prone to error or misspelling if you transmit it yourself from computer to computer.
- Transmitting by telex almost certainly allows the government of the country you are sending from to read your message, since communications systems are usually government-owned and operated overseas. Modem transmission is thus more secure. Another advantage of having your U.S. station call you rather than the other way around is that there is less chance of operator interference.

With all these advantages, why would anyone ever want to use telex? Sometimes you simply won't be able to get a phone call through to the States, especially from some Third World countries where phone systems can be primitive. Or, even if you can make the call, it might be so full of static and distortion that even with error-checking communications software like Modem 7 or AMCALL—and even with relatively-slow 300 baud transmission—your message will simply be too garbled. That's when you'll have to make use of telex (and that's why it would be so useful to have a

computer-telex interface). If you're communicating from within the U.S. or North America, though, a computer-to-telex interface is already possible via telephone dial-up patch systems such as those offered by Graphnet (\$5 monthly subscription fee) or Western Union (\$35 monthly fee).

What modem should you use? I recommend an acoustic model unless you are absolutely positive that the phone system in your location is connected by modular jack. Unless you can find a modem with adjustable acoustic cuffs, you'll also have to make sure to stay in a hotel or residence with a handset that is the standard seven-and-three-quarters inches in length. These can vary, and there's nothing more frustrating (I'm speaking from experience now) than finally getting your U.S. call through, priming the computer on the other end, and then discovering that the hotel phone won't fit in your modem's handset cuffs.

One final note: contrary to the occasional rumor floating out of Osborne's Marketing Department, you do not need an export license to bring a computer overseas, as long as the equipment you're bringing is for personal use and is what's known as the "tools of your trade." There may, however, be some restrictions even on the personal use of a computer if you're going to a Communist country, so if that's your destination you might want to contact either the trade consultant in your local U.S. Department of Commerce office, or Mr. Archie Andrews of the Commerce

Department in Washington itself.

If there are other tips for traveling with your Osborne that I've neglected to mention, or if you have any special questions about bringing the computer with you on your next trip, drop me a line here at the *Portable Companion*.

But this is probably enough to get you started on the road. Whether or not you'll actually need the Osborne in portable mode is something you'll have to decide for yourself. It works just fine sitting on top of a desk. But there's no denying that today the few portable computerists confront a rare window of opportunity for getting ahead in life, if they are aggressive enough, lean enough, *hungry* enough to charge ahead through it. Even while winging your way to a management seminar in St. Thomas at 37,000 feet, you can be getting the jump on the competition. While he's stiffed out in his seat over a double-scotch, a copy of some inane magazine draped over his face, you can be Super-Calcing a plan to take his accounts away from him. ("What if...What if I poisoned the sonuvabitch's coffee?")

For the rest of us, who don't necessarily live for the moment when we can sink our teeth into someone else's jugular, who knows? I suppose it's still better than being left behind by evolution, scorned as a Neanderthal in a world of coneheads.

David Kline last wrote for us in the April/May issue on "Syndicating With Your Osborne."

The Next Step Forward

You have the finest portable computer on the market. And with it you are growing in knowledge and experience. And you are ready to move on. Now OSMOSIS gives you the growth path.

A path that leads you forward as your requirements become more sophisticated. Expanding the potential of your investment.

We have turned your Osborne® into a completely professional business computer with total portability — at an unbeatable price.

OSMOS 1

Double Density. 184k per drive using existing drives. Fully compatible with all Osborne software. \$195 Install it yourself and save \$165 on Osborne's charge.

OSMOS 4

Disk Formatting & Conversion: Allowing your Osborne to read, write and format over 20 other manufacturers CP/M formats! \$225

OSMOS 8

Use your Osborne to monitor and control instrumentation. Analog/Digital, Digital/Analog, and Digital/Digital cards.

OSMOS 1.5

Get Single-sided Double Density now on existing drives and upgrade to 370k per drive later with the addition of new drives. \$335

OSMOS 2

Double Sided Double Density. 370k per drive. Fully compatible with all Osborne software. \$895

OSMOS 3

Double Sided Double Density Double Tracking. 750k per drive. An incredible 1.5MB. of portability! \$1050

UNIQUE PACKAGE DEAL OSMOS 1, 4 AND 5

ALL FOR \$385

Single Sided Double Density \$195
Internal 80 column board \$250
Disk formatting and conversion software . \$225

YOU SAVE \$285

(Offer valid until September 15, 1983)

OSMOS 5

An INTERNAL 80 column board with lots of additional features and NO alteration required to existing software:

Full width screen • 80 columns on internal and external video
Normal/Inverted video • Underline • ¼ and ½ intensity
Optional additional character sets e.g. Greek, mathematical

Additional graphics characters for screen form design
Includes a Hard Disk interface for future plug-in expansion
At a very low price of only \$250

OSMOS 7

Winchester disks. Expand your capacity to unprecedented levels! Available in 5½, 10½, 15½ & 21 MByte units — a 42 Megabyte max. capacity! \$2475 to \$3650

All OSMOSIS upgrades are plug-in. There is no soldering or cutting. Our products are supplied as kits for existing units and require no modifications to the Osborne computer. No specialized knowledge is required. Step by step installation manuals are included.

OSMOS 10

Olivetti ET121 to Osborne plug-in RS232 KSR interface. Fully compatible with Wordstar, printing up to 45 cps with a 2k print buffer. A highly sophisticated interface. \$500

We've just turned your Osborne into a new computer.

Part II: Interfacing External Devices

A joystick spacewar game

Kelly Smith

Editor's note—In this second of two parts, Kelly Smith of Wizard of OsZ provides a SPACEWAR game using an Atari joystick interfaced through the 6821 PIA/parallel port. Kelly also includes a "blow-by-blow" description of his program.

In Part One of last month's "Interfacing External Devices" Kelly showed how to:

1. Connect and wire an Atari joystick;
2. Create an "Etch-a-Sketch" assembly program that tests the joystick;
3. Write a program that can be used within any MBASIC application requiring a joystick interface.

The blow-by-blow

Lines 50 to 150

SPACEWAR utilizes almost all of the Osborne 1 cursor and graphic control features.

Line 220

Block-moves (GOSUB 8000) the machine code required for low level interfacing to the 6821 PIA/Parallel Port and joystick, as well as execution of the initialization portion (the CALL ISTK) of that same code.

Lines 230 to 570

Performs a "flashy" display of the instructions, directing the player's attention to the key control functions.

Lines 580 to 680

Sets up player's skill level and displays "Good Luck" message.

Lines 690 to 760

Displays pilot rating level, target cross-hairs, random target position coordinates and alien craft.

Lines 770 to 980

Program loop to position the alien craft, examine the player's joystick input and respond to that input. Lines 800 to 820 are "frills" to make the screen busy, with target position and run time information used as a measure of skill (i.e., "zapped all of 'em in 243 units of time!"). Line 840 reads the joystick (the "CALL RSTK"), which "drops-off" its value at memory location DSTK—the value of STK is then the content of DSTK that is PEEKed. Lines 860 to 940 translate the value read from DSTK to generate the proper X and/or Y coordinate position, or fire on the alien craft. Lines 950 to 970 are alien craft screen position updating and positioning codes.

Lines 990 to 1120

Target cross-hairs. (Carefully count the number of space characters or the display will look VERY strange!)

Lines 1130 to 1150

Displays the alien craft target, with the only graphic character used in the entire program.

Lines 1160 to 1170

Positions cursor to the desired XY coordinate position.

Lines 1180 to 1190

Checks for a possible "hit" on the cross-hair center position.

Lines 1220 to 1380

A (rather crude) explosion when player shoots the alien craft, as well as a (corny) salutation in lines 1390 to

1430. In anyone has a better way of doing an explosion in MBASIC, I would sure like to know about it...gads, this took alot of code.

Lines 1440 to 1480

Adds ten points to the score and informs the player how many alien craft were destroyed and those that were just missed.

Lines 1540 to 1600

Displays your "mission record" after having successfully clobbered all five of the little suckers...appends a possible upgrade to your skill level (yes, you can be promoted), then waits to see if you want to play again.

Lines 1690 to 1710

Target position and screen update.

Lines 1720 to 1740

Determines overall skill level/rate of play. The value assigned to "T" at line 1720 can be adjusted for harder skill rate than program allows.

Lines 1750 to 1820

Checks to see that player has not flown out of target firing range, which counts as a hit from the alien craft (one hit and it's ALL OVER!).

Lines 1830 to 1880

Calculates and displays the current pilot rating, depending on current skill level of the player.

Lines 1900 to 1910

Reinstates the target cross-hair "+" sign center when overwritten by alien craft.

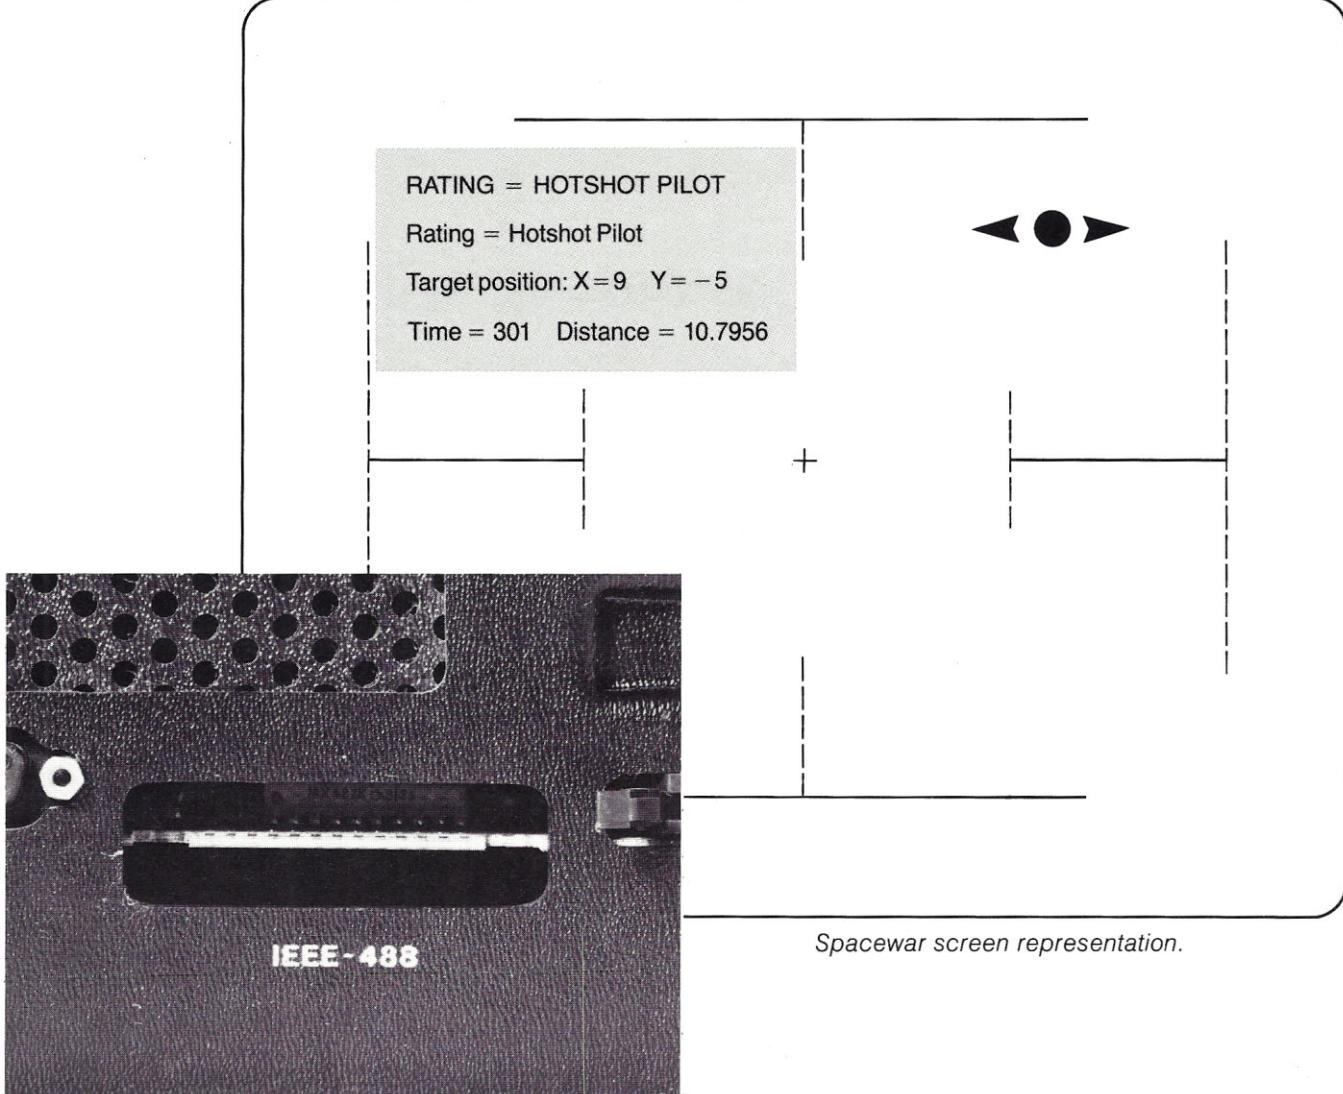

Lines 1920 to 1940

Prints a total score whenever there is a shot at the alien craft (either on a hit or a miss).

Lines 8000 to 8090

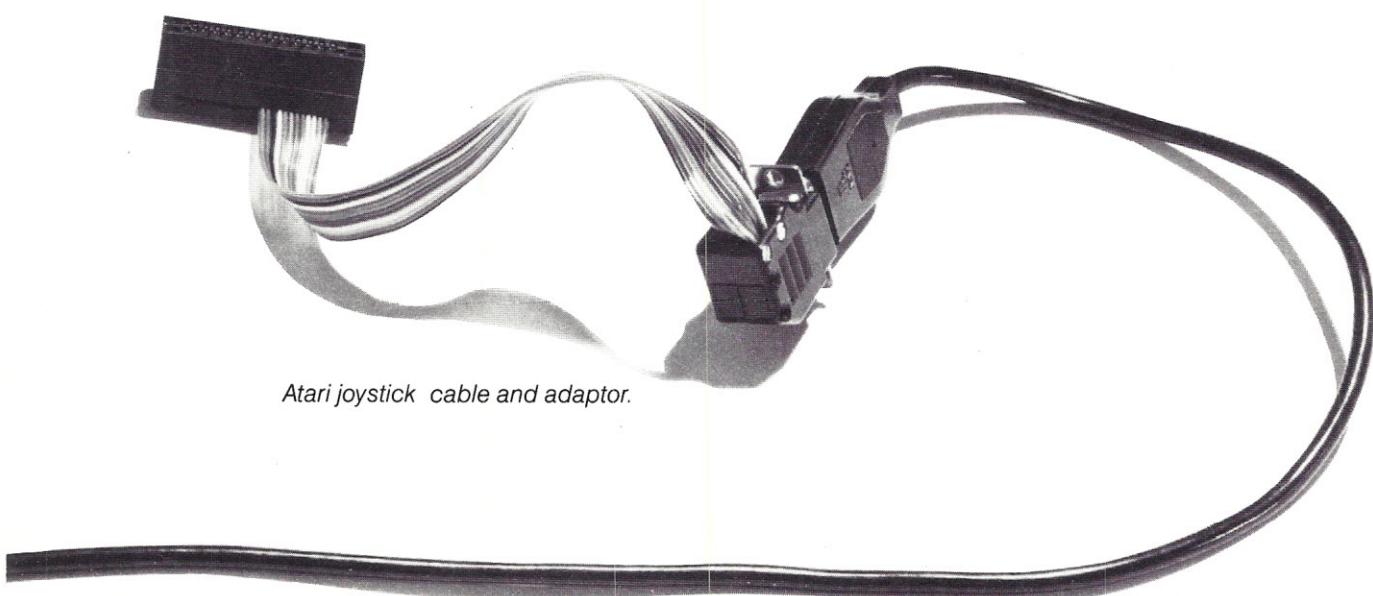

Routines required to read the joystick. In part one, I explained how to create this information from an assembly language program. For your monitor ROM version, press the reset button and view the Osborne sign-on message. For this particular program, the 1.2 monitor ROM addresses shown in the footnote will handle either 1.3 or 1.4 computers. (If you have a ROM version other than the three shown, use 1.2 values.)

SPACEWAR.BAS.

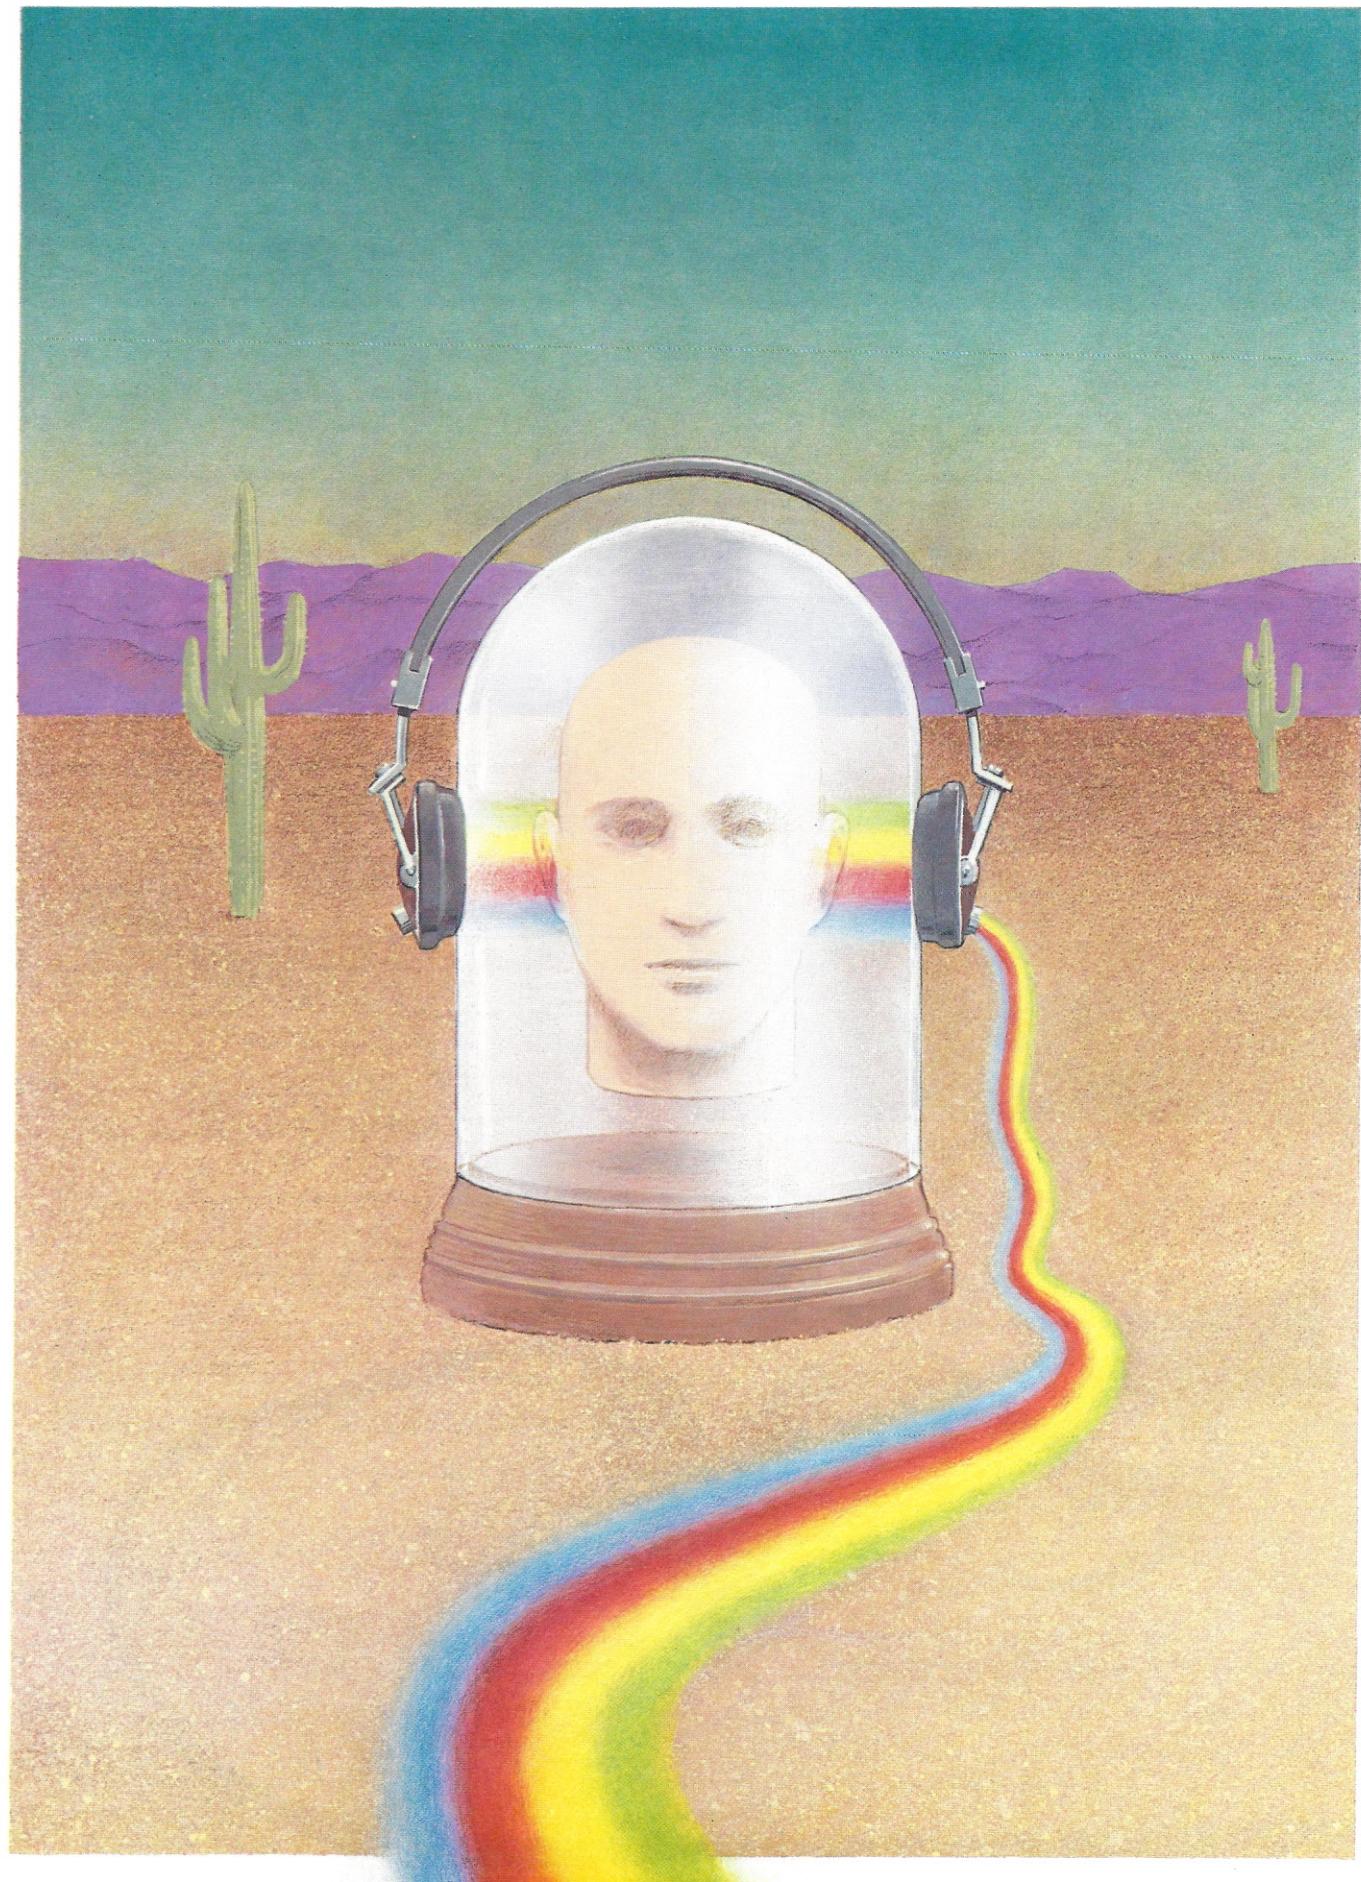

Osborne's IEEE port.

Spacewar screen representation.

Atari joystick cable and adaptor.

An Instrument of Liberation

A modem was Henry Kisor's liberator from a lifetime of lip-reading, relayed communications and unavoidable feelings of helplessness.

Henry Kisor

"HELLO, HENRY," said the green screen. "THIS IS BURKE CAMPBELL IN TORONTO."

Simple and everyday as they may seem to you, those words, appearing last November on my Osborne via the Chat function of The Source, are a landmark in my life. They meant that I could reach out and touch people in a way I had never anticipated since becoming totally deaf 39 years ago at the age of three. I am a newspaperman, and for the first time ever I was using the telephone to work at my profession, in this case interviewing the author of a book.

Let me backtrack a bit. Before the microcomputer revolution came along, one of deafness's worst aggravations was, for me, the inability to use the telephone to talk with *hearing* people. (The deaf can use teletype-writer-like "terminals" to talk with each other on the phone, but that is another technology and another story.) Thus in my job as book editor of the *Chicago Sun-Times*, I have had to ask hearing colleagues to make phone calls for me. That has worked well enough, but at a price: dependence on others and an accompanying fear of appearing helpless. When you're conscious of that, you're often reluctant to bother a busy co-worker with a request to call so-and-so, even if the information you need is important.

Also, I have had to conduct author interviews face to

face. Lipreading is a vastly imperfect method of communication; frequently I have had difficulty understanding my subjects, and sometimes never knew what they had said until an editorial assistant transcribed the tape after the interview. If, as often happened, the author had made a provocative statement or hint, it would be too late to pursue the thread. Missed opportunities abounded.

All this began to change last fall when a press release from The Source arrived at my desk at the *Sun-Times*. A writer named Burke Campbell, it said, was going to knock out a full-length novel on an Apple III over a period of three days at a Canadian computer convention, and The Source would put the novel online to its 26,000 subscribers as soon as it was completed.

Having been an Osborne owner for only three months, I was just dimly aware of The Source and indeed of the videotex industry. But I had a brand-new Hayes Smartmodem and a couple of modem programs to go with it—thus had all the equipment necessary to access The Source. And the idea was intriguing. Could videotex provide a new way to publish books, therefore helping to save the ailing publishing industry? It was a question worth exploring.

A few days later, after making arrangements to sign on to The Source and "download" (transfer) the novel to

my Osborne, I rifled through the literature The Source had sent me, and happened upon a description of Chat. That is a feature by which two or more microcomputer users can "talk" with each other on their keyboards, using The Source as an electronic relay station. Lights flashed and bells rang. Why not interview Burke Campbell that way?

Later that month Campbell wrote *Blind Pharaoh* in 61½ hours at Toronto's ArtCulture Resource Centre, and within three hours The Source had plucked it from Campbell's Apple and put it online. The novel, a melodrama with science-fiction overtones, was rough-edged, as one would expect in a job of speedwriting. It was a stunt, of course, but one pulled off handsomely. As Samuel Johnson observed when he beheld a dancing dog, the wonder was not that it was done well but that it was done at all.

The next day Campbell and I had our chat. Keying in questions and answers on Chat was at this stage of the videotex art a slow and cumbersome process—two empty and wasted minutes sometimes passed before The Source's computers could process query and reply, and bad telephone connections further glitched up the conversation. Still, considering my previous choices, it was a liberation. I was no longer depending on hearing people to serve as my telephone voice and ears.

A couple of days later I also interviewed Mike Rawl, The Source's Public Relations chief, via Electronic Mail (slower but less frustrating than Chat, and I could follow up promising leads just as easily), and the result of the two talks was a long column for the *Sun-Times* on videotex and the possibilities of electronic publishing of books. (The novel, I wrote, proved that "videotex is a going concern as an alternative to the printed book. The technology is here already; all that is needed to make it marketable is a larger audience. And that will come; the only question is when.")

And now I am itching to interview more authors with my Osborne. As word processing microcomputers supplant typewriters, opportunities should increase exponentially. Right now most authors who write on computers tend to be commercial or genre authors, those who must produce a great deal of written work speedily and efficiently.

(Writers) will also be using modems for research as well as information storage and retrieval, and it is these authors I will be hooking up with before long.

My specialty as an interviewer, however, is the "serious" novelist or biographer, and they have been slow to follow the revolution. To oversimplify things, traditionally they have been more interested in arrangements of words rather than the processes by which words are arranged. They write more slowly and painstakingly than most, and they are so used to a turtle's pace they still can argue the relative merits of a manual Smith-Corona and a Venus Velvet No. 2 with the eraser on one end.

But things are changing as they discover, as have most of us who write on computers already, that a computer is a godsend for rewriting and revision. They also will be using modems for research as well as information storage and retrieval, and it is these authors I will be hooking up with before long.

I've had a number of chats on The Source with computer owners in San Diego and St. Thomas, and I've also discovered the serendipity

of local bulletin board systems and remote CP/M operations. Videotex, I've discovered, isn't necessary for local calls or even short long-distance work. The Smartmodem has enabled me to talk on the Osborne directly with Apples and TRS-80s and IBM PCs. All that either end needs, apparently, is a modem program capable of switching to half duplex and preferably of issuing an automatic line feed (so that the cursor can begin a new line instead of hanging up on the last). I use both The Micro Link and OTERM, a public domain program by Michael M. Rubenstein and downloaded from the RCP/M operated by Chicago's First Osborne Group.

Truth to tell, I'd been a computer user since 1976, writing on an Atex mainframe word processing-typesetting terminal at the *Sun-Times* and before that the *Chicago Daily News*. Those six years have utterly spoiled me for typewriters, for reasons word-processor users all know. Early, on, I began going to the office on weekends so I could sneak in some freelance writing on the Atex.

Last spring, however, other freelancing colleagues started to clog up the Atex memory with unauthorized files, so the *Sun-Times'* front office discouraged all but legitimate work for the paper. And it occurred to me that a microcomputer at home would make it easier to work in the evenings or whenever the spirit moved.

That, in short, was what impelled me to purchase a microcomputer: the advantage of making an extra buck with less effort. It never occurred to me that the Osborne 1, intended to be used as a writer's workhorse, would also be a deaf person's instrument of liberation.

And that, in the long run, may be the greater benefit.

Henry Kisor is the book editor of the Chicago Sun-Times and a frequent contributor to the newsletter (PIP) of the Chicago Osborne User Group.

"I Love To Drive My 380Z"

.... And I can drive it at 32 CPS
with my personal computer."

DTC 380Z

- 48K buffer for high speed throughput
- Diablo 1640/1650/630 software compatible
- Serial and parallel interfaces
- Serial baud rates to 19.2K
- Built in diagnostics & demo program.
- Four CPU's, no cables, belts, wheels or pulleys

- Letter quality daisy wheel printer
- 16 print styles, 96 char. wheel, IBM type ribbon
- Automatic bi-directional printing
- Proven reliability 100,000 printer mechanisms produced

- Up to 32 CPS print speed in typical applications
- Interconnecting cables for all major micro-computers
- Automatic proportional spacing
- Parallel 6K bytes per sec. transfer rate
- Optional extras: forms tractor, cut sheet feeder.

THE PORTABLE Companion

The Inevitable Enhancement.

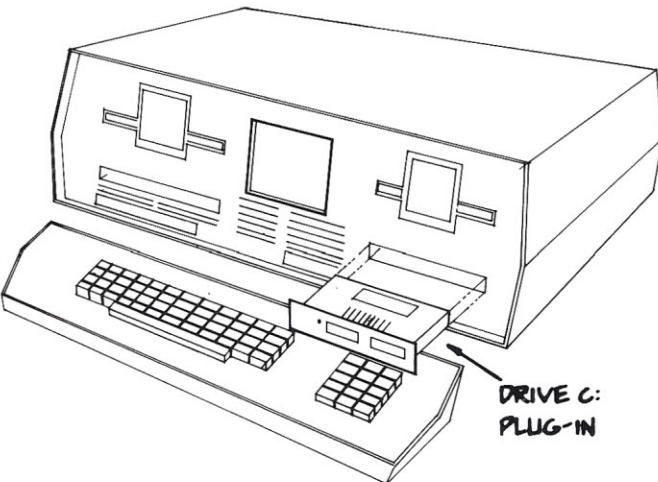

Here's what it does...

- adds up to 384K bytes of ultra-fast RAM to your Osborne 1.
- offers up to 20 times faster access to disk files using RAM-Disk emulation. The easily installed CP/M enhancement is supplied on diskette.
- slips into diskette pocket on old or new-style Osborne 1 cases, and plugs into IEEE-488 port.
- requires no hardware modifications of any kind for your computer.
- allows simultaneous use of Centronics-style printers also attached to the IEEE-488 parallel port.

We needed to increase the disk storage of our Osborne 1 computer beyond its standard 185K, so we asked our engineers to figure out a way to add two more double-density drives. As you can see the result wasn't quite what we really wanted. We insisted on something smaller, faster and less expensive, and sent the designers back to their drawing boards.

We're very proud of their second try. Now we have as much storage as four disk drives with amazingly fast access speed. We call it **Drive C:**

Drive C: has proved so useful to us that we figured it was inevitable word would get around and you would want it for your computer too. So if you want to double or quadruple your Osborne 1's storage and speed things up enormously as well, call us today and order your own **Drive C:**

192K 01 Drive C: (equivalent to one double-density drive) \$595

384K 01 Drive C: (equivalent to two drives) \$895

01 Drive C: Upgrade (converts 192K version to 384K) \$350

Prices subject to change without notice.

A Copyright Catechism

Programmers and end users alike are finding themselves overwhelmed by the morass of legalese surrounding the creation and use of software. Martha Gore imposes order upon chaos in this valuable article.

Martha R. Gore

Just a few days after Bob and Millie Smith brought home their new computer, they broke the law.

They didn't hold up a bank, or shoplift or steal money from their employers. What they did was make copies of programs that were part of the Osborne purchase package and give them to friends.

That was breaking the law? According to the copyright and patent laws of the United States, the Smiths had infringed on the rights of the writers and distributors of those programs. In all likelihood, they had signed an "end user" agreement which stated very simply

and firmly that the purchaser shall not copy, reproduce, remanufacture or duplicate all or any part of the product.

Possibly, the Smiths were not aware of their responsibilities as end users of computer programs. They most likely thought that words like copyright, patent, tradename and licensing agreement were simply legalese and had nothing to do with them.

In reality, this legal terminology is very important to anyone who ever thought about or copied, modified or developed a program for a computer. Each term refers

to a way that rights in a computer program can be protected.

This article gives the reader some insight into problems that can develop, but it is not a substitute for legal advice. That must come from a copyright or patent attorney who is familiar with the unique situation of his client.

The Stimulus of Profit

The laws which govern the protection of software were passed to encourage the production and dissemination of information to the public. The idea behind them is that if writers are promised a monetary

return for the time and effort they put into their work, it will encourage them to continue to bring their products into the marketplace. The laws provide an economic link between the technician (the creator

secret laws cover some of these.

But when a person, in the process of writing a new program, uses words or symbols which may have been applied earlier, is he creating an original work?

There are arguments on both sides of that question. Some lawyers believe that even if a lot of old material has been combined in a new way, it should be eligible for copyright. Others call this a derivative work (which the law defines as something based on pre-existing work), which cannot be used without permission of the author.

Another opinion is that the "idea-expression identity" exception in the copyright law would apply because if there are limited ways of expressing an idea, the words or symbols can be used without copyright infringement. This is a logical extension of the part of the law which states that ideas may not be copyrighted.

When using computer languages, there are a limited number of ways that specific instructions can be given to accomplish a task. In interpreting the law, the courts have decided that if certain program language is necessary to achieve a given result, and if there is no other way available at that time to achieve that result, programmers are free to read copyrighted programs and use those ideas when preparing a new work.

Of course, this would be almost impossible under trade secrecy where the text of a program is designed not to be revealed and also under patent law where the process itself is protected.

When a program is put into a permanent or stable copy which will allow it to be perceived, reproduced or otherwise communicated for more than a transitory duration, (i.e., on hard disk or paper) it is considered "fixed" and eligible for copyright protection. The moment it is put into its fixed form, by law, it is copyrighted. A wise author would put a copyright notice, ©, the date and his name on the work immediately, even if it is not com-

Why are the courts continually trying to settle arguments? Sometimes it's because program writers and users don't think... until they are in the middle of an after-the-fact controversy.

of a computer program) and the public. If it's that simple, why are the courts continually trying to settle arguments? Sometimes it's because program writers and users don't think about legal ramifications until they are in the middle of an after-the-fact controversy. Some problems could be avoided with a little knowledge and a lot of caution.

When the Congress of the United States passed the 1976 Copyright Law, it equated computer programs with literary work. In 1980 the law was amended to cover object codes and defined a computer program as a set of statements or instructions to be used directly or indirectly in a computer to bring about certain results.

Is It Eligible for Copyright?

To be eligible for copyright, a program must meet two criteria. As in the case of a literary work, it must be an "original" creation and must be "fixed" in a tangible medium of expression. That word "original" is easily the most difficult to interpret.

Simply put, if an author creates a work independently and does not copy it from another's work, it can be copyrighted. Some things which cannot be copyrighted are ideas, titles, names, procedures, processes, systems, methods of operation, concepts, principles and discoveries. Patent and trade

pletely finished. The copyright notice declares the author's exclusive right to the publication, production and sale of the rights to a computer program for the life of the writer and for 50 years after his/her death.

The copyright does not have to be registered, but should an author want to bring a lawsuit against an infringer, it is a legal requirement. Although a copyright can be registered within five years of creation or publication, some important statutory damages may be lost by not registering a program within the first three months. The usual registration procedure can take some time, although the Copyright Office has been known to hurry that along in case of litigation.

Registering a Copyright

Registering a copyright is a simple procedure. Form TX is used for computer programs and for operating user manuals. This form and a kit with copyright law information is available, free of charge, by writing to the Copyright Office, Library of Congress, Washington, D.C. 20559. There are also two telephone hotlines, (202) 287-8700 for information and (202) 287-9100 to order registration forms.

The registration fee is \$10 and must include the two best copies of the program listing. Some programmers include only the first and last ten pages of the object code. If a program is lengthy, only the first twenty pages and the last twenty pages must be deposited. It would be wise to check with the Copyright Office for the latest requirements. Registration should be keyed to the first time the program ran and worked. Keep in mind that after a program is registered with the Copyright Office, it is available to the public. But that does not mean that anyone can copy it in its entirety. That would be considered infringement of copyright for which remedies are available to the author through the courts. If infringement is proven, damages can include recovery of full costs, rea-

sonable attorney's fees and additional damages which can run as high as \$50,000 if the program was registered during the first three months. In addition, if it can be proven that the copying was done willfully and for commercial advantage or gain, it can be considered a criminal act. Punishment then could be a fine of not more than \$10,000 or imprisonment for not more than one year or both.

Remember that infringement only takes place when an UNAUTHORIZED copy of a program is made. There is no law against making archival or backup copies of programs which have been purchased by an individual.

The Protection of Patenting

There are some circumstances when patent protection would be better than copyright because that gives the author the right to license and control the use of a patented device or process and prevents its use when independently developed by third parties.

While copyrights are granted for the life of the author plus 50 years, patents are designed to give the inventor rights for 17 years. Since a patent grants the owner monopoly rights, the acquisition can be expensive and time consuming because the legal hurdles a patentee must overcome are high. The applicant must prove many conditions to the satisfaction of the Patent

The copyright does not have to be registered, but should an author want to bring a lawsuit against an infringer, it is a legal requirement.

and Trademark Office or failing that, to the Customs and Patent Appeals or even to the Supreme Court.

At the present time, patenting a program which is not part of a system is almost impossible. Unless

Congress makes changes in the law as it stands now, a pure computer program cannot be accepted for a patent, but an inventor using computer programs in a machine or process can apply if all other criteria are met. An inventor has one year in which to file an application

The scale of piracy is unknown but claims have been made that there are about two and a half copies stolen for each one purchased.

after public disclosure, but in reality, it should be filed as quickly as possible. Unlike the nominal cost of copyright, patents can cost from \$5,000 to \$30,000 to draw up, obtain and defend.

Trade Secrets

Trade Secret protection is the best way to protect software in the opinion of some lawyers. But a lot of effort should go into keeping the information away from competitors. Keeping a trade secret confidential means taking precautions such as keeping the information under wraps at all times, having employees or co-workers sign agreements of confidentiality, etc. Evidence that no effort was made to treat the program as a trade secret could be damaging to a plaintiff in an infringement lawsuit.

Making a decision about whether a copyright, patent or trade secret registration is the best protection for a program is where a good copyright or patent attorney comes into the picture. The maze which the layman must travel takes the assistance of someone with enough expertise to understand the various laws and the way toward the greatest licensing value.

An attorney cannot be of much help unless the client is willing to be completely honest with him. The lawyer needs to know if elements were knowingly taken from a copy-

righted work. The differences between the previous work and enough expertise in its use should be sufficient to demonstrate that the work is a new creation. In an infringement lawsuit, the first line of defense is the availability of documentation and familiarity with the product.

The author will need the services of an attorney when a buyer is found. One attorney should never be used by both parties to a contract. The contract can include the sale of all rights, giving a buyer full control of the product and its use. Or the author can license the software to a distributor and control the ownership. Or he can attempt to sell or lease the program individually.

Stop the Floating Program

Sometimes, program writers lose control of their product long before it reaches the marketplace. If an original work is not protected carefully, it can easily get away from the author. If it is allowed to be used without permission, it can float from one person to another, and the rights and monetary reward are dissipated. Or someone looking over a program writer's shoulder can be sharp enough to spot a winner. It is not difficult to acquire the documentation when a number of people are involved and proving who actually owns the copyright can result in a nasty lawsuit. Having an agreement with anyone involved with a project is cheap insurance against later hassles.

Everyone has heard stories about people who worked on university or company computers and developed their own programs, later setting up their own successful companies. For those with a little expertise in the field, it is not too difficult to figure out how a program is written just by looking at the output and modifying programs has become commonplace these days.

The scale of piracy is unknown but claims have been made that there are about two and a half

copies stolen for each one purchased. And it is actually stealing when programs are copied without authorization. It isn't much different than if the diskette on which the program resides was stolen bodily from a computer store.

Most software distributors are ethical and it is unlikely the theft of documentation will take place when a program is submitted. Nevertheless, asking a publisher to sign a non-disclosure agreement before the code is given over makes good sense. Of course, it is important to know something about the integrity of a software publisher or distributor even before a consultation takes place.

There is no question that a dedicated infringer knows that pursuit of an infringement case can be costly and that damages often don't even cover the expenses. That provides quite a temptation to circumvent the law.

End User as Pirate

Yet, according to some sources, it is the end user who is the greatest infringer. He is the person who purchases a program, but does not read the agreement which comes with it. That agreement, which is normally signed by the end user and returned to the distributor (since that is the way a program can be updated) states that, except for archival or back-up copies, "the user shall make no copies of any kind unless specifically authorized to do so by the selling company." The user acknowledges that everything in the program is not only copyrighted, but also constitutes a trade secret and must be safeguarded by the end user.

Whose Is It?

Another situation in copyright protection can crop up when employers and employees disagree as to who owns a program which was written on the institution's time or equipment. In a case where the employee works up a project on his employer's computer or time, or writes a program at home, but gives

it a trial run at work, who owns the rights to the program?

If the employee has been hired as a programmer or computer consultant or user, there may be an obligation to share income from work created outside the workplace with employers. The attitude could be that employees are paid to be creative and the employer is entitled to any earnings which result from that creativity. It would appear that unless there is an agreement between employee and employer which spells out ownership of copyrights, even if the work is produced elsewhere, legal problems could arise.

Institutions are becoming very interested in any projects employees might work on at their expense. If a program is developed on a university or company computer by a programmer, who legally owns the finished product? An employee or student should understand exactly what rights or obligations are involved. If a contract has been signed or will be offered the individual should take time to read the fine print to make sure about any restrictions.

When a number of people work as a team on a project, again there should be a clear understanding of who owns what rights. If it is a work-for-hire situation and everyone has been employed to develop the program for an employer, it is the employer who owns the copyright.

On the other hand, when a team project is underway, everyone involved should have his interest defined in a formal agreement as to the relative right of each since this is a work of joint authorship. Anyone working on the program can register the copyright, although the law says that all authors shall share in the proceeds of any sale, licensing, etc.

The final determination as to software ownership and rights will eventually emerge through court decisions. It is up to each individual, whether writer or end user, to be aware of his legal limitations and

obligations. To avoid problems, be armed with as much knowledge as possible and when in doubt consult an attorney.

The Software Legal Handbook, by Paul S. Hoffman (Carnegie Press, Madison, N.J.), can be helpful in understanding more about copyright and trade secret procedures.

Martha Gore has published articles on software protection laws and copyright in publications like Popular Computing, Creative Computing and Softalk for the IBM Computer. She also teaches college courses for writers on copyright law, tax information and word processing.

The comments and opinions expressed in this article are the authors and are given for educational purposes only. They are not meant to be legal advice and specific legal questions should be referred to an attorney.

Setting up a WordStar COMFYL for keyboard entry

H. Lewis

Those who have emerged, advanced or plowed their way from the lowly state of Neophyte to that of Novice (the distinction is mine) and become reasonably facile in using the many facets of WordStar may now have reached a point where they are tired of repeatedly entering letter headings and salutations, proper tabbing and indentations. If you want the computer to do more of the work, read on.

Why bother setting up a COMFYL? Because it is a time saver. Also, it reduces the possibility of making errors in formatting and addressing. Finally, it is more cost effective from a business point of view when answering inquiries.

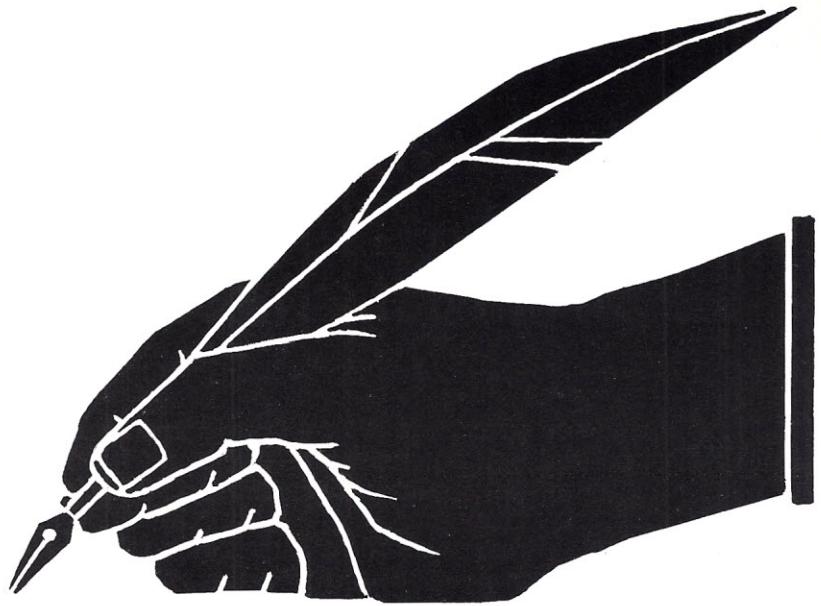

For my own needs I have installed this file on both sides of a disk that has been labeled CORRESPONDENCE. Even though it takes 2KB of memory, it is worth it, since a home-based business often necessitates writing individual letters as opposed to sending out form letters.

All the information concerning this command file is contained (more or less) in the MailMerge section of WordStar in either of the OCC handbooks. (If using the looseleaf binder, page 110, "Establishing a Constant Data Line," third paragraph, line six, should read &OURCOMPANY& instead of &ANYCOMPANY&.)

Setting up the command file will require the use of at least three dot commands: SET VARIABLE dot command .SV; ASKED FOR VARIABLE dot command .AV; and FILE INSERT command .FI. This file can also include print commands such as ^B, as well as heading and margin commands.

For my purposes I wanted the COMFYL to accomplish the following tasks:

- Print name and address
- Print date
- Ask for a business salutation, to include company, name, address, city/state and zip code

- Ask for the greeting
- Ask for and insert text from a document file

The following COMFYL accomplished those objectives.

```
.OP
.SV OURCOMPANY, EY-EZ-OR
.SV OURADDR, 4505 KITTIWAKE WAY
.SV OURADDR2, OCEANSIDE CA 92056
.SV DATE, April 8, 1983
.AV "           COMPANY:", COMPANY,
.AV "           NAME:", NAME,
.AV "           STREET:", STREET
.AV "           CITY and STATE:", CITYSTATE
.AV "           ZIPCODE:", ZIPCODE
.AV "           NAME1:", NAME1
.AV " NAME OF FILE TO PRINT:", DROPFILE
                               &OURCOMPANY&
                               &OURADDR&
                               &OURADDR2&
```

&DATE&

```
&COMPANY/O&
&NAME/O&
&STREET&
&CITYSTATE& &ZIPCODE/O&
```

Dear &NAME1&:

.FI &DROPFILE&

Sincerely Yours,

H.H.L.

.PA

The double commas following the company and name allow for omission of those fields without leaving a space in the salutation as long as the salutation fields contain the /o which means omit. Both must be present at the places designated for this feature to work. It took some experimenting to find where to put the commas because the manual doesn't spell it out for this application. However, the user guide states that this can be accomplished when using the READ VARIABLE dot command .RV.

Also, any print commands which follow the last dot command must be separated from the heading by at least two (2) lines. Otherwise the title ends up to the right of the date when printed out.

Once the COMFYL is set up, open a separate DOCUMENT file for the body of the letter, and save it to diskette. Invoke the MERGE-PRINT option, with the file name COMFYL, and enter the information requested from the keyboard. Start the printer.

Notice that a portion of the greeting "Dear" and the close have also been incorporated into the COMFYL. By the same token, a business heading could also be incorporated.

When using this command file, a file copy of the letter will not be saved unless the RETURN key is used and YES is answered to DISK FILE OUTPUT (Y/N) with a file name supplied. If only a print-out is needed from the printer, simply press ESC.

One last word: Position the date, close, heading, salutation, greeting and file insert &DROPFILE& at exactly the desired position. That is where they will be printed.

It may be necessary to experiment with a few trial sheets of paper to get the best arrangement.

Editor's note: Use "Number of copies" merge-print command to prevent "one-at-a-time" printing of letters. For example, if you have ten different addresses, specify "10" as the number of copies to merge-print. ☐

"The Great and Wonderful OZ Speaks!"

The Votrax™ Personal Speech System is an RS232 device which does amazing things for your Osborne®. Primarily it is a highly articulate speech synthesizer available for the Osborne®. It looks like a printer to the computer, so there are no great software hoops to jump through to get it to do the basics. Speech, music and sound effects are only an LPRINT statement away.

Businesses will appreciate spoken data transmission, narration of graphic displays and unmanned, oral product demonstrations. School children can receive comprehensive computer instruction and quizzing with software currently available. And then, late at night, you can make those adventure games come to life!

In addition, I imagine most of you have been thinking about a printer buffer to end your print time blues. Hold on! The Votrax™ PSS has a 3,500 character input buffer which is subdivisible for a printer buffer!

- ★ 64 amplitude levels.
- ★ 8 octave, 3 note music synthesis.
- ★ Simultaneous speech and music ability.
- ★ Software accessible real time clock!
- ★ Internal speaker and external jack.
- ★ 8 user definable alarms.
- ★ Oral power up and error prompting.

Portable Software offers the following package:

- ★ Votrax™ PSS
- ★ Cable (you'll need one)
- ★ "OSMOUTH" Software to easily access Votrax

\$400.00 plus \$4.00 shipping

O-4 Joy Interface

\$39.95

An interface to any Atari joystick, compatible with ANY software which uses the Osborne arrows keys? Wow! You can use this interface with WordStar™, SuperCalc™, dBase™, AND any game which uses the arrow keys for movement and the space bar to fire. This interface requires NO additional software. It piggy backs in the keyboard port of the Osborne , and looks like you're pushing down the arrow keys while allowing full and simultaneous access to the keyboard.

Printer Special

We would like to change your mind about printers. We want to introduce you to the Gemini Printer from Star Micronics. It has ALL the print features of the Epson with Graftrax PLUS:

- ★ 100 CPS! (to Epson's 80)
- ★ 2.3 K Memory buffer! (to Epson's 0)
- ★ 100% duty cycle (no waiting!)
- ★ 6 Month Warranty! (3 mo. on print head)
- ★ Friction, Tractor, or Roll Feed Standard
- ★ Uses \$1.50 Ribbon (to Epson's \$12)

Our price for the Gemini INCLUDES a cable configured for your Osborne, the Gemini 10 (10" carriage) and our "ARTIST II" program which will allow you to easily access the Osborne screen graphics and print them just as they appear on the screen. Graphs, charts and drawings are quick and easy. This package sells for hundreds less than most places charge for an Epson alone.

\$499 includes: Gemini 10
Cable for Osborne IEEE
"ARTIST II" Software for graphics access

Key-Whiz - Here is an easy to manage sorter for your data lists. Takes you Mail-Merge files and searches or sorts them to your specifications. Great for easily keeping track of bibliographies, membership lists with special codes, any keyed data. For instance, would generate a file of all members who are over a certain age, but haven't paid their dues this year. Fast and easy! \$19.95

216 Penn Avenue
Oxford, Pennsylvania 19363

TECHNICAL TIPS

Cables, tables, labels

Automate Your WordStar Index

J. Bruce Francis

John Wiseman's tip about using WordStar to keep an index of file names (Apr/May 1983) was most useful. But the necessity of bringing up the index file, blocking it, then writing the block to disk again before beginning to use the new file was bothersome.

To make the process more convenient, connect it to two function keys as follows:

1. On Drive A, create an index file. (I named mine X to save keystrokes.)
2. Set up function key #9 with this code:

`^KRA:X^QC<cr>`

Hit ESC ESC to store it. Function ^9 reads the index file (X) from A drive, moves the cursor to the end of the file, and adds a carriage return for positioning to type information about the new file.

3. Set up function key #0 with this code:

`^QR^KB^QC^KK^KW^R`

Hit ESC ESC to store it. Function ^0 moves the cursor to the beginning of the index file block at the head of the new file (^QR), blocks the beginning (^KB), moves the cursor to the end of the new information (^QC), blocks the end (^KK), calls for a block write (^KW) and inserts the name of the index file as the destination (^R). At this point the old index file will ask to be overwritten. Type Y and the new informa-

tion will be saved as last item in the index file. When the cursor returns, type ^KY to remove the block and the cursor will be positioned at the head of the new file to begin.

Caution: Be careful about including within function ^0 the ability to overwrite (Y) and ^KY to remove the block. (I tried it and found while preparing an entirely different file that if I touched ^0 by mistake, I wrote the entire file to A:X and wiped out the index.)

Once the function keys are set up and the index file (X) is prepared and stored on Drive A, here's how to proceed:

Boot WordStar

Edit a (D)ocument or (N)on-document file

With the cursor at the beginning of the file, type ^9

Type in the new file information, and type ^0

At the prompt, type Y to overwrite

When the cursor returns, begin new file

With the convenience of this modification to

Wiseman's excellent tip, keeping track of files will be a breeze.

Square Roots with dBasell

Doug Hurst

A lot of programs out there work in conjunction with dBase II to perform various functions not resident in dBase as supplied. Those unable or unwilling to put out for such programs may use this article as the start

of at least a partial solution. The following program is for accomplishing the square root function in dBase II command language. It is submitted as a sub-module, although it could be used as part of a main program.

The value to be rooted is stored as X in one of the 64 available memory locations prior to entering the sub-module. After the sub-module has acted on it, the output will be stored as Y (although it could be stored back into X to maintain program integrity after the calculations are complete).

```
* SQSUB.CMD
* SQUARE ROOT SUB-ROUTINE FOR dBASE II
STORE X*.5 TO Y
STORE 0 TO Z
STORE T TO TRUE
DO WHILE TRUE=T
* ENTER THE NEXT TWO LINES ONLY IF YOU
* WANT TO SEE THE SQUARE ROOT OPERATION
* STEP BY STEP. IF USED, OMIT THE ( )'s.
(DISPLAY MEMORY)
(WAIT)
STORE (X/Y-Y)*.5 TO W
* W=0 SHOULD WORK BUT -0.0000001 USED
IF W>=-0.0000001 .OR. W=Z
    STORE F TO TRUE
    ELSE
        STORE Y+W TO Y
        STORE W TO Z
ENDIF
ENDDO
RETURN
```

To see the program actually work, use it in conjunction with the following sample program. Simply enter both programs on a disk in drive B, using either WordStar (N option) or dBase II's MODIFY COMMAND mode. With dBase in drive A, type DO B:SQROOT from the dBase '' prompt or DBASE B:SQROOT from the CP/M 'A>' prompt.

```
* SQROOT.CMD
* SAMPLE (ONLY) PROGRAM TO SHOW HOW
* SQSUB.CMD OPERATES.
SET TALK OFF
ERASE
?"TYPE IN THE NUMBER YOU WANT TO FIND
?"THE SQUARE ROOT OF. "
INPUT TO X
DO B:SQSUB
ENDDO
* IF X MUST MAINTAIN ITS VARIABLE
* ASSIGNMENT AFTER ROOTING, ENTER THE
* FOLLOWING LINE. [OMIT ( )'s]
(STORE Y TO X)
ERASE
SET FORMAT TO SCREEN
@ 1,1 SAY "THE SQUARE ROOT OF"
@ 1,20 GET X PICTURE '999999.9999'
@ 1,32 SAY ' IS '
@ 1,36 GET Y PICTURE '9999.9999'
@ 3,1 SAY 'PRESS ANY KEY TO DO'
@ 4,4 SAY 'ANOTHER ROOT'
WAIT
DO B:SQROOT
RETURN
```

There is no reference for this except for those who want to lower themselves to reading a TRS-80 Level I Basic manual. Since Level I Basic has no built-in SQR function (among others), they list several subroutines which can be used. This is a conversion from one of those subroutines.

Note: I wholeheartedly concur with the user's manual recommendation of renaming the file DBASE.COM to DO.COM. This allows direct execution of command files with the DO X:filename from either CP/M or dBase.

Executive IEEE to Centronics Cable

Brad Baldwin

A cable can no doubt be designed several ways. For the Executive, I used the common 26-wire flat ribbon cable and placed empty wires between data lines with two signal grounds between strobe, busy, and select lines.

This design offers more than enough shielding and separation to prevent impedance and inductance build-up for printer cables under 10 feet. (Empty wires could be soldered together and attached to available signal ground points if the application calls for using a longer cable.) Because soldered connections are used at both ends of the cable, wires are easily manipulated to achieve proper shielding.

I chose the flat ribbon cable over round cable only for its physical flexibility; there is no difference in quality. The pin-out for a round cable with 11 paired returns to ground would be different only in where the grounds were connected.

The IEEE connector should be the kind where the cable comes straight out rather than bending 90 degrees.

Cable: 26 pin flat ribbon cable
IEEE connector: soldered, straight out exit

Executive IEEE 24 pin	Centronics 36 pin
1 -----	2 Data 1
2 -----	3 Data 2
3 -----	4 Data 3
4 -----	5 Data 4
13 -----	6 Data 5
14 -----	7 Data 6
15 -----	8 Data 7
16 -----	9 Data 8
18 -----	19 Signal ground
6 -----	1 Strobe (Data valid)
19 -----	20 Signal ground
20 -----	21 Signal ground
8 -----	11 Busy (No data accepted)
21 -----	22 Signal ground
22 -----	23 Signal ground
10 -----	13 Select (Service request)
23 -----	24 Signal ground

HEXDHEX

John E. Cunio

The accompanying short program can be a useful utility in simplifying hexadecimal-to-decimal and decimal-to-hexadecimal number conversions. It makes use of MBASIC's built-in HEX\$(x) function for converting hex-to-dec. Although it isn't documented in either the Osborne *User's Guide* or Microsoft's *MBASIC Guide*, the command PRINT &Hxxxx will return the decimal equivalent of the argument xxxx. For numbers higher than &H7FFF (32737 dec) a negative value is returned that must be algebraically added to 65536 to obtain the actual decimal value.

The program should be saved in ASCII format using the [,A] option. This allows it to be loaded during programming using the MERGE command. The STOP in line 10030 allows debugging and trial RUNs of the lower numbered program without crashing into HEXDHEX.

```
10000 ' ***** HEXDHEX *****  
10010 ' By John E. Cunio  
10020 '  
10030 STOP      'Stops lower programs during  
10040           'trial runs  
10050 PRINT CHR$(26)  
10060 PRINT  
10070 PRINT "ENTER 'H' FOR HEX/DEC OR 'D' FOR"  
10080 PRINT "DEC/HEX."  
10090 C$ = INPUT$(1)  
10100 IF C$ = "H" GOTO 10140  
10110 IF C$ = "D" GOTO 10190  
10120 IF C$ = "" GOTO 10120 ELSE 10070  
10130 PRINT CHR$(26)  
10140 PRINT:PRINT  
10150 INPUT "ENTER HEX NUMBER (&H----)";X  
10160 IF SGN (X)=-1 THEN X=65536! (X) ELSE 10170  
10170 PRINT "           = ";X "DEC."  
10180 GOTO 10060  
10190 PRINT:PRINT  
10200 INPUT "ENTER DECIMAL NUMBER ( <65536 )";X  
10210 Y$ = HEX$(X)  
10220 PRINT "           =&H";Y$  
10230 GOTO 10060
```

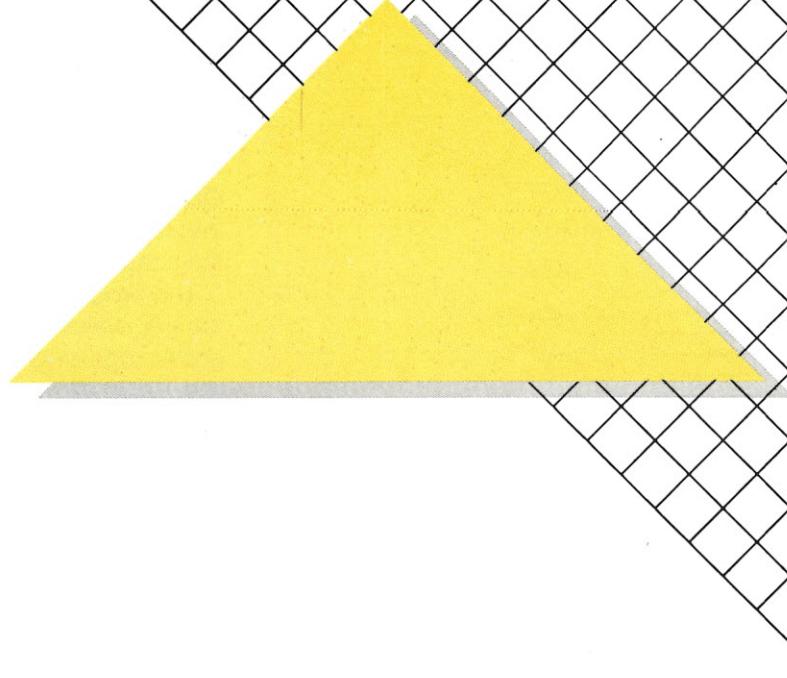

Mailing Labels with dBase II

Julia Ann Kosnik

Here is a simple example of how to print mailing labels using dBase II. The first step is to create a database. This procedure is explained on pages 14–17 of the dBase II manual. For this example, create a structure on the B drive exactly like the one below. Call the database LIST. Then enter a few names and addresses.

```
FIRST,C,10  
LAST,C,15  
STREET,C,15  
CITY,C,15  
STATE,C,2  
ZIP,C,5
```

Once the structure is created and names and addresses entered, type in QUIT at the prompt.

The next step is to create a command file. This procedure entails the following steps:

1. Put WordStar in drive A and leave diskette with database file in drive B.
2. Load WordStar and log onto B drive.
3. Type N to enter non-document mode of WordStar.
4. Edit the file LABEL.CMD. Note the .CMD extension. Remember that dBase will not recognize a command file without a .CMD extension.
5. Type in the following:

```
SET TALK OFF
USE B:LIST
GOTO TOP
SET PRINT ON
DO WHILE .NOT. EOF
? TRIM(FIRST),LAST
? STREET
? TRIM(CITY),",",STATE,ZIP
?
?
?
SKIP
ENDDO
SET PRINT OFF
```

6. Please note that the question marks are print statements, very similar to MBASIC. The question marks with no information following tell the computer to leave blank spaces. Adjust the number of spaces in accordance with label size by adding or deleting question marks as needed.

7. Save this program with ^KD or ^KX.
8. Place dBase II in drive A, leaving diskette with LIST.DBF and LABEL.CMD in drive B. Hit return.
9. At the prompt, type in the following and hit return:
.DO B:LABEL

Congratulations! You did it.

Please note: the most frequent mistake with this program is a failure to match the field names in the database with the field names in the command file. Do not let this happen to you.

These books should contribute to further dBase II adventures:

From Newport Beach to New Delhi, Easy View is Number 1.

Our Customers are proving it!

"Some of my colleagues have fresnel lens magnifiers and were ready to scrap them after seeing the superior clarity of my Easy View," says Ohio anthropology professor Dr. Melvin Goldstein. "Easy View is a must for the 80 column format." Dr. Goldstein should know—his Osborne™ and Easy View travel with him to India.

The Stockton Osborne™ group really put Easy View to the test. Group members compared Easy View and three other computer screen magnifiers. Group treasurer Rod Payne reports, "Ninety percent of those

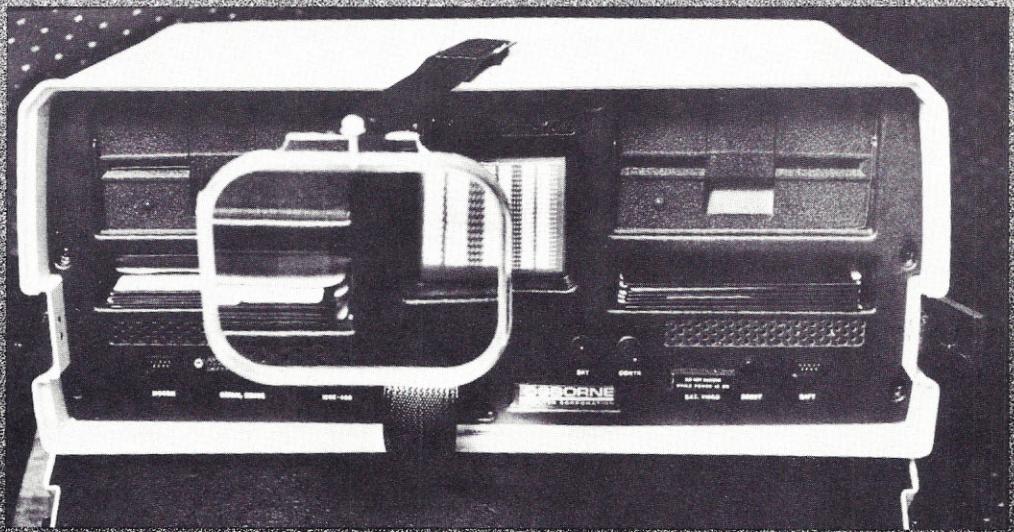

attending saw the need for a portable screen magnifier. We preferred Easy View for its durability, portability, strong magnification, and Bausch & Lomb optics."

We appreciate the words of praise and we plan to go on earning them—with the best screen magnifier made for the Osborne™ computer. Prove it to yourself. With a 50% screen enlargement, portability, and the precision and clarity of Bausch & Lomb optics, Easy View is No. 1. And the price is **only \$31.95** (including shipping in the U.S.).

So try out Easy View. We'll send you a **free graphics program** for your Osborne™, "DRAW 3," to get you started. It's written in MBASIC™, ready for you to enter onto diskette. And "DRAW 3" lets you make use of your computer's built-in graphics capacity for stationary or moving display, without being a programmer. This program is yours free for trying Easy View for 30 days. If Easy View doesn't prove itself to you within 30 days, return it for a full refund—but keep "DRAW 3" compliments of Easy View.

Our customers say we're Number 1!

Using SUBMIT is Easy

Verne R. Walrafen

Having a poor memory and a very short attention span I found the very simple process of disk initialization terribly error prone.

My solution was to create a file "INIT.SUB" on my utility disk as follows:

- a.) STAT B:.*
- b.) COPY
- c.) SYSGEN
- d.) SAVE 0 B:----#\$3
- e.) SAVE 0 B:---VERNE.W
- f.) PIP B:=A:.COM[V]
- g.) PIP B:AUTOST.COM =
A:AUTO\$4.COM[V]
- h.) PIP B:=A:PIP.COM[V]
- i.) STAT B:.* \$1
- j.) STAT B:.COM \$2
- k.) / B:

(INIT.SUB was created using WordStar and does not include the small reference letters, such as a, that I am using in this memorandum for reference purposes.)

I used SETUP to give a function key the first part of my command string:

```
SUBMIT INIT $R/O $SYS --- --- <CR>
(1) (1) (1) (1) (2) (3) (4)
```

- (1) Command string from function key.
- (2) Disk serial number argument, e.g., 001.
- (3) Autostart routine argument, e.g., DATA or GAME.
- (4) Return to initiate procedure.

Warning: Once SUBMIT takes control it insists on going all the way. Even the RESET button is of no particular salvation as SUBMIT simply waits around till you reboot its disk and off it goes again. I just remove the disk in drive B and continue to respond to SUBMIT's messages with <RETURN> till it runs its course. There are certain points where <ESC> will terminate SUBMIT and return you to CP/M but I'm never certain where or when to "hit it" so I stick with <RETURN>.

INIT.SUB investigated

I am certain that you will not want to copy my initialization procedure exactly but if I tell you what I did then you can change it to suit yourself:

a) **STAT B:.*** will show you what is already on the disk that you are getting ready to trash. I have been known to grab the wrong disk upon occasion even if you haven't.

b) **COPY** allows you the option of formatting any new disk and a simple <RETURN> permits you to skip this option.

c) **SYSGEN** places CP/M on the disk being initialized. I do not have any disks that will not "cold boot."

d) **SAVE 0 B:----#\$3** places a serial number on my disk in the file directory which I also place on a label on the outside.

e) **SAVE 0 B:---VERNE.W** places my name similarly. Neither of these actions use any disk space.

f) **PIP B:=A:.COM[V]** brings a super directory routine aboard.

g) **PIP B:AUTOST.COM =
A:AUTO\$4.COM[V]** brings my choice of autostart routines aboard. If I later decide to load a routine that has its own autostart routine I can "ERA" this routine easily.

h) **PIP B:=A:PIP.COM[V]** brings PIP.COM aboard which I use all the time to shuffle data files around between disks. Should I later decide I need the disk space for data files "ERA" is still available.

i) **STAT B:.* \$1** write protects all files on the new disk. We are forced to use an argument here, \$1, because SUBMIT gets excited and becomes totally unreasonable when it encounters the dollar sign on \$R/O.

j) **STAT B:.COM \$2** "hides" my super directory (for no particularly good reason) from itself.

k) / B: shows me what I did. I always feel more comfortable when I have visual confirmation of the success of a process.

Editor's Note: See "Technical Tips" in the Apr/May 1983 Portable Companion for further information on SUBMIT patches.

A Cursor Routine For BASIC

Billy Gomban

When working with random files, record lengths are fixed, therefore the amount of character input will be limited to the length of the string used. Data will be lost if the user

UserGroups

enters more characters than allowed and if you input the data into a record and then retrieve it, you will notice the loss of data. Here's a routine that will allow the user to know exactly how much string space is available. You enter one character for each asterisk displayed on the screen.

LINE 10: Z = the actual space allowed for the name. Don't forget the two spaces.

LINE 20: Takes you to the cursor routine.

LINE 30: Is the string label used, a maximum of 30 characters allowed.

LINES 40-60: is the same as lines 10-30

LINES 70-80: Prints out the inputted data.

LINES 1000-1100: Is the actual routine.

SAMPLE RUN:

What is your name? Mr. John G. Doe *****

What is your telephone number? *****

THE PROGRAM

```
10 Z=30:PRINT"What is your name ";  
20 GOSUB 1000  
30 INPUT N$  
40 Z=8:PRINT"What is your telephone number ";  
50 GOSUB 1000  
60 INPUT T$  
65 PRINT  
70 PRINT"NAME ",N$  
80 PRINT"TELE.",T$  
90 PRINT: GOTO 10  
91 REM  
95 ' ' = SAME AS REM  
  
1000"ACTUAL ROUTINE  
1030 FOR I=1 TO Z  
1035 IF S% = 0 THEN PRINT "*";  
1040 IF S% THEN PRINT CHR$(8);  
1060 NEXT I  
1070 IF S% THEN 1090  
1080 S% = 1:Z = Z + 2:GOTO 1030  
1090 S% = 0  
1100 RETURN
```

CPMPower

Pavel Breder

CPMPower.COM version 2.41 is the predecessor of the program called POWER! presently being sold at retail, POWER! is version 3.33 and includes several new commands. CPMPower, while lacking these commands, is public domain and free.

Basically, CPMPower is a front end for CP/M. This means that it simplifies the use of the operating system, in that you never need remember the syntax for the many CP/M commands such as PIP, STAT, REN, etc.

Load CPMPower and type "?" You will get a listing of available commands. From this level you may do housekeeping duties on files and run programs. The specific commands are detailed below.

COPY

This command does just what it says. It copies individual files just like PIP. Unlike PIP, it is limited to copying between disks and USER numbers. First log onto the disk you wish to copy from (A: or B:). Then simply type COPY.

A listing of files on that diskette will appear with numbers preceding

them. Type the number of the file(s) you wish to have copied (place a space between numbers) and the program will prompt you through the copy session. See LOG on how to change the prompt sequence as well as how to have the copies verified.

CRT

I have not been able to determine the use of this command.

DISK

This command gives the statistics of the disk, showing details like sector organization and the like. CPMPower was designed for all CP/M computers, so this information would be useful if we did not already have it in our manuals.

EXIT

Just what it says: Back to CP/M.

FILETRAN™ MAKES IT POSSIBLE!

FILETRAN™ for the Osborne, featuring high-speed TRSDOS-to-CP/M translations and the new CP/M-to-CP/M transfers, makes your Osborne instantly compatible with all the most popular disk formats. And, since all the formats haven't been invented yet, FILETRAN™ uses an Alien format description file that we will be updating — or that you can update yourself. For more information, call us!

ACCOUNTING

A professional-quality system at a reasonable price.

Don't let the low price fool you. Desktop Accountant™ is not a "cheap" accounting system, only inexpensive. That's because original development costs were recovered years ago allowing us to sell an excellent product in high volume at low prices and still earn a fair profit. This time-tested, reliable software was designed and written in 1975 for small-to-medium sized businesses. Since then it has successfully proven itself in well over 5,000 companies in all 50 states and in 13 foreign countries. It is also used by hundreds of attorneys, bookkeepers, accountants and CPA's, including the regional offices of several famous "Big Eight" accounting firms! Order yours today with complete confidence.

Complete Package of Software, Training Aids, Manuals, and Users' Newsletters:
ONLY \$395
IBM-PC format \$495

Desktop Accountant™

FULL-FEATURE, FULLY-INTEGRATED ACCOUNTING SYSTEM

Your Bookkeeper, Accountant, and Banker will love you for installing this great system!

- For portable, personal, & office micros
- Each module may be run "stand-alone" or fully-integrated to post automatically to General Ledger
- Flexible Chart of Accounts
- Friendly and fully menu-driven
- System-prompted data entry
- On-line data file updating
- Complete, detailed audit trails
- Instant access to all information
- Produces 42 reports & documents
- Prior Year Comparisons
- Income Statements for up to 99 Depts.
- Comprehensive customer & vendor files
- Automatic periodic billing option
- Automatic end-of-month file backup
- Automatic and manual check writing
- Maintains open item A/R & A/P
- Detailed A/R & A/P Aging Reports
- Produces Cash Requirements Report ...an excellent cash management tool!
- 50 State and 20 local Tax Tables
- Popular year-to-date paycheck stubs
- Includes 50,000+ lines of Source Code
- Compatible with floppy & hard disk
- A truly professional system!

Upgrade Your Osborne with a high-speed, high-capacity Trantor™ hard disk system

For greater speed and vastly increased capacity, upgrade your system with the high-performance Trantor hard disk unit. You get 3 to 5 times increased speed and 50 to 150 times increased storage capacity. And your single, centralized hard disk replaces up to 150 loose floppies. It arrives ready-to-use after a simple 5 minute installation procedure. Available in 5, 10, and 15 megabyte capacities, Trantor hard disk systems consistently win exceptionally high reviewers' ratings. Order a Trantor hard disk system and turn your portable computer into a powerful office work station. Prices start at under \$2000. **SPECIAL SAVINGS OFFER:** Buy any Trantor hard disk unit and we'll include our complete Desktop Accountant™ System, **PLUS** our Desktop Inventory Manager™, both for only \$150!

Our Desktop Inventory Manager™

Our excellent stand-alone Inventory Management System is probably the most comprehensive available in the micro market today for retail and wholesale businesses.

- Records current inventory levels on an item-by-item basis.
- Multi-location/multi-department applications.
- Quantity capacity to 999,999,999.999.
- Inquiry function uses partial item keys.
- All reports printed by department, location, or vendor and can include entire data file or any subset.
- Produces 11 management information reports.
- Tracks sales, receipts, returns and reserves.
- Stores and sells fractional units.
- User-defined history records.
- Item keys can be any printable character.
- Complete audit trail.

PRICE: \$295, includes full support and 220 pg. manual. Not available for single density systems.

UserGroups

TYPE TYPEA TYPEH TYPEX

All four TYPES work in a way that is similar to the standard TYPE. The difference is in the format. Again simply type the command and CPMPOWER feeds you a list of numbers. Type one or all of the numbers, separated by spaces, and you will be prompted through the display of the files.

CHECK

Checksum analysis. This command will run an algorithm over your files and return a number. If the number matches a control number, the files are the same. Useful for determining if your *.BAK files are actually backups or merely similar files of the same name, CHECK will let you know. Then the problem is figuring out which is the most recent.

RUN

Run a program. CPMPOWER is a front end, meaning that you need not exit to access any other programs. Type RUN, get the list of numbers and away you go.

SETDIR

Similar to the STAT command, but easier. Will set your SYS files to type that will be displayed by DIR.

SETWRITE

Restores read-only files to read and write files.

LOG

Very useful command. Type LOG sends you to a separate menu. Five toggles are available there.

1. You may select what CPM-POWER should do when encountering duplicate files (you may overlay, backup, ask for disposition, or skip.)

2. Also, you may set the number of columns in the DIR listing.

3. The third function selects whether the program will ask for verification of selections within the main program or go on with the instruction as given.

4. This toggle selects whether the program reads after writing a file (as when copying) to check for errors.

5. This toggle will allow system files to be shown on listings.

Finally, the bottom of the LOG menu indicates the present USER number and the present USER DESTINATION number. Both of these

designations may be changed from the main menu.

USER

Change user number. Simply type USER n where "n" is an allowed decimal value user number.

INFO

At one time, this program apparently came with an information file. I got this program from the Suncoast Osborne User's Group out of Tampa, Florida. I checked back, but they haven't got the info file either. Presently, this documentation file will be displayed by typing INFO. (If you typed INFO before reading the documentation then disregard these past two sentences.)

TEST

Very useful command. Log to a disk with A: or B: and then type TEST. It will run over the disk, locate physically bad sectors and lock them out from the directory. These sectors are also set read-only to prevent someone from accidentally erasing them and then wrecking data and then trying to write across them. Very similar to FINDBAD.COM in the library, except it's part of an integrated package.

FEATURED PROGRAM

FILE-IT \$49.95

Data base manager excellent for inventories, lists, catalogs, and record keeping. Just design your form directly on the screen, and you're ready to begin entering data. We use File-It for all our invoicing.

- Multi-page records can hold up to 232 fields. Entry limited only by screen boundaries. Type anywhere on the display! Up to eight pages per record.
- No need to declare a record size. If you need more room, just add another page.
- "Query-by-example" method makes selection of records quick and easy.
- Sort on any field in alphabetic or numeric order.
- Generates professional-looking reports. Totals any of ten columns giving minimum, maximum, average, and count.
- Fast search (2-3 seconds) on key field.

ALSO AVAILABLE

MAIL-IT mailing list manager \$49.95

Dealer inquiries invited.

*Mail-Merge is a trademark of MicroPro Int.

UserGroups

ERA

Same as the CP/M command. It erases files, but in the same format of much of CPMPOWER. Type ERA and get the number of the file(s) you wish erased. Type those number(s) and they are no more.

JMP

Useful for assemblers. Lets you JMP to any memory location. EXEC, below, is similar. I don't understand either. When any of you hackers figure these out, I would be pleased to know how they are used.

SETSYS

Set a file to SYS status. Can't be read by the DIR command.

DIR

Standard DIR command. No file statistics. However, see LOG on how to change the number of display columns.

DEST

Allows transfer of files from one USER location to another. The format is the same as USER, above.

STAT

Very boring STAT command. Just whether R/W or R/O, SYS or DIR.

RECLAIM

Another very helpful command, and one with no counterpart in the OSBUG library that I know of. This command recovers erased files. Previously this could be done only by getting onto the disk with DU and changing the end of file byte in the directory. RECLAIM does this for you and prompts you through all abandoned listings on the directory tracks. So long as you do not write anything to the disk after erasing your file, this utility will recover the file. Standard format: log to the disk (A: or B:), then type RECLAIM. You will be prompted. Just answer yes or no.

SIZE

Shows total of tracks and sectors used by a file.

REN

Same as CP/M command of same name. Only difference is the convenience of dealing with numbered files instead of having to worry about typing errors.

EXEC

Allows execution of a resident program from any location, I think.

When anybody knows for sure, let me know.

SETREAD

Set your files to read only with this command. SETWRITE, above, undoes it.

Reprinted from OSBUG, the newsletter of the Osborne Business User's Group, Portland, Oregon.

dBase II Anyone???

John Gaudio

Lots of you have gotten something called dBase II with your Osborne, and the big questions I hear are "What is it?...What does it do?...[and] "How do I make it work?" Well, here goes.

Just as SuperCalc lets you work with numbers, and WordStar allows you to manipulate words, dBase II is a program that lets you keep track of information (data). This data might be a list of names, addresses, and phone numbers, information on your stamp collection, a full-blown accounting system, or whatever.

dBase II is like a sophisticated cardfile system with all the sorting and cross-referencing done for you. Consider the stamp collection

UserGroups

for example. In a manual system you would have an index card for each stamp in the collection. On that card you'd put the name of the stamp, the volume/page on which it's found, the date it was issued, the country that issued it, the date you acquired it, the price you paid for it, the date it was last appraised, and the appraised value. That's eight pieces of information about a particular stamp on a particular file card.

This is easy to understand. The hard part is handling the actual cards. If you want a list of your stamps sorted in alphabetical order by name, you must first manually sort the cards, and then type up the list. If you want lists by country you again take each card, one at a time, and put it into a pile of cards for that country. If you want to know the value of volume 12 of your collection, you go through the entire set of cards, separate those that refer to volume 12, and then add up the current appraisals found on those separated cards.

If your collection consists of 10 or 12 stamps, then this is all pretty easy to do. If you have 50 to 100 stamps it's inconvenient, but workable. If you've got over a thousand stamps then I hope you have lots and lots of time, a small staff, or

something like dBase II.

dBase II handles information stored on a diskette, just as you or your staff would handle the same information on index cards. In dBase we call the cards records. For our example each stamp would be described by one record, and that record would hold the same information we put on the index card. Each piece of information, like the stamp's name for example, is stored as one entry on that record, and that entry is called a field. Thus to put our example on dBase II we'd use one record (like a file card) with 8 fields (entries) for each stamp in the collection. The fields would be:

1: NAME	Stamp name
2: LOCATION	Volume/page where stamp is kept
3: ISSUED	Issue date
4: COUNTRY	Country that issued stamp
5: ACQUIRED	Date acquired
6: COST	Acquisition cost
7: APPRAISED	Date of last appraisal
8: VALUE	Value at last appraisal

Just as every card has a space for each of these entries, every record has a field for each entry. dBase II allows up to 32 fields in a record, and over 60,000 records in a file.

(Available disk space does limit the number of records in the database, but with hard disks like the Trantor available on the O-1 you can store a lot of records.)

The dBase II program helps you to set up the fields for each record, lets you enter the information into those fields, lets you sort the records on any field, and much, much more. The operations described in the manual example are all easily accomplished with dBase, once you've learned to use several of the standard commands. With a little more work you'll learn how several commands can be stored in a file, and executed when the user selects the appropriate option from a menu. In this case you're actually writing programs that can be so easy to use that a temporary secretary with no computer experience can be adding and modifying information, printing reports, and more, with less than an hour of instruction, often with only a few minutes of help to get started.

Take the time to learn it. You'll get that time back many, many times over.

Osborne Guide

Keith N. Egger

Osborne User's Guide: Applications and Programming, by Leo Conrad, Lance Zimmerman and Larry J. Goldstein. 1983, Robert J. Brady Co.

Osborne User's Guide successfully addresses a number of weaknesses in the Osborne manual. First it presents a simple overview of the hardware, software and operating system that comes with the O-1. This information is useful to the beginner—but don't expect a detailed description of Wordstar or Supercalc. Where the book shines is in describing MBASIC for the novice programmer. About two thirds of the book is devoted to describing MBASIC structure, functions, and commands. The text is easy to understand and takes the reader by the hand through numerous examples.

One nice feature is the use of problem exercises to "test your understanding" of the subject being discussed. The subject matter takes you step by step through variables, arrays, loops, data input, random number generation, and subroutines. There is a chapter on editing and debugging programs and a

useful chapter on sequential and random access disk files. The final part of the book is devoted to more complex programming subjects: string variables, computer simulation, and programming for higher mathematics. One nice addition is a chapter on graphics for the O-1. This chapter outlines the graphics characters available and how to print them. A sample program to draw bar charts is listed.

Osborne User's Guide is a valuable book for the novice program-

mer. The approach is simple and clear, and provides numerous examples to demonstrate the subjects discussed. Problems and answers are provided for the student to work through.

This is a good book for those who have "computerphobia" when it comes to programming.

TAKE CONTROL...IT'S A MATTER OF \$ AND SENSE

Control money matters with HOMEBUGET

HOMEBUGET \$14.95

HOMEBUGET...a money manager
Homebudget helps you create a budget based on your income, fixed expenses and your personal preferences in spending. It then keeps track of checks, deposits, credit card and cash purchases and files them all in monthly data files. This automatically adds purchases to the appropriate budget category and subtracts them from the goal you have set. It will produce a complete statement at any time, for any month/year (printer is handy, but not required). Invaluable at tax time, Homebudget lists likely deductions first on statements, and known deductions can be flagged.

Mbasic® is a trademark of Microsoft

HOMEBUGET...a learning tool

A special tutorial listing includes a line-by-line explanation of how the program works, referenced to a standard text on programming basic data files. It is written in Mbasic™, making it easy to understand and customize. Modular stand-alone subroutines can be used in other programs without retyping. It uses Mbasic™ in a way that leaves the B drive completely free for data files. A special file-saver utility allows you to rescue your valuable files even if you lose power during a file transfer.

HOMEBUGET...affordable \$14.95
Solid software value, simple to use, and a learning tool too. Includes manual, disk and special tutorial listing.

PUBLIC DOMAIN PACKAGE

\$90

This package contains TEN DISKETTE SIDES absolutely packed with great programs! Many are from the CP/M users group material, with some altered programs formatted especially for the OSBORNE 1 and some new material, all of it in the public domain, available at \$20 each, or \$90 for the entire package, including:

- Modem 7
- Utility Programs
- Calendar File
- Master Catalogue
- Z-80 Assembler
- Math Package
- Z-80 Disassembler
- Disk Nurse
- Original Adventure
- Castle & CIA Adventures

BONUS: OSBORNE® ACCOUNTING GENERAL LEDGER (four diskette sides configured for the OSBORNE 1)
★ FREE ★ Until July 4th, 1983.

OTHER OFFERINGS

The Processed Word

Keeping track

Barbara Elman

Like many people who write, my mental filing cabinet works in random access fashion. It often takes more than 64K of internal memory to locate essential data hidden within my brain cells. I can easily remember my birthday, my name and my address, but trying to recall that brilliant idea for a new article which flashed through my memory banks last week may take some digging. Likewise, remembering when I last sent a query to the editor of *Portable Companion* is at best a shot in the dark.

Fortunately, I have computerized my writing habits as well as my writing itself, with the help of two programs that keep track of things for me. Both are technically "database managers," software I used to think was for accountants and business managers. Since my database is composed of words and ideas rather than inventory data or financial details, I was surprised to find these programs could unmuddle my thinking.

Here's how it used to be:
Before I sat down in front of my Osborne's tiny green screen, I

needed to organize the research material and ideas I had collected to feed my hungry imagination. That material was far too elusive just when I wanted to use it: bits of paper torn from magazines, notes scribbled on edges of yellow pads, a book someone borrowed last week, a magazine article that appeared around Thanksgiving—all outside immediate reach.

I finally took all the cardboard boxes which were hidden away in my closet and emptied their contents. Sure enough, there were the articles and clippings I had been looking for! I gently placed them in clearly marked file folders, declaring never to toss a note into a cardboard box again. But when I went to find a particular piece on "international telecommunications," I had to remember whether it had gone into the "telecommunications" file or the "international" file, or some obscure place that had made sense at the time.

I also read more magazines than anyone I know (my mailman is stoop-shouldered from carrying them upstairs to my door), and I

always stick them on the bookshelf haphazardly when I'm done. Inevitably, page corners are turned down and paragraphs or items circled in red so I can "easily" find the material later, but then I forget where to look it up when "later" has become "now."

Last but far from least in this saga of disorganized organization, are those bright ideas I get while walking through the grocery store, or browsing in bookstores, or talking on the phone to my sweetheart. I often scribble a note to myself (usually illegible, since word processing has ruined my handwriting), certain I'll recall the beauty of the plan from this shorthand version, and tuck it away for safekeeping. Sometimes it even crawls into my "idea" file folder, there to moulder away waiting for my attention.

Each of these examples is graphic but true, and I despaired having to change my ways and become "organized" to make my writing more profitable (time is money, you know!). But with the help of my Osborne and a truly superb program called SUPERFILE (from FYI,

I despaired having to become "organized" to make my writing more profitable.

Inc., PO Box 10998 #615, Austin, TX, 78766; 512-346-0133), my sanity has been saved.

A friend introduced me to Superfile because he was researching database management software for business applications, and was especially impressed with its documentation. Knowing I am a stickler on the subject, he showed me the notebook-style manual, which in itself is a work of art. Each section is well-labeled, important points are clearly and boldly highlighted. And best of all, the actual operating procedures are demonstrated over a two-page spread, broken up into three columns. One column describes what the "computer says" onscreen, one instructs what you enter in response, and "comments" explains why and where this is use-

ful, referring to other relevant data and where to find it in the manual. I walked right through the demo and found myself in love.

The real beauty of this program, however, is on disk rather than on paper. It is described as a "free format" information retrieval system that solves your filing problems, and it does. Each piece of information—an address, idea, reference to a magazine article, interview quote—can be cross-referenced up to 250 different ways, using words or phrases you choose and place in your custom keyboard dictionary.

Imagine this scenario: you want to collect all the information you've gathered for that article assignment on "Building The Better Mousetrap" in *Inventor's Weekly*. You've already input the quotes from the world's best mousetrap builder, references to articles on the feeding habits of grey mice vs. brown mice, statistics on how many inventions turn a profit for their inventors, and the statement about inhumane mousetraps by the president of the ASPCA which appeared in the *New York Times* last year. They

TRA VIDEO SYSTEM CAN ADD CHARACTER TO YOUR OSBORNE 1

(Without your Osborne 1 ever leaving your desk.)

Monitor not included with TRA system.

SPECIAL PRICE OF \$330.

(plus \$6.00 shipping and handling)
30-Day Money-Back Guarantee

80 and 100 COLUMN VIDEO

The Research Associates introduces a video system as an add-on to the Osborne 1. The system provides the versatility of an 80 or 100 column video screen format on an external monitor without loss of Osborne 1's video capabilities or speed.

TRA video system enhances your Osborne 1's video capabilities by providing:

- 80 or 100 character by 24 line window into a 128 character by 32 line video format
- Reverse video and blinking of the display
- Easy connection to your external monitor by any Osborne user
- Composite and TTL video monitor outputs
- Soft scrolling
- Normal printer operation
- Driver software supplied by TRA for easy set up.

You're looking at the only word processor that's as easy to use as **SuperWriter.**TM

If you're like most people, you don't want to make a career out of word processing. When you have to write a simple letter or memo, all you want to do is roll up your sleeves and get down to business.

And if you're buying a personal computer, now there's a new software package that makes things just that simple.

SuperWriter.TM

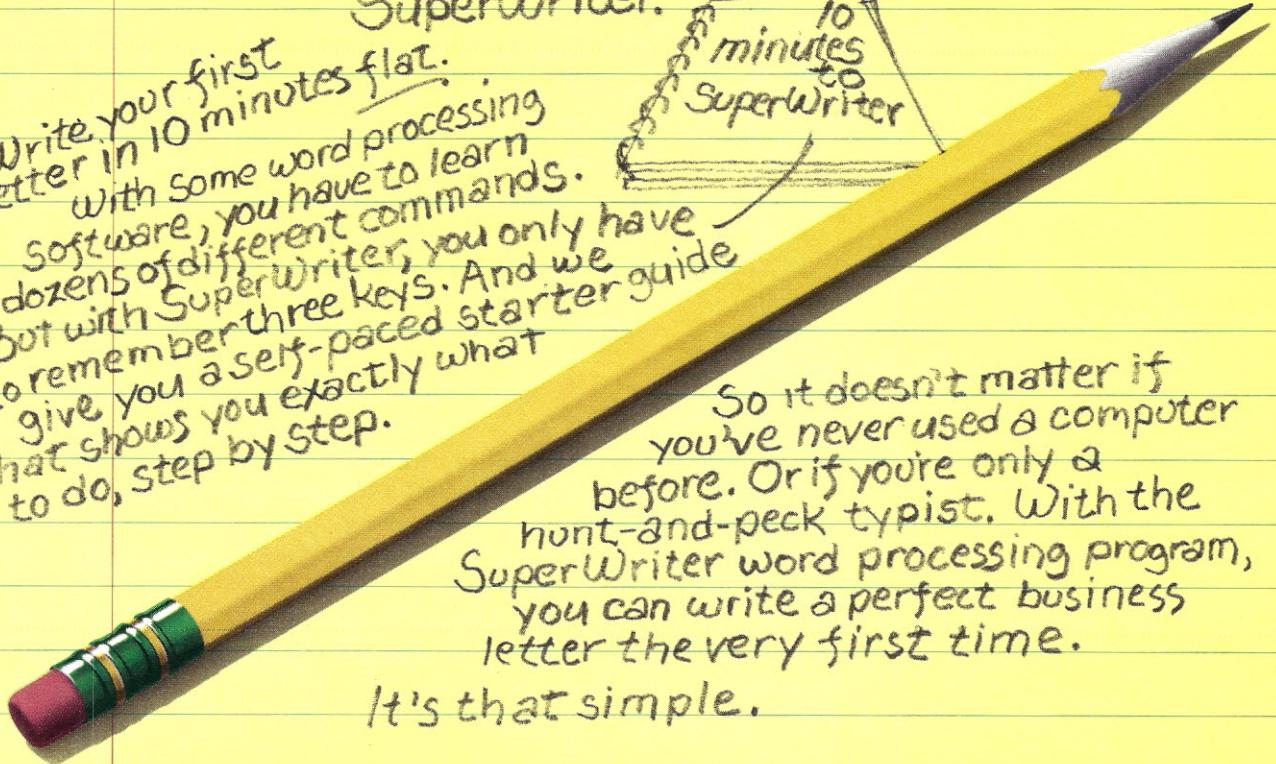

Write your first letter in 10 minutes flat.

With some word processing software, you have to learn dozens of different commands. But with SuperWriter, you only have to remember three keys. And we give you a self-paced starter guide that shows you exactly what to do, step by step.

So it doesn't matter if you've never used a computer before. Or if you're only a

hunt-and-peck typist. With the SuperWriter word processing program, you can write a perfect business letter the very first time.

It's that simple.

Everything you
need for only

\$295⁰⁰

- even a spelling checker.

We're talking about a really complete package here. You get a full-function word processor, our 20,000-word SuperSpellGuard™ spelling checker, and a form letter generator. All for \$295.00 suggested retail. To get all these functions any other way, you might have to spend \$900.00 or more.

You never knew your letters could look so good.

We've built all kinds of professional features into SuperWriter. Like proportional spacing. Boldface highlighting. Memo formatting. And more. So even if you're a complete beginner, you'll wind up with completely professional results.

Help is closer
than you think.

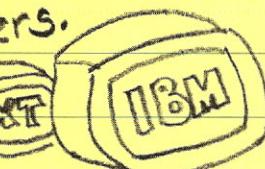

SORCIM®

If you get stuck on a problem with any other word processing software, you'll probably have to go back to the store for help.

But if you have any questions at all about SuperWriter, all you do is pick up the phone. We've got a full-time crew of customer service experts on call, ready to help you out.

works on lots of
personal computers.

About the only
thing it can't do is doodle.

Right now, SuperWriter is available for the IBM PC and the new IBM PC XT. Of course, it takes full advantage of their features—full color, hard disk and more.

By June 15, we'll have SuperWriter ready for CP/M, CP/M-86 and MS/DOS operating systems, which means you can use it on most of the popular personal computers.

So stop by your nearest computer or software store soon and ask about SuperWriter. In just 10 minutes, you can learn everything you ever need to know about word processing. And see why every other system is too complicated for words.

Dealer inquiries invited

reside in a WordStar file called "misc. data" among your other pieces of miscellaneous data.

You've properly followed the Superfile input parameters, coding a "*C" at the head of each separate data piece, and "*K" at the end of the text itself (typed in normal paragraph mode, with no limit on length). "*K" indicates end of text and beginning of keywords, which are the words you select to help retrieve these sections. My keywords in this case might be "mouse," "mice," "mousetrap," "inventions," "inventors," "animals," "cheese," and "statistics." Next I would type all the keywords that apply to my piece of data, separating them with a "/". When all the words I might ever use to search for this data are included, I end the section in Superfile style with a "*E." This may sound complex in description, but it was truly simple to learn, even for an absent-minded writer like me.

So now I'm ready to compose, and need these pieces printed out to decide whether they go into my final copy, and where. I have also created a keyword dictionary for "mousetrap article" with WordStar, so I run Superfile and call up that dictionary for my super search.

Since Superfile is a menu-based program, it reminds me which steps to follow, but is not patronizing or slow. I access my database file "misc. data" and display its dictionary to remember which keywords apply to my mouse story. After noting them on my handy yellow pad, I instruct Superfile to output the data to my printer and begin to search the database file.

I enter my search clauses by keywords "mouse," "mice," "mousetrap," "inventions," "inventors," "animals," "cheese," and "statistics." You can input "and/or/not" parameters, such as "mice" OR "mouse" NOT "rat" to include potential material and refuse irrelevant data simultaneously.

The number of entries which contain these keywords is displayed onscreen, and Superfile retrieves the entries selected. It then outputs the data to my printer so I can use it in my article. Since I will compose the text in a normal WordStar file, I can either retype short passages while composing, or PIP the mis-

cellaneous data document to my working disk and (via WordStar) write the selected mousy messages into their own files for recall into my document, or just note where they go and pull them in later.

In this case, Superfile would have saved me an hour of searching through bits of paper and back issues. It also has some handy utilities I haven't yet tried. You can sort and merge files numerically or alphabetically (useful for alphabetic sort of bibliographies, numerical sort by zip code for mailing lists). You can split files without altering the original data file (which I could do with my mouse materials above). You can also change characters (a global search and replace), recognizing and converting up to 255 different characters within a file in a single pass, but leave the original file intact (useful for changing upper case to lower case, numbers to letters, name A to name B).

Other ideas for Superfile include using it as a "tickler" file, with the date or week or month you want to be reminded of as a keyword; cross-indexing correspondence (both incoming and outgoing); compiling

It reminds me which steps to follow, but is not patronizing or slow

and sorting library and reference citation notes, product descriptions, or personnel information; customizing or creating contracts; and even keeping tabs on contacts and follow-up data.

FYI Software also has a mailing list program (which can work with Superfile or on its own), and I will review it in a future issue. If it's as easy and useful as Superfile, I predict it will revolutionize my submission mailing list in a day.

Speaking of submissions, another program has already helped me keep track of where my articles go and where my money comes from (not to mention who sends those rejection letters). WRITE TRACK by Marilyn Gratton (Gradan Consulting, POB 3594, Thousand Oaks CA 91359; 805-497-4250) is another database management program, but specifically compiles data on when your article went out, where

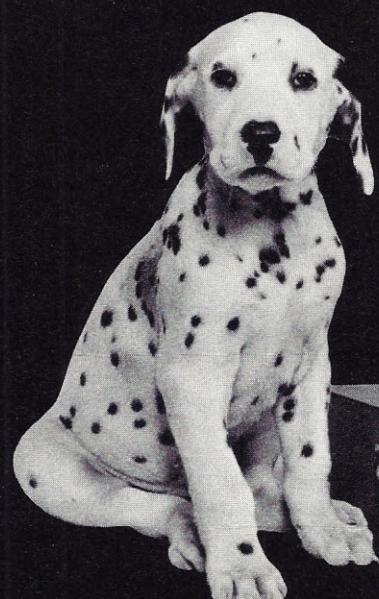

and who to, and follow up: whether it was purchased, how much you were paid, whether photos accompanied, and even how much postage or printing cost was spent.

Also menu driven and simple to use, Write Track can print reports in alphabetical order, with market specifics and editors' names noted too (useful at tax time to recall data by sales and display what each article earned). Personal notes can be kept with submission data, such as whether a particular editor dislikes dot matrix print-outs.

With my databases managed now, I have no excuse for wasting time while searching for ideas, notes, and other relevant information. I've happily replaced scrambling through boxes with playing Munchkin onscreen to avoid sitting down to work when writer's block strikes. In my expert opinion, this is computerized progress. ■

INTRODUCING... *PUPS*[®]

THE WORLD'S FIRST TRULY Portable Uninterruptible Power Supply

The BITS PUPS[®] (Portable Uninterruptible Power Supply) is what the world has been waiting for since "computer" became a household word.

No more worries about power losses, spikes, or surges from unreliable AC power. Continuous pure DC power to your computer that reduces heat and prolongs circuit life.

PUPS[®] is compact and completely portable. For the first time your portable computer is truly portable. PUPS[®] allows you to run on AC, self contained batteries providing 3 to 4 hours, or 12 volt automobile power.

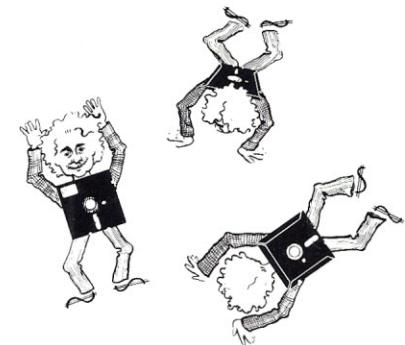

PUPS[®] the first complete power system that is compatible with almost any personal computer or intelligent terminal.

Beginner's Luck

The easy way

John Gaudio

We normally work with two types of diskettes, system or program diskettes like WordStar, SuperCalc, or MBASIC, and data diskettes that hold the letters, spreadsheets and lists we create. System disks normally go into the A drive, and data disks go into B.

We organize data disks by subject. Typical subjects might be Accounts Receivable, Accounts Payable, or Correspondence. Each may contain letters written with WordStar, SuperCalc spreadsheets, and lists from dBase II or Personal PEARL. The common bond is the subject.

Before you put data on a diskette, that diskette must be formatted. You'll find though that doing a little more than just formatting your data disks will make life easier. We'll create a Master Blank Data Diskette, and then create working data disks by making copies of the master. Once the Master Blank Data Diskette is created, it takes no more time to make copies than it would to simply format new disks.

The master diskette is created by formatting a new disk, putting CP/M on its system tracks, and

adding a couple of handy programs.

Put your CP/M System diskette in Drive A, and a new diskette in Drive B. Make sure that the disk in B is NOT write protected! Close the drive doors. Press the **RESET** button, and press **RETURN**. You have just "booted" the system. The CP/M Help menu should appear, and you'll press the escape [ESC] key. This takes you to CP/M's A> (read A prompt).

Now CP/M is waiting for your command. You type: **COPY<CR>** where <CR> means press the RETURN key. The program **COPY.COM** is read from the disk into the computer's memory, and in seconds it's displaying the following message:

*C Copy diskettes
F Format diskettes
Return Exit program*

Press C to Copy, F to Format, or Return to Exit

Press F for formatting, and the COPY program now asks you to:

Select diskette to Format (A or B) or press RETURN for main menu

Here we select **B**, and are told to:

Place diskette to be formatted in drive B and press RETURN when ready

Our new diskette is already in Drive B, so we press **RETURN**. If you have a single density Osborne 1 the formatting begins immediately. If you have double density, one more question has to be answered.

*S Single Density
D Double Density*

Press S for Single Density, D for Double Density

Double density users will choose D to create a double density Master Blank Data Diskette.

Formatting a diskette is like putting lines on a piece of paper. The "lines" on a diskette are called tracks and there are 40 of them. These are concentric circles, like a target, and are numbered from 0 on the outside to 39 on the inside.

Your screen now shows a column for each of the tracks from 0 to 39, and places a * under each track as it's properly formatted. When it's done the message "FORMAT completed successfully" appears.

Formatting a diskette is usually just that easy, but sometimes an E will come up in place of one of the *'s. When this happens you've run into an error. If this happens, make sure your diskette is NOT write protected. If that's not the problem try another diskette, or try formatting in the A drive. If it still doesn't work check with your local users group or dealer.

You can now format several more diskettes, but we're doing things a better way. We'll want to "Press **RETURN** for main menu" and press **RETURN** once again to exit. The **A>** now returns.

Having formatted a disk we must now put some very special information onto what are called the system tracks. These are tracks 0, 1, and 2 on the outside of the diskette, and they contain the CP/M Operating System—the smarts of the machine. Without an operating system the Osborne 1 would be pretty dumb. In fact it couldn't do much more than display the start up message.

Insert a diskette in Drive **A** and press **RETURN**. The smarts

(CP/M) are then loaded into the computer from the system tracks of the diskette in Drive A. This is exactly what happens each time you start or "boot" the system. There are other times when the system tracks are read, and putting CP/M on those system tracks is like putting oil in your car. Do it and everything works fine. Forget it, and it'll backfire on you.

CP/M is put onto your system tracks with a program called **SYS-GEN**. **SYSGEN** is found on your CP/M System Disk, and stands for **SYStem GENeration**. It's used to

copy CP/M from the system tracks of one diskette to those of another.

With your newly formatted diskette in B, your CP/M System Diskette in A, and the **A>** on the screen, type: **SYSGEN(CR)**

SOURCE drive (**A** or **B**) —

will appear on the screen, and you respond by pressing **A**. This tells the program that we are taking CP/M from the system tracks of the diskette in Drive A. Drive A is the **SOURCE**. The message:

Put SOURCE diskette in drive A, then press Return

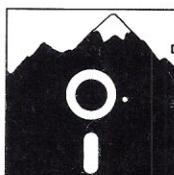

CTA Gamestyx for the Osborne 1

Now you can have the original joysticks for your OSBORNE 1! These versatile CTA GAMESTYX have 8 positions with a "fire" button and connect to the IEEE488 port of any OSBORNE 1. Furnished complete with full disk documentation and basic example of how to use the CTA GAMESTYX and software drivers.

To order, or for more information
contact:

**Rocky
Mountain Data**

1120 Juan Tabo, N.E.
Albuquerque, New Mexico 87112
(505) 294-8856

appears. Since the source diskette is already in Drive A, we simply press **RETURN** and wait for the following message:

System read successfully.

CP/M has been copied from the system tracks of the CP/M System Diskette in Drive A and stored away in the Osborne's memory. We are now asked to specify the

DESTINATION (A, B, or Return to exit) –

We select **B** for our Destination, and the message

Put DESTINATION diskette in B, then press Return

appears. With our destination diskette already in the B drive we simply press **RETURN**. At this point the CP/M operating system is copied from memory to the system tracks of what is rapidly becoming our Master Blank Data Diskette.

The message

System copied successfully.

then appears along with the request for a

DESTINATION (A, B, or Return to exit) –

Press **RETURN** to exit, and you'll be greeted by our old friend the **A>**.

Most of the battle is now won. You have formatted and "sysgened" a diskette, and you can now use it for data. But there are still a couple

of programs that you'll want to add. These are XDIR.COM and PIP.COM, and both are found on your CP/M System Diskette.

To move XDIR.COM over to the B drive respond to the **A>** with:

PIP B:=A:XDIR.COM[V](CR)

- **PIP** is the name of the program we're using
- **B:** is the destination
- **A:XDIR.COM** is the file we want to copy
- **[V]** tells PIP to Verify that the information is copied correctly.
- **(CR)** of course means press **RETURN**.

Pressing **RETURN** lights the **A** drive and the program PIP is loaded into memory and run. The PIP program then checks the **B** drive (you saw the light go on over there didn't you?) and then reads XDIR.COM from the **A** drive into memory. Once the **A** light goes out, **B** lights up again and XDIR.COM is moved from the memory over to the disk in **B**. Don't forget the **[V]**! It'll help keep you out of trouble.

Now we'll use PIP once again to move a copy of PIP.COM over to the diskette in Drive **B**. Do this by using the same command that moved XDIR.COM over to **B**, and changing the XDIR.COM to PIP.COM. The new command is:

PIP B:=A:PIP.COM[V](CR)

Again the drives whir, the lights glow, and in a moment the **A>** is

once again upon us. Now try the command:

XDIR B:(CR)

to see what's on the **B** drive. You'll find PIP.COM, and XDIR.COM on your Master Blank Data Diskette.

All that's left to do now is label and write protect the Master Blank Data Diskette. To use the Master Blank Data Diskette, just make copies of it using the COPY program, and label them according to the subject.

Having PIP and XDIR on each data diskette can be invaluable. Having CP/M on the system tracks is a great help too, and making copies of the master takes no longer than formatting new disks from scratch. You now know how to do it the easy way!

John Gaudio runs Independent Training Plus, a Denver based operation that specializes in training users of the Osborne 1 and solving their problems. He is a regular contributor to the Portable Companion, and to the newsletters of the Denver Osborne Group and the First Osborne Group.

CB-80™
for only
\$39.95

New SuperGraphics PLUS does it all!

YOU paint a picture and SuperGraphics PLUS will:
(1) print it on your Epson or
(2) create a separate program that will reproduce your screen design in dBASEII, MBASIC, CBASIC, or CB-80.

It's like playing music and having the sheet music produced for you! Programs written by SuperGraphics PLUS can be included in your own programs for that professional look. String several together

and produce slide shows or MOVING GRAPHICS on your Osborne®!

The highly praised 63 page Reference Manual explains it so well that kids as well as consulting engineers are using SuperGraphics PLUS. Draw easily with graphics, text, half-intensity, and underlining. Powerful Block Commands like COPY, MOVE, and FILL (with any character) speed your work. You'll love it!

Charge it now over the phone to your Mastercard or Visa. Call (813) 681-0194 24 hours a day/7 days a week, or Mail your check for \$39.95 with your name and address to Ruff Software, Box 98, Plant City Florida 33566.

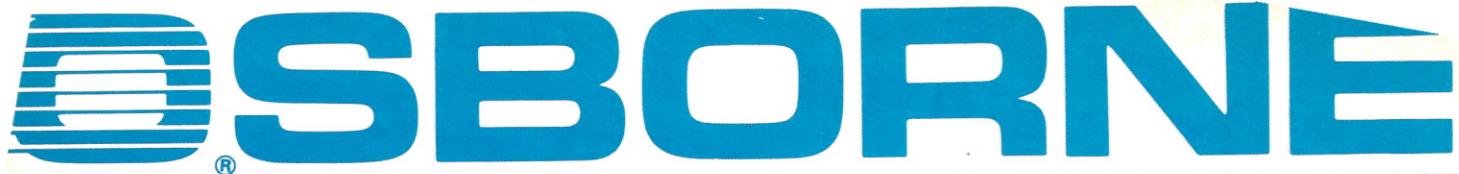

All orders shipped first class within 24 hours.

Also available at participating

ComputerLand®
stores.

Software now available for the Osborne 1

Forth™

Forth is a high-level computer language in which the Osborne user can use the vocabulary provided, or extend it with his own words for your specific applications. Writing and editing with Forth is easy using the completely interactive screen editor. This language is ideal for controlling peripheral devices such as printers, cameras, timers and laboratory devices. Forth has been used to write data base programs and other programs for general business. (*The Software Works Inc.™*)

Personal PEARL™

The easy way to create custom application programs through English language interaction with your Osborne computer. Personal PEARL asks you for examples of the results you require and then produces an applications program to provide them. For the individual who requires custom computer solutions without the cost and time delay of hiring a programmer. A flexible report generation facility is built into Personal PEARL. (*Relational Systems International®*)

Personal Datebook™

This popular program handles a calendar and appointment schedules for two people or offices (using Osborne 1 single density), keeping an accurate and complete schedule for the busy executive or professional. Personal Datebook saves frustration when trying to find a convenient time for a staff conference—it automatically finds a time when all staff members are available. A valuable tool for time management, Personal Datebook keeps a permanent record of each day's activities and provides print-out functions for future reference. (*Organic Software®, Digital Marketing™*)

DataStar™

DataStar is an easy-to-learn, versatile and comprehensive data entry program, retrieval and update system for your Osborne. DataStar handles recordkeeping applications from initial form design through updating, addition/deletion, and search/retrieval of records. DataStar is designed to support speed and accuracy, allowing fast typists to operate at their best rate. The programs comprehensive HELP messages and instructions also provide the assistance the inexperienced user needs. (*MicroPro™*)

Disk Doctor™

This program reclaims damaged diskettes and allows you to recreate accidentally erased files. Disk Doctor helps the Osborne user to restore damaged or faulty diskettes to a usable condition, recovering as much data as it can. As an added benefit, Disk Doctor can also be used to certify new diskettes and eliminate any bad sectors before they can cause problems. (*SuperSoft™*)

Footnote™

Footnote numbers and formats footnote calls and the actual words in WordStar text files. Footnote numbers notes consecutively, and formats the file, placing the notes at the bottom of the appropriate page, or, at the user's option, moving them out of the text to a separate footnote file. (*Pro/Tem Software, Inc.™*)

Milestone™

Milestone is used for planning priority scheduling and tracking of small projects on your Osborne computer. Milestone creates Gant project charts and can be configured to find the critical path of a project. Two kinds of users will find Milestone helpful: project planners who are not yet using computers as planning tools, and planners who are disenchanted with their powerful project planning systems on minis or large frames. (*Organic Software®*)

Enumerator™

Enumerator adds variable line numbering abilities to documents created by WordStar. Enumerator allows you to number by line in any sequential pattern (ideal for attorneys, text writers and BASIC program writers).

(*The Orthocode Corporation™*)

dBASE II™

dBASE II is a powerful, easy-to-use data management tool for constructing and manipulating numeric and character information files. A special feature of dBASE II is its own English-style program-building-language. You may SORT, EDIT, or DISPLAY a database directly from the keyboard, or write menus and programs to support your specific applications. (*Ashton-Tate, Inc.™*)

System Checker™

A very simple verification program which allows the Osborne owner to have confidence in operation of his computer. A comprehensive series of tests analyze memory, disk drives, visual display, CPU and printer. Each test shows an easy to understand pass/fail response. A manual helps the user to understand what each option tests, and what the responses mean in easy-to-understand terms with no computer jargon. (*Supersoft™*)

SuperSort™

Allows the Osborne user to perform sorting, merging, and record-selection functions on data files. SuperSort is compatible with BASIC, Fortran, Cobol and assembler applications programs, and can also be used with mail lists maintained with Mailman™ and WordStar. Sorts up to 32 files into a single output file, automatically using external merge as necessary, depending upon the amount of data and memory available. (*MicroPro™*)

Grammatik™

Grammatik provides the Osborne user with a unique program that analyzes written styles at both the word and the sentence level. This document-checking system checks for two sources of potential problems; style and typographical errors. Style analysis includes checks for specific phrases commonly recognized as being poor or wordy usage, as well as compiling statistics about word and sentence length. Typographical checking detects a number of errors such as: double words, capitalization at the beginning of sentences, and inconsistent and punctuation marks. (*Aspen Software Company™*)

Money Maestro™

Money Maestro is designed to provide financial recordkeeping, tax reporting and budgeting for professionals, clubs, families and very small businesses. Those who recognize the benefits of accurate records, but don't require full-blown double-entry accounting systems, will find Money Maestro to be the fast, simple and complete money management package they seek. (*Innosys, Inc.™*)

Microsoft® Basic Compiler

Allows Osborne users to compile their MBasic interpretive programs into true Z80 machine code. The Basic Compiler provides you with three major benefits: 1) increased speed of execution for most programs; 2) decreased program size for extremely large programs, and 3) source code security. When you distribute a compiled program, you distribute optimized machine code, not source code. Consequently, you distribute your program in very compact form and protect your source program from unauthorized alteration. The package also included a relocatable Z80/8080 assembler for use under CP/M. (*Microsoft™*)

Mailman™

Mailman creates and manages your mailing list. Formatted screen entry with eight different selecting criteria gives the Osborne user ease of access and entry, along with discrete listing capabilities. In addition, the program automatically sorts data by zip code and name. Mailman is designed to work with WordStar and MailMerge®. (*Standard Microsystems™*)

BSTAM™

BSTAM is a telecommunications program that allows the Osborne user to send and receive any CP/M file with complete error checking. The BSTAM documentation gives the user a comprehensive overview of types of channels, modes of transmission, sending and receiving any CP/M file. A copy of BSTAM is required on both systems involved in the communication. (*Byrom Software™*)

Real Estate Investor Calc-aid™

A SuperCalc™ overlay designed for both the real estate professional and the potential home-buyer or seller. Using SuperCalc's "What-if" capabilities, comparative analysis of the complex factors involved with real estate investment can be performed swiftly. Models are supplied for individual residence or income property analysis. (*SimpleSoft™*)

Documate/Plus™

This is an indexing program that works with WordStar to create an automatic text index or table of contents. Documate/Plus supports up to 8 levels of sub-indexing, and you can choose to index either words or phrases. (*The Orthocode Corporation™*)

Spellguard™

Spellguard is a computer program that helps the user to eliminate spelling and typographical errors in written materials prepared with WordStar. Two dictionaries are supplied with Spellguard: the first consists of 20,000 of the most frequently used words in the English language and the second contains 10,000 words and can be easily expanded to include technical vocabulary and/or foreign languages. (*Sorcim™*)

muMATH-80™

muMATH-80 is a fully interactive Symbolic Math System that efficiently and accurately performs true algebraic and analytic operations. muMATH can evaluate and simplify expressions containing variables that have not been assigned numeric values. The muSIMP-80™ programming language is provided with this package to extend muMATH or to implement other Artificial Intelligence applications. However, most Osborne users will find muMATH sufficiently powerful to handle the majority of their mathematical problems. (*The Soft Warehouse™*)

Math*™

This program interacts with WordStar to add basic math capability to your Osborne computer. Math* performs addition, subtraction, multiplication and division. Within your WordStar document, Math* allows you to perform math functions in either rows or columns. (*Force Two®*)

These software packages are now available at your local authorized Osborne dealer.

COMPATIBLE HARD DISKS
AND SOFTWARE

MD - 10

10 MEGABYTE (FORMATTED)
5 1/4" HARD DISK Including

POWER! \$1995

POWER!

Check out InfoWorld's Rave
review of Power (Nov. 8/82)

55 CP/M® UTILITIES IN ONE PACKAGE

...The super program that puts YOU in control of
CP/M® and your winchester.

POWER automatically numbers disk files. Just pick
file number to copy, Erase, Reclaim, Rename, Type,
etc.

...Your computer feeds the file names automatically
you do No typing! No typing error ever!
YOU DON'T NEED SYSTEM DISK IN ANY DRIVE!
No more BDOS ERROR!

YOU Test and Fix bad disks! Reclaim accidentally
erased files or programs! Single step thru memory up
or down! Search, View, Change memory or disk in a
snap! See Status and File Size instantly! Verify Check-
sums for programs! Load or Save programs at any
address.

55 prompted user-friendly functions for housekeeping
and a 120 page easy-read users' guide make
POWER your most often used software. You'll use it
everyday!

Now, POWER! also includes a special program
that lets you lock sensitive files, so that only you can
access them. Without the secret PASS-WORD which
you can create and change at will, no prying eyes
will ever know your secret file even exists.

SOME MAJOR POWER COMMANDS:

REN	CM	WRITEGR	DISK	STAT
TYPEA	USR 2	DUMPA	SPEED	SETDIR
SIZE	ERA	SEARCH	WRITE	RECLAIM
XUSER	TYPEX	?	DUMPX	DS
SETRO	CHECK	COPY	FILL	READ
GROUP	TEST	TYPEH	EX	DUMP
SAVE	SETWR	EXIT	DIR	MOVE
READGR	LOG	USER	TYPE	JP
DUMPH	LOAD	SETSYS	RUN	

POWER is the utility everyone must have and for \$169
the cost is a low \$3.07 per utility.

For this unbelievable price your winchester will be delivered completely
assembled and tested, with drive controller, case, power supply, cabling,
Z-80 interface and the best disk controller software on the market.

- The MD-10 allows you to retain your OSBORNE's portability. You simply unplug the winchester and the OSBORNE 1 works exactly as before.
- The unique and simple interfacing system does not tie up existing OSBORNE 1 ports.
- Significantly faster than other winchester subsystems which interface through the IEEE-488 port.
- CP/M drivers require minimum memory overhead (less than 2 K). Other systems require as much as 6K.
- The MD-10 can read or write a 64k file in less than four (4) seconds.
- A network system is available which can support up to sixteen (16) OSBORNEs or other mixed computers from one MD-10 or larger disk subsystem.
- Both software and hardware installation is quick and simple.
- With POWER! Software, files can be code word protected.
- MD subsystems can be later upgraded to double density.
- Up to eight (8) winchester subsystems can be interfaced to one OSBORNE.
- Software supports 32 different user areas per MD-10
- Backing up hard disk files is simple with the special software which is provided with all MD-10 subsystems.
- With a single hard disk installation, the MD-10 subsystem becomes units A and B with the standard drives being designated E and F if a second MD-10 is installed later it becomes units C and D.
- MD-10 or larger systems will interface with IBM PC or any Z-80 computer (CCS, APPLE (CP/M), ZENITH/HEALTH, NORTHSTAR, GODBOURG, XEROX 820, Z-80/S100, ALSPA, or TRS-80 MOD II) using CP/M, OASIS or other system.

CalcAids

Calculate to insulate

Pursuing cold weather savings

Brad Baldwin

This CalcAid provides the home owner a ballpark estimate on energy payoffs through improved insulation, how much and what type of insulation to install (insulation cost effectiveness), and a simple lesson in energy calculations. To top it off, SuperCalc's LOOKUP and EXECUTE commands are profiled for the first time in the *Portable Companion*.

The inspiration for this CalcAid came from the excellent energy-related articles and non-computerized worksheets published by *Consumer Reports* magazine. With the variables and connected calculations a worksheet of this nature contains, SuperCalc seemed a natural choice for adapting the concepts of insulation and energy management.

Cost effectiveness

It is helpful to know when the cost of the insulation is recovered, known as the "payback" period. If insulation costs \$1000 and saves \$100 a year, the payback period is roughly 10 years. ("Roughly" because the projected rate increases for energy were not taken into consideration.)

Payback and cost effectiveness

are important concepts; there is an outer limit where insulation is no longer cost effective. After all, it could be reasoned that if 12 inches of fiberglass insulation is good, then why wouldn't 16 inches be better? From a cost standpoint, it's not. However, upgrading from 4 inches of insulation to 8 inches may be quite cost effective. Figure 1 shows that each inch of insulation is less effective in reducing heat loss and fuel bills than the one that went before. Eventually, insulation is no longer cost effective due to the laws of diminishing returns. You can see this for yourself by altering the values in the worksheet.

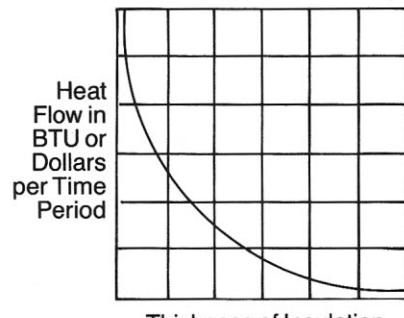

Figure 1

DEALER INQUIRIES WELCOME

A REAL TIME CLOCK ...for your Osborne 1

This is a true battery operated real time clock/calendar that plugs inside your IEEE 488 port without requiring disassembly or altering your Osborne warranty. Included diskette software allows you to access the time or date through MBASIC, WORDSTAR, MAIL-MERGE, CP/M, and SUPERCALC. Other utilities are also included.

Order the RT-60 if you only use your IEEE 488 port occasionally. If you regularly use the port as an IEEE 488, Centronics parallel, or general purpose port, order the RT-60A. The RT-60A has an output connector and extra circuitry that allows the port to be used for these functions without having to unplug the clock.

RT-60 \$69.95
RT-60A \$89.95

Add \$5.00 shipping and handling.
Arizona residents add 4% sales tax.
Check, money order, or COD.

Look what up?

What is LOOKUP and EXECUTE? As technical editor, I receive a few questions per week on EXECUTE and virtually nothing on LOOKUP. I suspect that most people may not realize LOOKUP exists. (As of this writing—April '83—these commands are undocumented in the Osborne 1 manual. EXECUTE is only available to new computer purchasers; SuperCalc

upgrade dates or costs have not been set.)

LOOKUP looks for a value within a table that comes closest to the one specified. For example, I use it here to bring back climate and fuel factors. It looks at a cell value, then looks at a "lookup table" and picks out the value immediately to the right of the number that comes closest to the cell value. If it detects a number greater than the one called for, it will select the next

lower reading in the table. (Confused? See the examples in the worksheet. It's easier to understand when seen in action.)

EXECUTE is a new feature of SuperCalc, and quite powerful. Think of it as similar to CP/M's SUBMIT function or Osborne's SETUP function key program. EXECUTE "executes" an entire series of SuperCalc commands written with a text editor (WordStar non-document file). With one file

Optional DO/IT.XQT File

Figure 2

execution, several components of a spreadsheet can be laid out. Figure 3 was executed from one file with the appropriate column widths, \$ value cells, horizontal lines, vertical line, and a few titles drawn in. Perhaps it's not the most powerful application of EXECUTE, but it sure is fun to watch it take off and do its stuff. Figure 2 explains in detail the DO/IT.XQT non-document WordStar file from which the commands were drawn.

Working on the worksheet

The worksheet itself is simple enough. In cell B3 enter the unit cost of fuel. (I ignored stepped billing rates contingent upon "lifeline" energy usage.) Enter a number from 1 to 5 depending upon the fuel type shown in the worksheet's chart. The LOOKUP function calculates the fuel factor.

Shaded areas indicate \$ formatted cells.

Appearance of Worksheet After Execution of DO/IT.XQT.

Figure 3

Use Figure 4 to extract your climate zone number. LOOKUP calculates the climate factor; both fuel and climate factors are inventions of *Consumer Reports* to simplify the calculation process. The fuel factor takes into account the different amounts of heat produced by different fuels. The climate factor takes into account average differences between indoor and outdoor temperatures in various parts of the country over the course of the heating season.

Row 15 handles the R factors. An R rating refers to how much a given material (fiberglass, wood, glass, etc.) resists the flow of heat through it. Figure 5 is a table of R ratings derived and averaged from four different sources, so treat them as best-guess approximations.

"Present" and "improved" refer to the before-and-after-insulation process. If the R-value of a wall is 3 and R-19 insulation is added, the improved insulation cell should read 22.

Window insulation is treated separately from structure insulation because insulation costs and

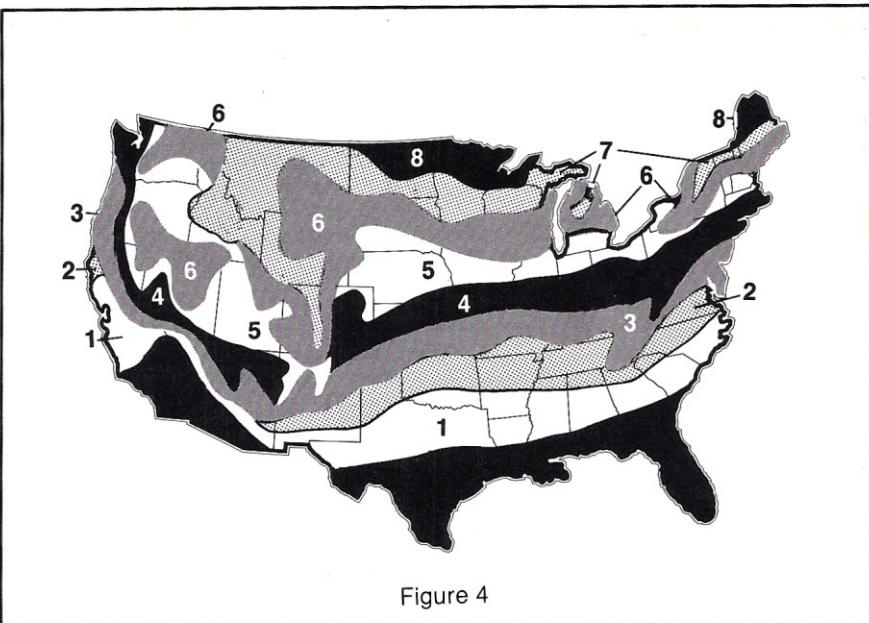

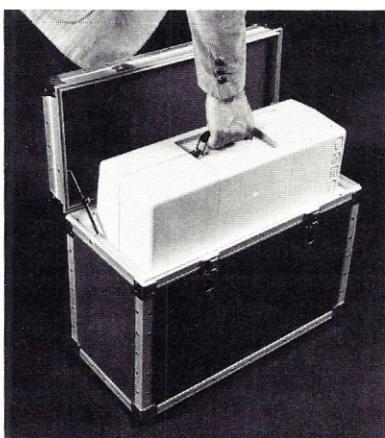

Figure 4

R-factors are obviously different for the two.

Note: The total cost of the job is something you will have to obtain on your own. It depends upon the product used, the R-value (thickness), the area to insulate, and applicable labor costs. A straight line determination may not be

possible; I did not connect any formulas at the total costs cell with the rest of the spreadsheet. For example, I did not assume that insulation prices increase in direct proportion to R-rating (one can pay a premium price for the thicker insulation). Also, does a labor contractor charge less to insulate large areas than

go first class!

...with Wilson's new SST case

Even a tough customer like the Osborne 1 can use extra protection against the rigors of travel and constant handling. If your Osborne 1 works and travels hard, you'll need more protection than a cloth or leather bag can give.

Light enough to carry - Strong enough to ship

Wilson's new SST case offers unmatched security for your Osborne 1, whether it's at your side, in the trunk of your car, or in the cargo hold of a jetliner.

We've combined Wilson's tradition of fine craftsmanship with the best of today's advanced materials. The result is a tough, lightweight case that provides the most absolute protection available.

Your computer nests inside a special shock resistant liner, surrounded by panels of top-grade mahogany bonded to flame and chemical resistant Kydex®. This durable package is framed with rugged aluminum extrusions, capped with plated steel corners, then fully riveted to insure maximum strength.

Dealer inquiries invited

For a limited time a Wilson SST case, designed especially for your Osborne 1, is available at this introductory price:

Specify: Black, Green, Blue or Beige.

A Heat Flow Formula

This formula gives you a better idea how much money sails through your walls or windows during a given hour and given outside-inside temperature difference. Furnace efficiency figures are supplied as well as standard fuel values.

$$\frac{(\text{Area}) \times (\text{temp1} - \text{temp2}) \times (\text{cost of fuel per unit})}{(\text{R-total}) \times (\text{Efficiency}) \times (\text{Fuel value})}$$

Area = area to be measured, in sq ft. Use 1 for the heat loss per square foot
 temp1 - temp2 = measure the inside and outside temperatures, and take the difference. Keep the value positive (75 - 65, not 65 - 75).

Efficiency = Convert percentage into .6, .65, 1, etc.

Example equation:

How much money sails through a single 4 x 5 window (no air leaks) during one hour's time? Inside temp 70, outside temp is 50. Window is R-rated at 1. Fuel costs \$.4 per therm.

$$\frac{(4 \times 5) \times (70 - 50) \times (.4)}{(1) \times (.65) \times (100000)} = \$.0024$$

Fuel	Fuel Value	Assumed efficiency
oil	140,000 BTU/gal	60%
natural gas	1000 BTU/cu ft	65%
	100,000 BTU/therm	
propane	90,000 BTU/gallon	65%
butane	130,000 BTU/gallon	65%
electricity	3400 BTU/kwh	100%
electricity (heat pump)	3400 BTU/kwh	200%

small areas? Does the price of the insulation come down for the same reason? If you can determine any of these items, feel free to include appropriate formulas in the worksheet. Any item can be manipulated to suit an individual need.

Hint, hint

I would think that a multi-task energy worksheet would have considerable vertical market value. Insulation contractors, utility companies, "do-it-yourself" hardware stores, solar engineers, and solar energy suppliers could use an energy CalcAid to demonstrate to the customer savings, costs, payback periods, heat losses, and a host of other economic and technical aspects of their product.

Typical R-Values

Insulation

Fiberglass batts or blankets	R-3.2/inch
Loose-fill	
Cellulose	R-3.5/inch
Fiberglass	R-2.5/inch
Mineral wool	R-3.5/inch
Expanded polystyrene	R-3.4/inch
Vermiculite	R-2.1/inch

Building Components

Walls	
Uninsulated wood frame, with:	
Stucco	R-3
Wood siding	R-3
Wood shingles	R-5
Brick	R-4
Concrete block	R-4
Ceilings (under attics)	
Gypsum (½")	R-2
Acoustical tile	R-3
Floors (over crawl/basement)	
Carpet and pad (rubber)	R-2
Wood subfloor	R-1
Hardwood floor	R-7
General average	R-3
Windows (vertical)	
Single glazed	R-.9
Double glazed	R-2
Plastic film	R-1
Drapery liner	R-1
Thermal shutters	R-2.5
to	R-6.0

Printers

Since Osborne owners have WordStar™, compatibility is a key issue. You can install WordStar for most printers, or your dealer can, but find out about this before you buy a printer. You can use either parallel or RS-232C (serial) interfaces, but we suggest parallel for most interfacing, using the IEEE488 port.

C. ITOH

Prowriter

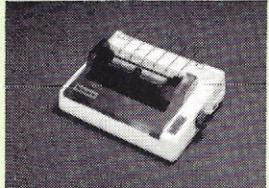

Reviewers laud the **Prowriter's** speed (120 cps), the buffer (1.5K), character sets (5 fonts) and graphics (160x144 dpi). The **Prowriter 2** has the same specs, but in a 132 column format. Because delivery is slow nationwide, the **Prowriter** has become "The Printer Worth Waiting For..."

Prowriter \$399.88
Prowriter 2 \$734.88

STAR MICRONICS

Gemini 10X/15

Gemini 10X (a new version) features 120 cps, 120 x 144 dpi, 5 fonts (w/italics) and a 2.2K buffer. It's Epson code compatible too. **Gemini** comes with tractors & uses plain spool ribbons. The **Gemini 15** is the 132 column version.

Gemini 10 \$339.88
Gemini 15 \$499.88

OKIDATA

Microline Series

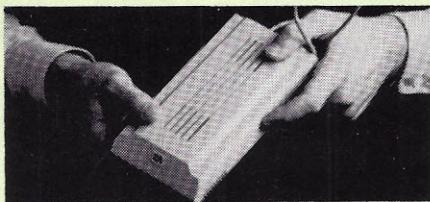

Microline 82As & 83As are data crunchers with 120 cps and optional dot-addressable graphics ROM. They come with both parallel & RS-232C interface (up to 1200 baud).

The **Microline 92 & 93** are text processors with 160 cps draft mode, a 40cps correspondence mode & the graphics included.

Microline 82A \$419.88
82A/92 Tractor \$59.88
Microline 83A \$679.88
Microline 92 \$524.88
w/RS 232C \$634.88
Microline 93 \$884.88
w/RS-232C \$994.88

US Robotics Courier Modem

\$429.88 UPS DELIVERED

An exceptional value for a 1200 baud modem. The **Courier** is a direct connect originate/answer type modem with 0-300 & 1200 baud capability (Bell 212A compatible). Features include auto dial, auto answer, auto mode and auto speed select, full & half duplex (local echo), DTR override, RS-232C pins 2 & 3 reversible & audio phone line monitor. Single button operation makes the **Courier** very easy to use. Comes with a DB-9 modem cable for the Osborne, powerful communications software (\$80 value), power supply & modular telephone cable.

We sell other dot matrix printers, including the **Anadex Series**, **Centronics Series**, the **Epson Series**, the **IDS Prism Series** & the **Mannesmann Tally 160-L**.

Letter-Quality

C. ITOH

Starwriter

The **Starwriter** uses Diablo code, wheels & ribbons, has 132 columns, a 40 cps print speed, 1/48" line space & 1/120" horizontal spacing—ideal for proportional modes. Parallel or RS-232C interfacing. (For real speed freaks, there's the **Printmaster**, at 55 cps. Same specs as above.)

Starwriter \$1379.88
Printmaster \$1679.88

SILVER REED

EXP-550

Why buy a Transtar when you can buy from the guys who make them? The Silver Reed **EXP-550** is a 16 cps, 132 column letter-quality printer with true Diablo emulation, making it compatible with most word processing software. It's ideal for medium duty office work. The **EXP-500** is the 12 cps version.

EXP-550 (Parallel) \$719.88
EXP-550 (RS-232C) \$759.88
EXP-500 (Parallel) \$CALL

We sell a variety of other letter-quality printers, including the **Comrex ComRiter**, the **Diablo 620 & 630**, the **DTC 380Z**, the **NEC 3530 & 7730 Spinwriters**, the **Qume Sprint 11+** & many others.

Software

VersaLedger II

Versa Ledger II can start as a simple checkbook register, expand to a small business bookkeeping system, or develop into a large corporate general ledger system without any additional software. It gives you almost unlimited storage capacity (300–10,000 entries/month), handles multiple checkbooks and ledgers, prints 17 customized accounting reports & comes with a professionally-written 160 page manual designed for first time users.

Versa Ledger II \$121.88

VersaReceivables

Accounts receivable, invoicing, and monthly statement-generating system. Tracks past due accounts & provides automatic billing for them. Prints all necessary statements, invoices, and summary reports, and can be linked to Versa Ledger II and Versa Inventory.

VersaReceivables \$84.88

VersaPayables

Track current and aged payables. Maintains a complete record on each vendor. Print checks, check registers, vouchers, transaction reports, aged payables report, vendor reports, etc.

VersaPayables \$84.88

VersaPayroll

Maintains government & employee records. Performs payroll calculations, with totals displayed on-screen.

VersaPayroll \$84.88

VersaInventory

Tracks items in stock, out of stock, on backorder, etc. Stores sales and pricing data, alerts you when an item falls below a present reorder point, and allows you to enter and print invoices directly or to link it with Versa Receivables system. Prints all needed inventory listings, reports of items below the reorder point, inventory value reports, period and year-to-date sales reports, price lists, inventory checklists, etc.

VersaInventory \$84.88

Business Pac 100

Contains 100 ready to run business programs & subroutines too numerous to list in full. Programs like Interest Apportionment by the Rule of 78, Breakeven analysis, Cash flow vs depreciation, Mortgage amortization, Rate of return on investment with variable inflows—so many that if you only use one or two of them, you've got your money's worth. Comes complete with documentation.

Business Pac 100 \$121.88

Information/Orders:
(603) 881-9855

Orders Only: (800) 343-0726

No Hidden Charges:

We pay UPS ground shipping on all our orders, and we never charge extra for credit cards. We accept CODs & add a \$10 fee per order. We have a \$50 minimum order. Personal checks are cleared in 3 weeks.

All our equipment is shipped factoryfresh, with full warranties. We're authorized for warranty work on a number of printers, & we also offer extended warranty plans for those printers.

Sorry, we cannot accept open POs or extend credit/terms at these prices. APO and foreign orders are not accepted. We prepared this ad in April, & prices do change, so call to verify them.

dBASE IITM made easy!

QUICKCODETM

The dBASE II Program Generator

Now dBASE II is made easy with Quickcode by Fox & Geller. QUICKCODE is a program generator, a computer program which writes computer programs.

FAST AND SIMPLE

With QUICKCODE you can generate a customer database in 5 minutes. It's that fast. All you have to do is draw your data entry form on the screen. It's that simple!

NO PROGRAMMING REQUIRED

QUICKCODE writes concise programs to set up and maintain any type of database. And the wide range of programs cover everything from printing mailing labels and form letters, to programs that let you select records based on your own requirements. There are even four new data types that are not available with dBASE II alone.

YOU CONTROL

And since you work directly with your information at your own speed and your own style, you maintain complete control. Telling your computer what to do has never been so easy.

Call us at (201)794-8883

QUICKCODE, Absolutely the most powerful program generator you've ever seen. Definitely the easiest to use.

Ask your dealer for more information on QUICKCODE and all the other exciting new products from Fox & Geller.

Reviews

Transtar 130

In the past I have taken printer manufacturers to task for not providing installation application notes and word processing instructions. The typical manual gives every indication that word processing has not yet been invented, and that the printer's primary use is to merely churn out page after page of data from program runs.

For the novice user, deciphering Egyptian hieroglyphics would be easier compared to understanding printer control codes, signal definitions, and hexadecimal gobblede-gook. The end user should be provided with clear, concise information on: 1) how the printer connects to the computer, and 2) how WordStar is installed for full printer capabilities.

With that in mind, I spent a month examining and reviewing the *Transtar 130* daisy wheel printer and the marketing/support philosophy behind the product. I found the Transtar 130 to be a first class product backed by excellent company support.

The first feature that struck me about this \$895 18 cps daisy wheel printer was its appearance. The 130 is sturdy and fairly heavy (31 lbs)—it's not at all flimsily or cheaply built. I liked the low-profile design and surprisingly quiet print operations; inexpensive daisy wheel printers tend to be unnervingly noisy.

Transtar added a convenient "autoload" function that loads single sheet paper to one of four selectable positions, something I have not yet seen in other daisy wheel printers.

In a unique move for daisy wheels under \$1000, the Transtar 130 was coded for Diablo compatibility. Simply stated, by installing WordStar as a Diablo 1610/1620 using the INSTALL program (takes less than

30 seconds), the following features are accessed:

- bi-directional printing
- true super/subscripting
- true 1/120th offset boldfacing
- micro-justification
- incremental vertical and horizontal motions

The parallel 130 uses the widely distributed Centronics cable for "plug and go" interfacing. The serial model interfacing is equally convenient: A standard RS232 cable is all that is required. Hardware handshaking is performed inside the printer in order to eliminate the bother of protocols, swapping wires for reverse channeling, or buffer overflows.

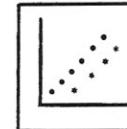

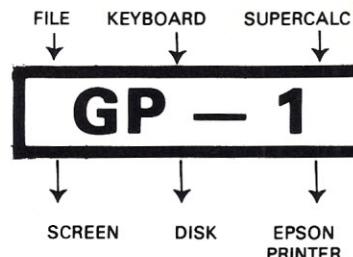

Other miscellaneous features are:

- 10 or 12 switch selectable pitches
- proportional spacing (if and when MicroPro releases it for WordStar)
- optional \$150 tractor feed
- six month warranty

The printer did everything it was supposed to, but I did uncover one area for improvement: the paper entry pathways did not provide enough clearance for paper movement. Several times (a dozen or so), single sheet paper wrapped around the rubber platen or jammed and crinkled as it exited from the printer. It usually happened when I was in a hurry; perhaps an argument could be made that "operator error" was to blame. However, I felt that sound shielding deflected the top edge of the paper not allowing it to exit smoothly at natural angles. Of course, tractor feeding would eliminate this problem.

The most impressive component of this remarkable printer is the support provided by Transtar. Transtar sends to dealers step-by-step application notes detailing how SETUP and INSTALL are used. To further ensure end user satisfac-

tion, Transtar makes it difficult for mail-order marketing of its printers. Transtar products are sold only to retailers/dealers that have "face-to-face" customer contact and provide "complete professional product support—including on-site technical support, training and installation," says Dennis Eckert, Product Specialist for Transtar. With Transtar providing the application notes and easily interfaced printer, the dealer's task should not be terribly difficult.

Says Transtar's president Dick Lawrence, "The user needs support from qualified, trained personnel to get the most out of their purchase. Most suppliers of peripherals refuse to recognize the necessity of the dealer's value-added function."

Amen, Transtar. Amen.

Brad Baldwin

The touch of Touchtyp

"ff jj ff jj fj fj dd ks ds kk..." tapped my 13-year-old son on the keyboard of our Osborne.

"ff jj ff jj fj fj dd kk dd kk..." replied the Oz. "You should have entered the above. You made 2 errors at the underlined locations."

That's the first exercise in the opening lesson of *Touchtyp*, a touch typing tutor program written in MBASIC, custom-designed for the Osborne and marketed mail order for \$79 by Micro-Art Programmers, 173 Birch Ave., Cayucos, Calif. 93499.

It's very effective. My son is well on the way to becoming an ace at QWERTYUIOP after just a couple of weeks of practice each evening. Except for three minor drawbacks, it's an impeccable program.

Just four days after I ordered it by phone, the program disk arrived with an exceptionally simple and clear manual that's only needed to get started, for the program is entirely menu-driven. Once your working Touchtyp copy is SYS-GEN'd, you load it in Drive B, boot MBASIC in Drive A, type RUN "B:A", and you're off.

It's a well thought-out program with five major subdivisions: Beginners I and II, Intermediate I

and II and Advanced. Beginners focuses on the alphabet and some of the punctuation and control keys. Intermediate teaches numbers and symbols as well as the rest of punctuation and control, and Advanced offers exercises for speed and accuracy. Each subdivision contains eight lessons and takes about half an hour to get through at a pokey beginner's rate.

Each lesson contains a number of exercises. As you complete each exercise, the program repeats it, counting and underlining the places, if any, where you made mistakes. If you make too many blunders, you're urged, "Slow down! Accuracy is more important than speed!" At the end of each subdivision, the program gives you an over-all score with percentage of accuracy.

Two of the three drawbacks are exceedingly minor, and even the third can be lived with. First, if you make more than two mistaken character insertions or deletions in a row, the error checking and display algorithm is upset and the remainder of the lesson will be marked incorrect, even if the rest of the characters are correct.

The second deficiency: The lessons are not timed. The program does not tell you your words-per-minute speed, as do several programs for other brands of computer. It focuses entirely on accuracy.

The third problem can be unsettling when you first come across it. In several places in the Advanced section, the cursor locks solid and won't move, no matter what control character you hit. I hit RESET and dumped the program several times before realizing that the lockups are brief—12 to 15 seconds—and the program resumes normally afterward. But this seemed like a vexatious bug for a program that cost \$79, so I wrote a letter of inquiry to Micro-Art about it. In just a few days a courteous reply came from the company's Arthur Purcilly.

"The problem lies within the limited RAM of the Osborne while running under MBASIC," Purcilly wrote. "MBASIC leaves only about 29K bytes for Touchtyp, which takes another 18K, leaving only 11K for operating the program. All the logic necessary to implement the various reading and checking state-

ments of Touchtyp quickly chews up the rest. So, whenever the program runs into the top of RAM, MBASIC does some housekeeping by dumping old items in memory that are no longer required and then proceeds."

Microsoft's MBASIC compiler would save some 30K of RAM, Purcilly added, and eliminate the problem. But Microsoft would require a \$40 royalty on each program disk distributed, "which would price Touchtyp out of a reasonable area."

Micro-Art is seeking to upgrade the software, Purcilly said, "attempting to incorporate a timed typing drill along with looking at other means to correct the memory overflow problem."

As it exists, however, Touchtyp is a fine value. So long as you are aware of its limitations and the reasons for them, you won't be disappointed.

Henry Kisor

Author's Note: A few weeks after my exchange of letters with Micro-Art, I received in the mail—free—a newly revised Touchtyp diskette and another letter from Purcilly. The Micro-Art software engineers "had been able to nearly eliminate" the memory overflow problem—"the only thing you might notice is a momentary hesitation in a long while!" I gave the diskette a try, and it does indeed work much better. My already high opinion of this program and its marketer goes up a couple of notches.—H.K.

Fun and games with your Osborne

I am a lawyer, an editor, and a freelance writer. But deep inside, I'm just a kid. When I'm bleary-eyed from hours of slaving over my hot keyboard—dizzy with dozens of WordStar commands—I love to relax with a good video game. And now, even with my businesslike, no-nonsense Osborne, I can.

The people at Portable Software have designed about a dozen action games for the Osborne computer. All make good use of the Osborne's graphics capabilities. I have had the pleasure of playing a number of

them. Here are my impressions:

Acid Rain: This game doesn't look like much when you start out, but it's remarkably challenging. You control a blinking square cursor with the numeric keypad. Pressing number 8 moves you straight up, and 2 moves you down. Four and 6 move you left and right, and 1, 3, 7, and 9 allow diagonal movement.

Your job is to prevent the acid raindrops (represented by dots, and then asterisks—acid snowflakes?) from hitting the ground. You stop a drop by intercepting it with your cursor. Pretty soon, you're dashing desperately all over the screen, as the rain falls thicker and faster. Acid Rain can provide many hours of fun.

Ozzyman: Here's the Osborne version of the old favorite, Pac-Man. Move your oval cursor through the maze with your computer's arrow keys. You're chased by little monsters (conveniently represented by letter M's). When you chomp through a power pellet, the M's change into E's (for "edible"?), and a timer counts down the seconds remaining in which to gobble them up. The high-resolution graphics are excellent. I highly recommend Ozzyman for the kid in each of us.

Catacomb: You are descending through various levels of the aliens' nest. Touch the walls or any of the numerous obstacles crowding the passage, and it's curtains for you. Pick up the aliens' eggs for extra points, and the medicine vials for additional lives. Steer yourself through the catacomb maze with the numeric keypad, as in Acid Rain. Catacomb is challenging and amusing. I enjoy it immensely.

Survivor: You are an oval on a grid that's littered with dangerous obstacles (bright rectangles) and peopled with Sandroids (black rectangles). Sandroids are vicious—they'll come after you relentlessly. But they're not too bright; they'll run right into any obstacles in their way and be destroyed. All you have to do is stay alive long enough for all the Sandroids to bite the dust. That requires a lot of frenzied action with the keyboard's arrow keys.

Even at its more challenging levels, Survivor is a rather simplistic game. It's enjoyable at the outset,

READY TO RUN

**OSBORNE
& ASSOCIATES**

ACCOUNTING PACKAGE

What's so unique about our accounting package? It works.

When you run this Osborne & Associates Accounting Package on your Osborne 1⁺, it won't need any changes or modifications. It is specifically modified for the Osborne 1⁺. When we say it's ready to run, it's ready to run.

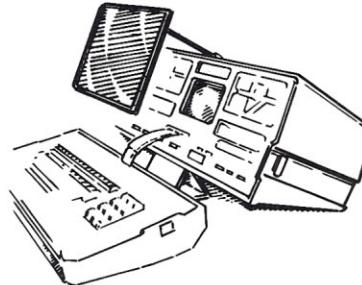

Don't be fooled by less expensive packages that "work" on the Osborne⁺. They don't. They all require changes and modifications. All you need to do with our accounting package is use it.

The complete package includes General Ledger, Accounts Receivable, Accounts Payable, and Payroll with Job Costing, and sells for \$600. (Specify single or double density.) It's unique—it works. To order, send your check to:

(305)584-6500

but its appeal wears thin after some repetition. That can be said of any video game that's overplayed, of course; but Survivor offers a bit less variety than most.

Valor: If Survivor is a bit too simple, Valor is a bit too complicated. You run through a maze (they call it a level in an infinitely tall tower) using your arrow keys. Four robots try to do you in, but you can shoot back with your space bar. You can dodge into boxes that will relocate you randomly across the maze, and you can also escape to a higher level if you love danger. Finally, a "challenge" occasionally appears on the screen. Capture it and the maze is replaced by a question or skill test, which can earn you bonus points.

Valor is an exciting action game, but it can be frustrating. The robots move extremely fast and randomly, so it's very hard to draw a bead on them before they zap you. Still, I recommend Valor heartily for its action.

Trapper: Here is one of Portable Software's brain games. It's for two players. Each is represented by his initial on a blank, bordered screen. The object is to move your initial around the screen, leaving a trail of initials behind you, in an effort to trap your opponent without running into the border or your own trail. You need quick wits, quick fingers, and a clever strategy to box in your opponent. Anyone who saw the movie "Tron" or has played its video-game spin-off will recognize Trapper as the Ozzy version of the motorcycle race. Trapper does not offer the graphics and action of the other games reviewed here. What it does offer is a challenge to your wits and speed—and your friend's.

All these games, and several others, are available from Portable Software, 216 Penn Avenue, Oxford, Pennsylvania 19363 (215) 932-5515 (catalog available). They're quite reasonably priced; most are under \$20. It's nice to know that after you've had enough of your Osborne's great business and professional applications, you can now enjoy some fun and games, too.

Jonathan Plutchok

Space Raiders

Space Raiders is the newest offering from the Portable Software people, who have written a number of other amusing games for the Osborne. The Osborne's graphics are used to provide a viewscreen into space from your seat at the controls of the space ship Defiant. As you turn to lock your crosshairs onto a Klingon fighter (which appears as a bright rectangle), you see the stars panning across the screen. Engage your warp drives, and the stars begin rushing past your sights. The screen also displays your position and heading, the convoy's position, and your fuel and shield energy levels at all times. Press a key, and your viewscreen is replaced by a damage report on all your major systems. (One tiny question: Why did this game's designers choose to portray stars as large ovals? Asterisks would have looked nicer.)

Space Raiders requires you to navigate through three-dimensional space. To get where you want to go, your onboard computer can give you theta and phi (up-and-down and right-and-left) headings to follow. Your XYZ coordinates are constantly displayed. So are the enemy convoy's; but since it is in motion, its coordinates and your theta and phi headings are constantly changing. Even if you use a hyperspace transfer to flash you to the convoy's sector of the galaxy, you must still navigate to find and battle the Klingon fighters.

The result is that navigation with *Space Raiders* is very difficult. This is not just a star wars shoot-'em-up; *Space Raiders* challenges you intellectually. It takes a lot of quick brainwork to find your way around deep space. I have played *Star Raiders* on the Atari 800 computer. That game, which is similar to *Space Raiders*, offers you a galactic map which plots you and your enemy's locations. You can hyperwarp from one grid sector to another with ease. You can't do that in *Space Raiders*.

Space Raiders offers thrills to which Osborne users may be unaccustomed. It's exciting and stimulating. I have found, however, that its intellectual challenges some-

times get in the way of its enjoyment. I am sure that with practice, I will eventually progress beyond the "novice" level! But it can be frustrating to watch my starship spin aimlessly through space, taking direct Klingon hits until it is destroyed, while I try to figure out how to turn and fire at my attackers.

I heartily recommend Space Raiders to all Osborne users who have tired of WordStar, SuperCalc, dBase II, etc.—especially the more mathematically-oriented among you. The Portable Software company (216 Penn Avenue, Oxford, PA 19363 (215) 932-5515) is to be commended for bringing action and adventure to the business-minded Osborne computer. Price: \$29.95.

Jonathan Plutchok

Jonathan Plutchok (Forest Hills, New York) is an attorney, editor of several financial planning newsletters, and free-lance writer. He loves video games and his Osborne.

Money Maestro

A local financial institution advertises that they provide customers with a personal banker for a minimum deposit of \$2,500; *Money Maestro* (MM to friends) serves as my personal banker—at about a tenth of that cost.

MM is a very user friendly personal (or small business) finance package developed by InnoSys Inc. and licensed as approved OCC software. Happily, one need know little about either finance or computers to utilize the program. Detailed, occasionally witty prompts and explanations (formatted to the O-1's 52 column screen) appear whenever "?" is entered. A tutorial walks the new user through various options and leaves him/her ready to customize the package to personal needs.

MM has many features but the three most useful are a) check book balancing; b) budgeting help; and c) end-of-the-year tax report. A few minutes at the end of each month with MM leaves one with a clear (if often somber) picture of personal finances. The user can thus profit from past mistakes (what categories of expenses show excess-

sive deficits over budgeted figures?) and correct those excesses, will-power permitting.

The price for MM's friendliness is speed. It takes a full minute after booting the program before the main menu of 18 options appears (see menu listing below). However, abbreviated and multiple commands permit the advanced user to prod MM into faster action. Remembering the hours (days) spent running down information for tax returns, I consider MM a whiz for speed by comparison. If you're neither a financial nor programming genius, you'll also appreciate MM's patient, sometimes whimsical help in organizing your personal finances. After all, how many bankers have you met with a sense of humor? PS: Don't forget to deduct MM's cost from your taxes.

Money Maestro Main Menu

What do you want to do today:

- 1 to pay bills or make deposits
- 2 to list your check register
- 3 to list your categories
- 4 to list your payees
- 5 to reconcile your checkbook
- 6 to give you detail for a given category
- 7 to change your budget
- 8 to reset everything to start a new year
- 9 to give you payments to a particular payee
- 10 to add new payees
- 11 to add new category numbers
- 12 to create or modify a stockpile of bills
- 13 to pay bills from a stockpile file
- 14 to organize a stockpile of bills for payment
- 15 for a tax report
- 16 to list your budget status
- 17 to set your screen size
- 18 to change today's date from mm/dd/yy

Now enter a number, "?", or "END" followed by RETURN.

We listened.

We listened harder.

Introducing the new Osborne® Executive Series.

We listened when you told us you wanted a personal business computer.

We delivered the Osborne 1.

And in the two years since its introduction, the Osborne 1 has become the largest selling portable business computer on earth.

We listened harder.

The result is the new Osborne Executive Series. Consider these new advantages:

□ A big, 80-column, eye-easy amber display lets you see more of the information you're using, with less effort. □ Memory is expanded, for larger spreadsheets. □ The new Executive Series now includes a database system—Personal Pearl™ (That's in addition to an already formidable list of standard Osborne software, including word processing and electronic spreadsheets.) □ Terminal

Emulation provides access to information stored on other computers. □ IBM Personal Computer™ compatibility (on the Executive 2) lets you use software packages designed for the IBM system.

And there's much more.

Add up the value of all the hardware features and software systems included with either the Executive or Executive 2 and you will see that the sticker price is one of the incredible bargains available in personal computing.

Visit your local authorized Osborne dealer. Once again, Osborne has set the standard for portable business computers.

For the name of your nearest Osborne dealer, dial (800) 772-3545 ext. 905 (in California); (800) 227-1617 ext. 905 (outside California).

COMPUTER CORPORATION

New Products

Saving space

A clear plexiglass **desktop computer** stand has recently been released by SGW Enterprises. Retailing at \$34.95, the stand is designed for use with detached keyboard computers like the Osborne 1. It lifts the computer body to a better viewing position, and allows both keyboard positioning and storage after use.

SGW also offers plexiglass desktop printer stands which fit popular models. Contact the company for a free catalog of products selected for owners of small computers.

SGW Enterprises
722-J Genevieve Street
Solana Beach, CA 92075

Rolling in dough

The high-rolling commodity market provides a playing field for the hopeful **Tycoon**, via a new recreational/educational program of the same name recently released by Blue Chip Software.

Tycoon, designed for the same people who use Blue Chip's stock market simulation "Millionaire," is said to provide an entertaining and realistic simulation of the commodities market, as well as a risk-free learning experience. It also includes a built-in program generator which allows users to create new scenarios of the simulation at any time.

Versions on CP/M will be available as soon as demand warrants. Those interested should contact either their dealer or Blue Chip Software. Cost is \$99.95

Blue Chip Software
19824 Ventura Blvd., Suite 125
Woodland Hills, CA 91364

Menu-driven regression

A conversational, menu-driven regression program for the analysis of economic data, the **Econometric Analysis Program**, has been released by the Cornell Consulting Group. Written in MBASIC for use on the Osborne 1, the program displays (and optionally prints) regression coefficients, an ANOVA table, correlation and variance co-variance matrices, residuals plot, and a comprehensive array of regression statistics including Durbin-Watson, Durbin H, Chow F (stability) and Goldfield-Quandt F (heteroscedasticity).

The program uses double precision format and is supplied on a 5 1/4-inch diskette. The diskette also contains a second regression program which fits five different func-

tional forms to observations of two variables.

The diskette with manual is priced at \$175. The manual is available separately for \$7.50 which is credited toward purchase of the diskette. Write for information:

Cornell Consulting Group,
Inc.

Falls Church, VA 22042

Superfile system 3

The manufacturers of Superfile have added **Superfile System 3** to their line of text management software. FYI, Inc., says the new product offers easy updating and automatic re-indexing of up to 65,000 records per data base. Each free format, variable length record can have up to 500 of the

user's own key words as descriptors, with a maximum of 32,000 key words per data base.

Superfile System 3 includes another program **Post Haste**, which works in conjunction with either Superfile System 3 or Micropro's MailMerge to allow formatting and printing of mailing labels, envelopes, membership lists and other information retrieved from system searches. It sorts alphabetically or by zip code. The package comes with a 30-day money-back guar-

antee. Hardware requirements are Z-80 CPU with CP/M 2.x, 2 disk drives or hard disk. It is available in most formats. Price is \$295.

Sugar, sugar

A circuits analysis program for electrical engineers called **Sugar I** is now available from CGS, Inc.

Written for the Osborne 1 and adaptable to any CP/M operating system, it utilizes flow graph theory to realize poles and zeros of a transfer function that are determined from the circuit topological description. This function is utilized to determine frequency response, impulse response, step response and component sensitivity.

Sugar II, a DC oriented circuit analysis program, will be introduced during the fourth quarter of 1983. **Sugar III**, a multivalued logic simulation program, will be introduced during the first quarter of 1984.

THE ORGANIZERS® by APTEK®

Already in great demand, the Organizers are made of a special, textured high-impact plastic and offer you an exceptional combination of innovative design, dust-free maintenance, and contemporary styling—at a remarkably affordable price!

COMPUTER STAND

Designed for the Osborne® micro-computer with a built-in shelf for your system's disks and manuals providing additional storage room for computer-related supplies. Elevates your screen for reduced glare and eye strain. (Can also double as MX-100 type printer stand.)

APTEK 221 only **\$29.50**

PRINTER STAND

(not shown)

A hard-working accessory for all MX-80 type printers. Includes a built-in shelf and enough storage room under the printer to store a full 4" of paper. The finest printer stand on the market today!

APTEK 216 only **\$27.50**

FLOPPY DISK RACK

An invaluable addition to any micro-computer system. Attractive and durable with a hinged acrylic cover for maximum disk protection. Reduces dust-related disk errors! Designed for 5" disks.

APTEK 505 only **\$34.50**

COVERED PRINTER STAND

Offers all the benefits and features of our Small Printer Stand plus a tough acrylic cover for dust protection. Acoustic foam and special padding reduce bothersome printer noise. A valuable accessory!

APTEK 320 (fits MX-80) only **\$97.00**

APTEK 325 (fits MX-100) only **\$113.00**

MONITOR STAND

This stylish and extremely well crafted Organizer is just what your system needs. Holds monitor securely at eye level for easier reading and reduced glare. Saves valuable desk space.

APTEK 410 only **\$17.50**

Send check or money order to Apogee Designs Ltd., 3100 Fallscliff Rd., Baltimore, MD. 21211. Phone (301) 235-7523. Master Card and Visa accepted. Hyper typing

A new software package from Digital Marketing may help those two-fingered typists who find their computer literacy hindered.

HyperTyper by Summit Software, retailing for \$49.95, is said to be perfect for "introductory computer courses" since it runs on Osborne 1, IBM's PC and Apple II, and can be used in the office for typing tests and/or practice drills.

Children can also use HyperTyper as a game, say company spokesmen, while learning typing proficiency. Information can be obtained from local computer dealers or by calling Digital Marketing's toll free number: (800) 826-2222.

Bethlehem, PA 18017

Endorsed adventuring

The first **Adventure** game created by Will Crowther and Don Woods, has been recreated into the Osborne 1 format by the Software Toolworks and endorsed by the authors.

Invented in 1975, the game is modeled after a Kentucky cavern named Colossal Cave which Crowther explored as an amateur spelunker. Woods expanded it to its now well-known form, and the Toolworks version contains additional rooms and treasures as well as an expanded end game. Players achieving the maximum score may send for a free Certificate of Wizardry bearing Crowther's and Wood's signatures.

The Toolworks version is available through retailers or from the company for \$19.95 plus \$2 shipping on 8-inch CP/M disk as well as 5-inch Osborne 1 format.

The Software Toolworks
15233 Ventura Boulevard,
Suite 1118

APPROVED BY OCC, FROM INFOCOM INC:

Zorkers under the rug

Putting one's nose to the tunnel and getting down—as in underground—is the beginning of adventure in the Interlogic "prose adventure" by Infocom called **Zork I**.

The Great Underground Empire is populated with lots of desirable gold and undesirable creatures

who want it, including such characters as the Wizard of Froozz and a thief. A host of objects, twists, and turns within the labyrinth and vehicles that transport players to "mysterious regions inaccessible by foot" keep the quest for riches an intriguing one.

Zork I and its companions **Zork II** and **III** communicate in complete sentences rather than two-word commands, and they are said to have the "largest vocabulary and widest range of command options in the genre." It is available from Osborne dealers. Suggested retail price is \$49.95 for each Zork game.

Not so elementary, watson

You have only 12 hours to decide who killed Marshall Ropner. That's some **Deadline** for all you would-be Sherlock Holmeses, and another challenge game from Infocom. The package is full of

clues, including samples of the death drug, Ebullion, lab reports and interviews with suspects.

The two-disk game takes specific commands such as "analyze," "follow," "examine," and can help you talk to suspects in sentences like, "Jim, who is the butler?" Our resident *Portable Companion* detective buff hasn't solved the murder yet. **Deadline** is available from Osborne dealers, and suggested retail is \$59.95.

New Product information is derived from press releases sent to *The Portable Companion* by the producing companies. Statements of fact or opinion expressed in the New Product announcements that appear in this magazine are those of the producing company and have not been checked for accuracy by Osborne Computer Corporation. Before purchasing any of the products listed in this section, you are advised to check the validity of all claims made for the product.

SOFTWARE FOR OSBORNE 1

SBACOUNT: Accounting for small business. Tracks all income & outgo, prints checks, posts chart of accounts. Prints chart of accounts, trial balance, profit and loss statement, & check ledger. Reconciles and prints reconciliation. Generates an Income & Expense journal for audit purposes. **ONLY \$79.00**

MBACOUNT: Accounting for small business. Full general ledger (20 asset, 20 liability, 20 income, 30 expense & 10 capital accounts all user assigned) PLUS all the features of SBACOUNT as above. **ONLY \$89.00**

PROFBILL: Automatic bookkeeping & invoicing for Doctors, Lawyers and other professional people who invoice at various hourly rates. Will handle up to nine partners/employees. Prints invoice or saves for future billing. **ONLY \$89.00**

MAILIST: Mailing list, customer handling, filing program, ten data fields per customer. 8 character cust # - user (or dated program) assigned, sorts by most fields, Add, delete or modify any record. Prints all or part on 1, 2 or 3-up labels on 80 column printer. **ONLY \$89.00**

FINANCE: Personal financial program. Prints checks, posts amount to selected budget category, posts debits and deposits, prints check ledger, reconciles and prints reconciliation statement. Similar program for charge cards. Extracts and prints list of expenditures in selected budget categories. **ONLY \$79.00**

TOUCHTYP: Touch typing course, Beginning, Intermediate & Advanced. Tests and displays typos and displays final score. **ONLY \$79.00**

STANFORM: Need to fill out standard or non-standard forms? This program generates programs for printing data in the proper location on invoices, gov't forms, insurance claims, any form that will fit into your printer. **ONLY \$79.00**

MSBCHART: Prints MICROSOFT BASIC programs, prints cross reference list of all referenced lines, prints list of variables cross referenced to each line where used. A godsend if you modify or debug Mbasic programs. **ONLY \$79.00**

Price includes disc, manual, and shipment next working day by first class mail. Mail in your order today or request detailed program listing. Better yet, if using accepted credit card, phone your order or data request to our 7 day, 24 hour phone service. Californians must add 6% to all prices.

Puzzler

How nimble are you?

This month's *Puzzler* offers a challenge—a challenge for you to decipher the mathematical logic and strategy of a game 5000 years old, and then program it into a computerized version complete with graphics.

The non-computer game setup consists of placing 4 rows of match sticks in groups of 7, 5, 3, and 1. Two combatants take turns picking any number of sticks from a single row. An entire row can be picked; the player picking the last stick loses. The drawings illustrate an example game.

With origins in China, this game is considered the most ancient of all two player tests of logic.

It's known by several names, but NIM (short for NIMble?) is the designated title bestowed upon it by Harvard mathematician Charles Leonard Bouton back in 1901. However, it wasn't until 1962 that NIM reached national prominence when the movie "Last Year at Marienbad" was released and a scene featuring NIM was shown; NIM became an instant hit on the cocktail circuit.

Little was known then and now about Bouton's winning strategy using move combinations based on binary logic. That is where you come in.

Your mission, should you decide to accept it, is to unlock the winning algorithm and incorporate it into a NIM computer game using the program language of your choice. Of course, Bouton performed his research without computers but we need not be so neanderthal (said with nose in air).

Design the game to be played against the computer with alternating first moves. As Bouton discovered, the player going first has an advantage, or disadvantage (I'm not telling which—it's part of your sleuthing to find out). Make your game appealing by adding screen graphics, optional (toggle on/off) printer subroutines, and humor.

In the next *Puzzler*, we'll reveal the winning combinations and concepts behind the moves. By that time, we hope you have devised a solution on your own. We want you to say, "After 5000 years, I figured out how to play NIM to WIN!"

Brad Baldwin

Writers! We've taken the paperwork out of writing. The Osborne® Personal Business Computer. And WORD·PAC.

Author Peter DeVries once said, "I love writing. It's the paperwork I can't stand."

The Osborne Personal Business Computer is an outstanding writer's system, because it automates the paperwork of writing. Quickly and easily.

Only \$1995 delivers a complete computer including WORDSTAR® software for extensive word processing. The portable Osborne system fits the work style of writers (you can take it wherever you want), yet the system compares with dedicated word processors costing several times more.

Communications options connect you to a variety of information banks, for research or brainstorming, or for shipping documents electronically, over telephone lines.

And now, the WORD·PAC brings even more efficiency, accuracy, speed and fun to

the writer using the Osborne Computer.

Five packages to check your spelling, analyze your grammar, handle footnoting, indexing, and even arithmetic.

Osborne. The best thing for writing since the invention of royalties.

Wrap-Up

Modem Fever

"I got my modem! Oh, God, I got my modem!"

My hands shook as I gently broke off eight plastic tabs and slowly inserted the OCC modem into Shiela, my OCC portable powerhouse.

"The world will be mine! The whole cockeyed world can be brought right into this room!"
I started choking down tiny chunks of the manual...

...Amcall, baud rate, parity. What?

Plug in the ribbon cable... where's the ribbon cable? Oh-oh. Modem's in upside down. Can't get the darned thing out. Nothing to hold on to. Fingernail clipper—not enough leverage. Screwdriver—too much leverage. Pair of table forks—almost perfect. Just tears the edges a little.

OK. Ready to play....

"Oh, be quiet. I'll come to bed when I finish reading this MB 871/2cq{7HM9mPMXmB6m {7HM9mPe*^\\Mdma7?DXRCmM'm{7JxmM9mPMHMXmJM'{>~2..."

"No, I didn't call the phone company and tell them I put in a modem. No, I don't think it's my fault. No, I can't call the phone company at 2:30 on a Saturday morning.

"No, I don't think six o'clock in the morning is too soon to start playing with Shiela; yes, the phone is working again, and yes, I'll come to breakfast as soon as it's on the table..."

"No, I don't think six o'clock at night is too long to go without eating, and of course the eggs are cold.

"OK, OK. I'll stop reading the manuals. Oh-oh. It's gone crazy again. Look at that mess!

"No. I didn't do it. I know I didn't do it. But the line's dead, anyway.

"How the hell can I call them when the line's dead?"

NEXT MORNING

The telephone ringing pulled me out of bed by the ears.

"This is the telephone repairman."

"Thank God!"

"Where were you when I pounded on the door? Didn't you hear your dog barking?"

"No. Well. Uh. I must've been sleeping. I'm a writer. I work late. Uh. Well. Uh. Is it about the modem?"

"The what?"

"Never mind. I'll let you in. I won't try to hide anything. Just let me get dressed first."

Over a cup of coffee, I received absolution from my unearned guilt. It was a moisture-shorted line between the pole and the house. I also received a warning.

"You'll have to put a data line in eventually. A voice line just won't be able to accommodate you."

"Wow!" I said.

He shook his head and left. I ran for the phone.

"Hello, Sears Business Center?"

They were the reason I went Osborne in the first place. Figured I could trust Sears.

"You haven't the faintest idea? Bring the computer and printer both in?"

Forty miles and an hour later.

"Leave it?"

Another forty miles, another hour. The phone rang just as I opened the door.

"It's done already? All I have to do is unplug the modem before I use the printer? The computer doesn't know whether to send to the printer or the modem, so it does both? But on page 9 it says to leave it attached. Never mind."

Another forty miles, another hour and a half. Rush hour.

"No charge? Gee, that's super! Tell Osborne to get its stuff together? Gee."

Another forty miles, another forty minutes. Same rush hour traffic. Ahhh. Home again with Shiela. Better do the paper work. Modem serial number. Oh-oh. Have to take it out again. Hooray for forks.

Getting sleepy. Wonder where does it say how to hang up out of autodial? Oh, well.

"Yeah, yeah. I just pulled the plug. I'm coming, I'm coming."

Introducing the Most Powerful Business Software Ever!

TRS-80™ (Model I, II, III, or 16) • APPLE™ • IBM™ • OSBORNE™ • CP/M™ • XEROX™

The VERSABUSINESS™ Series

Each VERSABUSINESS module can be purchased and used independently, or can be linked in any combination to form a complete, coordinated business system.

VERSPAYABLES™

\$99.95

VERSPAYABLES™ is a complete menu-driven accounts payable, invoicing, and monthly statement-generating system. It keeps track of all information related to who owes you or your company money, and can provide automatic billing for past due accounts. VERSPAYABLES™ prints all necessary statements, invoices, and summary reports and can be linked with VERSALEDGER II™ and VERSAINVENTORY™.

VERSPAYABLES™

\$99.95

VERSPAYABLES™ is designed to keep track of current and aged payables, keeping you in touch with all information regarding how much money your company owes, and to whom. VERSPAYABLES™ maintains a complete record on each vendor, prints checks, check registers, vouchers, transaction reports, aged payables reports, vendor reports, and more. With VERSPAYABLES™, you can even let your computer automatically select which vouchers are to be paid.

VERSPAYROLL™

\$99.95

VERSPAYROLL™ is powerful and sophisticated, but easy to use payroll system that keeps track of all government-required payroll information. Complete employee records are maintained, and all necessary payroll calculations are performed automatically, with totals displayed on screen for operator approval. A payroll can be run totally, automatically, or the operator can intervene to prevent a check from being printed, or to alter information on it. If desired, totals may be posted to the VERSALEDGER II™ system.

VERSAINVENTORY™

\$99.95

VERSAINVENTORY™ is a complete inventory control system that gives you instant access to data on any item. VERSAINVENTORY™ keeps track of all information related to what items are in stock, out of stock, on backorder, etc., stores sales and pricing data, alerts you when an item falls below a preset reorder point, and allows you to enter and print invoices directly or to link with the VERSARECEIVABLES™ system. VERSAINVENTORY™ prints all needed inventory listings, reports of items below reorder point, inventory value reports, period and year-to-date sales reports, price lists, inventory checklists, etc.

VERSALEDGER II™

\$149.95

VERSALEDGER II™ is a complete accounting system that grows as your business grows. VERSALEDGER II™ can be used as a simple personal checkbook register, expanded to a small business bookkeeping system or developed into a large corporate general ledger system **without any additional software**.

- VERSALEDGER II™ gives you almost unlimited storage capacity (300 to 10,000 entries per month, depending on the system),
- stores all check and general ledger information forever,
- prints tractor-feed checks,
- handles multiple checkbooks and general ledgers,
- prints 17 customized accounting reports including check registers, balance sheets, income statements, transaction reports, account listings, etc.

VERSALEDGER II™ comes with a professionally-written 160 page manual designed for first-time users. The VERSALEDGER II™ manual will help you become quickly familiar with VERSALEDGER II™, using complete sample data files supplied on diskette and more than 50 pages of sample printouts.

SATISFACTION GUARANTEED!

Every VERSABUSINESS™ module is guaranteed to outperform all other competitive systems, and at a fraction of their cost. If you are not satisfied with any VERSABUSINESS™ module, you may return it within 30 days for a refund. Manuals for any VERSABUSINESS™ module may be purchased for \$25 each, credited toward a later purchase of that module.

JMM Computer Peripheral Accessories for Osborne®...

These RS232C Serial Cables are especially designed to interface the Osborne 1 computer system to the various serial devices used in the computer industry.

The Centronics printer cable allows the use of the IEEE-488 port as a centronics conformal interface for printers. This cable is 5' long and avoids the need for a serial to parallel interface in the printer.

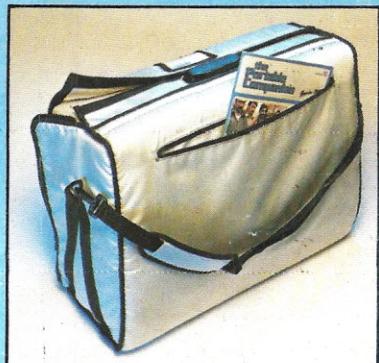

A coaxial type video cable is required for the high data rates transmitted by the Osborne 1. This quality cable enhances the display.

The EXMON II is a combination package and includes the EXMON and a UHF modulator. This allows the use of television sets as monitors without "hard wire" connections to the television set.

The EXMON external monitor adapter is designed for the Osborne 1 computer system, and enables the use of any standard video monitor with the Osborne 1 computer.

Padded carrying case to protect and ease handling and carrying.

JMM Enterprises manufactures and distributes quality interface products for the Osborne 1. We provide Monitors, Printers, and STROBE™ Plotters. An EXMON adapter is also available for your HP-85.

Mastercard & Visa Accepted

The IEEE-488 adaptor cable provides the standard IEEE-488 interface connection to the Osborne 1 computer.

The KEYBOARD EXTENDER cable is intended to increase the freedom of movement for the keyboard of the Osborne 1. This cable plugs into the Osborne 1 keyboard connector and then the keyboard cable plugs into the other end. The standard length is 24".
